SynkConnect™ is a cardless player tracking solution for Konami's SYNKROS® casino management system that empowers casino players with a variety of secure methods to augment or replace a traditional player loyalty card at a gaming device, including a personal mobile device, fob, room key, and more. SynkConnect opens more opportunities for players to connect and engage with property loyalty programs by allowing several convenient methods of authentication. SynkConnect is a multi-channel cardless solution to reach more players using the technology conveniences already interlaced through the guest experience. SynkConnect also supports QR code validation. Players use their smartphone to scan a uniquely generated QR code on the game screen.

Available Authentication Methods:

- Mobile smartphone
- Room key
- Fob
- Traditional player loyalty card

SynkConnect™ Mobile:

Give players the convenience of a mobile player account and all the benefits of online management through the app. Customize the SynkConnect app options to mirror the property brand and link it with an existing app.

RGB Card Reader

Konami's RGB Card Reader features internally lit RGB functionality that emits changing light colors to signal the status of player login at a machine. The color changes to blue for an inactive/uncarded connection, green for a successful active connection, and red for a misread/failed connection. This provides immediate visual communication to players and staff on login status. It can even combine with Near Field Communication (NFC) technology for contactless login authentication. The RGB Card Reader is also available for purchase apart from SynkConnect.

Blue indicates "uncarded"

Green indicates active "carded"

Red indicates misread/failed connection
