

Simple. Effective and
100% Natural

ACNE THERAPY WITH PRF

- Encourages a natural approach to treating acne
- Infiltrates acne pores with PRF
- Minimally invasive
- No drugs
- No chemicals or additives

FAQ

HOW DOES THE ACNE THERAPY WORK?

When tissues are required to heal, they require certain proteins and growth factors that stimulate regeneration. These are naturally found in the human body. Typically, important cells found in blood are platelets (help stimulate growth factor release and regeneration) and white blood cells (help fight infection). PRF utilized a simple blood draw where whole blood is then placed into a centrifugation device to produce up to 6-8 times more regenerative cells and defense fighting cells when compared to whole blood. That means more growth factors, more ways to fight infections, and reduced post-op pain using what is naturally found in the body.

WHAT IS PLATELET RICH FIBRIN (PRF)?

PRF is the most technologically advanced, safest, and effective treatment for regenerating soft tissues including facial acne. By concentrating your body's own white blood cells utilizing the Bio-PRF® protocols, these concentrated platelets and white blood cells will penetrate into acne where a host of white blood cells will fight current infection. No need for drugs, medication or use of added chemicals or by-products.

HOW LONG DOES THE PROCEDURE LAST?

The entire Acne therapy procedure takes between 20-30 minutes. Ask your doctor if you have questions.

IS THE PROCEDURE PAINFUL?

A topical numbing cream is placed over the skin first and thereafter the procedure is virtually painless and relies on a simple blood draw as utilized in everyday blood labs.

NATURAL ACNE THERAPY

PRF AS A NATURAL APPROACH TO ACNE TREATMENT

Platelet Rich Fibrin (PRF) is a technology that uses your body's own natural and powerful healing proteins and concentrated growth factors found within blood to rejuvenate skin, cartilage, bone and various other tissues in the body.

Before and After of a young teenager who was worried about leaving the house owing to her facial texture and severe acne. Several other therapies had not functioned. By activating the body's own defense system using PRF, she was able to rid her severe acne in only 3 short 20 minute appointments.

With a simple blood draw, a concentration of natural growth factors in your own blood can be collected and used to stimulate healing. Following a spin cycle in a Bio-PRF® centrifuge, the liquid component is removed and utilized with a DermaPen device to create micro-channels in the skin only 1-2 mm in depth. Thereafter these channels are filled with supra-concentrations of regenerative cells and leukocytes; the defense fighting white blood cells. Utilizing this strategy allows a super dose of the body's own white blood cells to fight the active infection in acne in a natural way without having to utilize chemicals or drugs.

advanced and natural treatment

Before and After: In many cases, the acne may persist far outside one's teenage years and well into their 30s. In this case, a male patient was treated with PRF and microneedling to obtain full and regenerated skin following therapy with PRF. Note that this approach can also be utilized to smooth deep acne pits and leftover acne scars.
