

How to wear the inner cap

1
Check the front and back of the cap.
The side with the seam is the front.

2
Align the center of the seam to the middle of your forehead. Firmly put it down to the nape of your neck.

3
Align the front of the inner cap where the hairline is slightly visible.

4
Now you are ready to put on a wig.

POINT

If you are unable to locate your hairline, please use approximately 3 to 4 fingers above the eyebrows as a guideline.

Velcro tape to secure your wig

We have placed Velcro tape at five points on the surface that comes into contact with the wig - front, back, left, right, and top. You can remove the cover as needed to secure the wig even more firmly.

Non-slip silicone prevents from shifting

We have added non-slip silicone to four points on the back of the product, where it comes into contact with the scalp - at the front, back, left, and right.

Excellent elasticity & water absorption

The material has excellent elasticity and provides a gentle, comfortable fit, so you won't feel tired even after prolonged use. It also uses a highly absorbent material, which effectively absorbs sweat.

M.Wig certified inner cap guarantees quality

This inner cap has passed all certification tests for JIS standards (Japan Industrial Standards), and has received the [M.Wig] certification which cannot be applied for without JIS certification.
