The first full Moon of 2025 occurs on the night of Monday, January 13. Look for the January Moon to rise from the eastern horizon around sunset that evening. By midnight, the Wolf Moon glows bright and round overhead. By sunrise, it will disappear into the western horizon. It's thought that January's full Moon came to be known as the Wolf Moon because wolves were more likely to be heard howling at this time. It was traditionally believed that wolves howled due to hunger during winter, but we know today that isn't accurate.
