
 **BIO-PRF LIFT®** WAS DEVELOPED TO ESTABLISH A MULTI-STEP APPROACH UTILIZING VARIOUS PRF MODALITIES TO **UNLEASH** AND **MAXIMIZE** THE NATURAL POTENT **BIOACTIVITY** AND REGENERATIVE CAPACITY OF THE HUMAN BODY WHEN CONCENTRATED **PRECISELY** USING SPECIFIC PROTOCOLS. 

The use of the  Bio-Lift® Protocol is now one of our Signature Treatments offered exclusively at CARE Esthetics® Centers around United States.

Patient's Guide

OVERVIEW

| First came traditional PRP :
Out with the old

Platelet Rich Plasma (PRP) was a first generation platelet concentrate that gained popularity because it could concentrate regenerative cells and growth factors with a simple blood draw that dramatically promoted tissue healing. Despite its popularity in facial esthetics, medicine and dentistry, one of the consistent reported drawbacks was the use of anticoagulants (often derived from animal sources). This was proven to limit the natural regenerative process by preventing clotting (or coagulation).

| Then came PRF :
The next generation with superior technology

By removing these anticoagulants, changing the technology and spin protocols, and modifying the blood-collection tubes, it has since been possible to further extend the natural growth factor delivery in a 100% natural manner with no chemical additives. PRF has since been defined as a 2nd generation platelet concentrate with data demonstrating up to 3 times more positive effects on cellular bioactivity when compared to traditional PRP. Bio-PRF® is an upgraded centrifugation system with protocols that even further improve the regenerative potential of PRF up to 10x.

What is the  Bio-PRF Lift® ?

| Advanced medical science to maximize and rapidly activate facial rejuvenation.

The  Bio-PRF Lift® (Bio-Lift® for short) was developed after years of research to use 100% natural & chemical-free regenerative methods to rapidly stimulate facial rejuvenation.  Bio-Lift® maximizes the regenerative potential of facial tissues utilizing advanced medical science by combining 3 of our most favored patient treatments.

CARE Esthetics® is the FIRST in the world to introduce Bio-PRF® to facial esthetics 

What was exclusive to only medicine is now available in Facial Esthetics

Research on PRF has been widespread in medicine, and has recently been introduced to doctors focused in facial esthetics. PRF utilized with microneedling (DermaPen) has resulted in positive outcomes and proven to induce collagen synthesis when implanted within the superficial layers of skin and the dermis. The PRF technology has the special ability to form a stable blood clot, which provides superior volume enhancement when compared to PRP.

Created by leading field experts and doctors

Dr. Richard Miron and Dr. Catherine Davies launched their best-selling textbook specific to PRF in facial esthetics. Their natural solution to rapidly invigorate the body with concentrates growth and stimulating factors found in blood is the leading solution in the field.

100% NATURAL BIO-LIFT® TREATMENT

| The exclusive  Bio-LIFT® combines 100% natural procedures to rapidly stimulate facial rejuvenation and instantly lift your skin.

It combines 3 special therapies:

- 1 Standard micro needling with PRF
- 2 PRF injections
- 3 Natural facial fillers – longer lasting and uses the Patented Bio-Filler® technology to treat facial deficiencies with the Bio-Heat® technology
