\*1 Calculated from the center position of the measurement range;

\*2 Tilt test using standard flat mirror at 1kHz sample frequency;

\*3 Measurement of sharp glass edges, verified with a sub-micron positioning accuracy motion platform and laser interferometer as the displacement reference, the spot diameter values correspond to the diameters of small spot/large spot/four-spot pattern;

\*4 Measurement of standard silver-coated mirror, 1kHz without averaging, root mean square deviation of 10,000 continuous data sets;

\*5 Calibration verification using high-precision nanoscale laser interferometer.
