

EXACTAWEATHER

Summer 2026 Review + The Hottest Summer On Record Still To Come!

WE PREDICTED.
IT HAPPENED.
WE DELIVER!

We're extremely pleased with our Summer 2026 long-range forecasts for June, July and August that have also remained largely unchanged projections on our part from as early as **FEBRUARY 2026** (3 MONTHS AHEAD of the start of summer) and a good several months ahead of ANY other existing weather companies or pages or standard/conventional meteorologists...

**UNMATCHED ACCURACY
FROM THIS FAR AHEAD!**

WE ACCURATELY PREDICTED & DEFINED ALL OF THE FOLLOWING (FROM FEBRUARY 2026):

**EXACT DATE OF
LATE JUNE HEAT
& MAJOR HEAT
(Feb 2026)**

**EXACT DATES,
SCALE & DURATION
OF THE BIG
JULY HEATWAVE
(Feb 2026)**

**FURTHER HEAT OR
EXTREME HEAT IN
AUGUST (38.1°C)
BUT WITH VARYING
NORMAL TO WARM
TO HOT TEMPERATURES
(Feb 2026)**

**RECENT AUGUST
THUNDERSTORMS
& FLOODING
+ MORE
TO COME
(Feb 2026)**

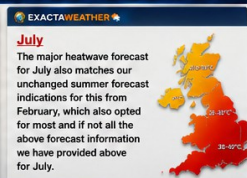

**LAST SUMMER
HURRAH OF WARM
TO HOT TEMPERATURES
FOR LATE AUGUST
FOR THE EXACT DATE
(Feb 2026)**

If any other weather people or their million-pound supercomputers achieved this level of accuracy from this far ahead, you'd be hearing about it everywhere. But because it's us (Exacta Weather), it's ignored or dismissed. They can't argue with our accuracy, so they choose to ignore it or hide behind the "broken clock" excuse.

**READ OUR REPORTS.
PASS YOUR OWN JUDGEMENT.**

FORECASTS MADE MONTHS AHEAD – PROOF THAT SPEAKS FOR ITSELF!

**THE HOTTEST SUMMER
ON RECORD IS
STILL TO COME...**

Summer 2026 Review + The Hottest Summer On Record Still To Come!

We're extremely pleased with the Summer 2026 long-range weather forecasts for this year on our part for June, July and August that have also remained largely unchanged projections on our part from as early as February (3 months ahead of the start of summer) and a good several months ahead of elsewhere or ANY other existing weather companies or pages or standard/conventional meteorologists...

They also accurately defined ALL the following correctly:

The exact date of the late June heat and major heat (Feb 2026) 

The exact dates, scale and duration of the BIG July heatwave (Feb 2026) 

Further heat or extreme heat in August (38.1°C) but with varying normal to warm to hot temperatures (Feb 2026) 

The recent August thunderstorms and flooding + more to come (Feb 2026)

The last summer hurrah of warm to hot temperatures for late August for the exact date

(Feb 26)

Again, had this been any other weather-related people of importance or their million-pound supercomputers making and attaining such accuracy from this far ahead and once again (not a one-off), then you'd be hearing about it left, right and centre, but because it's us (myself/Exacta) it is literally quashed as nothing or no kind of achievement from elsewhere and those who could offer nor do not better themselves but can't actually argue any case on our overall accuracy on this one, and they will therefore choose to ignore it or go with the broken clock analogy to make themselves feel better about their own ineptness (shame I feel and know differently).

Read all our reports for yourself and pass your own judgement, guys, plus not to forget the hottest summer on record on our part that is still to come...

The full autumn and winter 2026/27 forecasts (September–March) are now also available for singular use by instant email delivery below:

<https://exactaweather.com/uk-long-range-weather>

Alternatively, you can also join below via our Advanced Weather Services page for even better value plus much more over a whole year (£14.00 at present for a 12-month all-access pass to all of our services – RETURNING to £20.00 soon).
