## Heatwave Expected To Peak In The Low To Mid 30s After All & Breaking The May Temperature Record...

Well, everyone, we sufficiently called it, and today and the days ahead are about to become reality for our repeatedly repeated forecasts as temperatures are set to hit a very hot 32–34C in the hottest parts of the country and England over the coming days, and also breaking the May record with the even hotter temperatures still to come during next week (32.8°C) and on Monday/Tuesday.

Our public and dated update from 17th May also stated the following correctly in reference to these exact dates and scale of actual temperatures:

"It is also during and around NEXT WEEKEND and around the WEEK starting 25th MAY, when we can see the overall temperature values ramping up into the LOW to MID 30s in the hottest parts of the country and even elsewhere and MANY other parts of the country will also be likely to experience some ABNORMALLY warm to hot temperatures for the time of the year and to also start the summer/June but with those covered 'caveats' from our much earlier and unchanged reports for this summer and the months of June to August below."

<https://www.facebook.com/share/p/18re5F24tT/>

The following updates from 10th May (2 weeks ago) also stated the following for these exact dates:

"In addition to the pending very warm to VERY HOT weather and temperatures, we are also EXPECTING on our part during LATE MAY and for in and around the 'START dates' of MAY 22-25."

<https://www.facebook.com/share/p/15ovoZkECC4/>

Additionally, we also called this at a time when main forecasters were forecasting no higher than 26-27 C for this same period in the following public domain posting below with over 650,000 views on our part:

<https://www.facebook.com/share/p/1C6VJA2vBD/>

The same under fire and an additional posting also stated all the following correctly in reference to this and the exact dates and days of this weekend and into 'next week', for which I was called a 'liar' as their beloved and trusty MO had no such temperatures in place and with significantly lower temperatures for 'after the weekend' and for this 'upcoming week' for which we were saying otherwise...

"However, they are still not quite there (MAIN WEATHER APPS) and on the day, temperatures from around THIS WEEKEND and particularly on SUNDAY and extending up until at least around Thursday or Friday of NEXT WEEK, when we will be likely to see much higher values on the current days in the LOW to MID 30s at the VERY LEAST, or possibly a little higher as this very intense high pressure build sends temperatures soaring for many parts of the country for our exact dates from within multiple updates from much farther ahead once again."
