

EXACTAWEATHER

Drier & Sunny Weather From Sunday & Into Next Week

+ This Week's Errors Explained + Major Storm & Possible 'Wintry Blast' Dates

But When Exactly/Other Important Info . . .

THIS WEEK

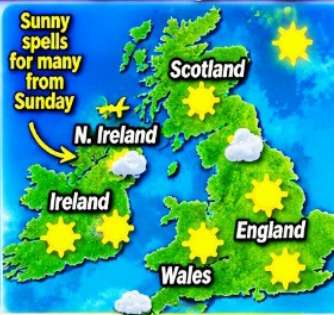

- ✓ More cloud
- ✓ Showers at times
- ✓ Some sunny spells
- ✓ Especially midweek/Thursday (N & W)

WARMER THAN AVERAGE

SUNDAY & INTO NEXT WEEK

- ✓ High pressure influenced
- ✓ Drier & sunnier spells
- ✓ Lighter winds
- ✓ Better for many

Sunny spells for many from Sunday

MIDWEEK / THURSDAY

- ✓ More showery
- ✓ Cloudier at times
- ✓ Especially N & W
- ✓ Before turning wetter later

WEEKEND 17-18 OCTOBER

- ✓ Atlantic-influenced
- ✓ More rain & gales
- ✓ Rougher conditions
- ✓ Unsettled for many

THIS WEEK'S ERRORS EXPLAINED

FORECAST ERROR

- ✓ More cloud and showery conditions than initially expected this week (Mon-Fri).
- ✓ Some of the outlooks for warmer October conditions were too optimistic.
- ✓ It's not very often we have to admit forecast errors, but this week has been one of them!

MAJOR STORM & POSSIBLE 'WINTRY BLAST' DATES

AROUND 19-20 OCTOBER (AND POSSIBLY 19-21 OCTOBER)

- ✓ Major storm likely
- ✓ Potentially wintry on higher ground
- ✓ Latest GFS also shows stormy & wintry for 19-21 Oct
- ✓ Could still shift by a day or two

OUR EARLIER & REPEATED CALLS FOR THESE DATES STILL HOLD STRONG!

Drier & Sunny Weather From Sunday & Into Next Week + This Week's Errors Explained + Major Storm & Possible 'Wintry Blast' Dates . . .

But When Exactly/Other Important Info . . .

High pressure-influenced conditions will bring some cordial changes, lighter winds and sunny spells for many from Sunday and to our overall weather pattern and continuing at times into next week, as featured within some of the very latest GFS runs and our last dated update for this below (our initial wet and windy expectations come forward a day from Saturday/Sunday as did the settled weather from Sunday).

<https://www.facebook.com/share/p/1DHdf7uPfP/>

Unfortunately, despite some very warm and expected daytime temperatures for October on our part and some decent sunny spells at times during this week, the conditions have been far more cloudy and showery than our initial expectations for this past working week of Monday to Friday (not very often we have to admit forecast errors on our part).

Additionally, we will also be likely to see some more showery and cloudy weather being induced during these sunny spells, particularly around midweek or Thursday in some

northern and western areas and before intensifying from the Atlantic-influenced weather later in the week and during the upcoming weekend in these parts (17–18 October).

Importantly, we are then likely to see something majorly stormy and potentially even wintry on higher ground, at the very least for in and around 19–20 October (the following week after next week) and matching our earlier and repeated short-to moderate long-range weather forecasts for this type of occurrence in and around these exact dates (earliest call from ourselves for these dates was in early to mid-July).

Additionally, the very latest GFS run also brings a stormy and potentially even wintry scenario for these same dates of around October 19–21 at present (could still shift by a day or two either way yet, but is similar to our moderate to long range expectations for around these dates).

Apologies regarding the forecast errors this week everyone. Unfortunately, my plate is still quite full at present . . .

My latest MRI scan came back fine on the bit they were examining, and it is likely that I have something like Addison's/Cushing's Disease that can be treated with life-long steroids.

However, as my present luck would have it, the same MRI scan also picked up on an 'Arteriovenous Malformation' in a totally separate part of my brain (very dangerous and has a high bleed rate of around 2–4% per annum), and I am due another scan to pinpoint what happens next.

Thank you to all of you who have sent such kind and heartfelt messages and comments. They are very much appreciated, and hopefully I'll be fully back on my feet soon.

Peace out and much love,

James Madden
