

TESTIMONIAL for Cameo's Severe Upper Respiratory Infection:

Below is Cameo. She is a small 15 year old quarter horse. She had a severe upper respiratory infection which you can clearly tell in the first picture below left. Cameo would not eat the SMZ pills the vet gave her, so the owner started giving her our Rio's Relief Oil.

In the evening of Day One, Cameo's Mom squirted approximately 15 drops of Rio's Relief Oil in her mouth and put 7 drops in her food. On Day Two, she repeated the same procedure and Cameo's infection had almost completely cleared up! (See middle photo below.) On Day Three, she squirted about 10 drops in her mouth and put 7 drops in her food twice daily. On Day Three, there is no sign of nasal discharge and infection! (See picture at right below.)

Cameo's Mom is going to continue with 10 drops in the food twice a day and doesn't need to squirt it in her mouth anymore. We are so thrilled for Cameo!
