# About Danoë Solutions.

We are experienced in-house management consultants / domain experts specialize in all aspects of MSME management, supply chain strategy, process design and improvement, human resource alignment with goals and processes, outsourcing and resource optimization, focusing on practical outcomes that will add value, build revenues and cut costs.

# In Brief

With more and more globalisation happening in the trade and business the need and easiness to export and import has been higher than ever. However, when it comes to the Imports and Exports, its not only about the identifying customer or vendor and moving the shipment. It is also about the compliances, bank transaction regularisation, awareness of terms and conditions of the shipments and also how to deal with overseas parties for selling or purchasing.

Your extended arm in end to end Execution Based Supply Chain and Process Consulting

# Our Values

## **Trust**

Trust is the corner stone of all our relationships, which foster, long term and healthy associations with our clients, customers and company employees.

---

## **Responsiveness**

The aim is to remain responsive to every idea and strategy that develops long lasting growth patterns for clients and our organisation.

---

## **Accuracy**

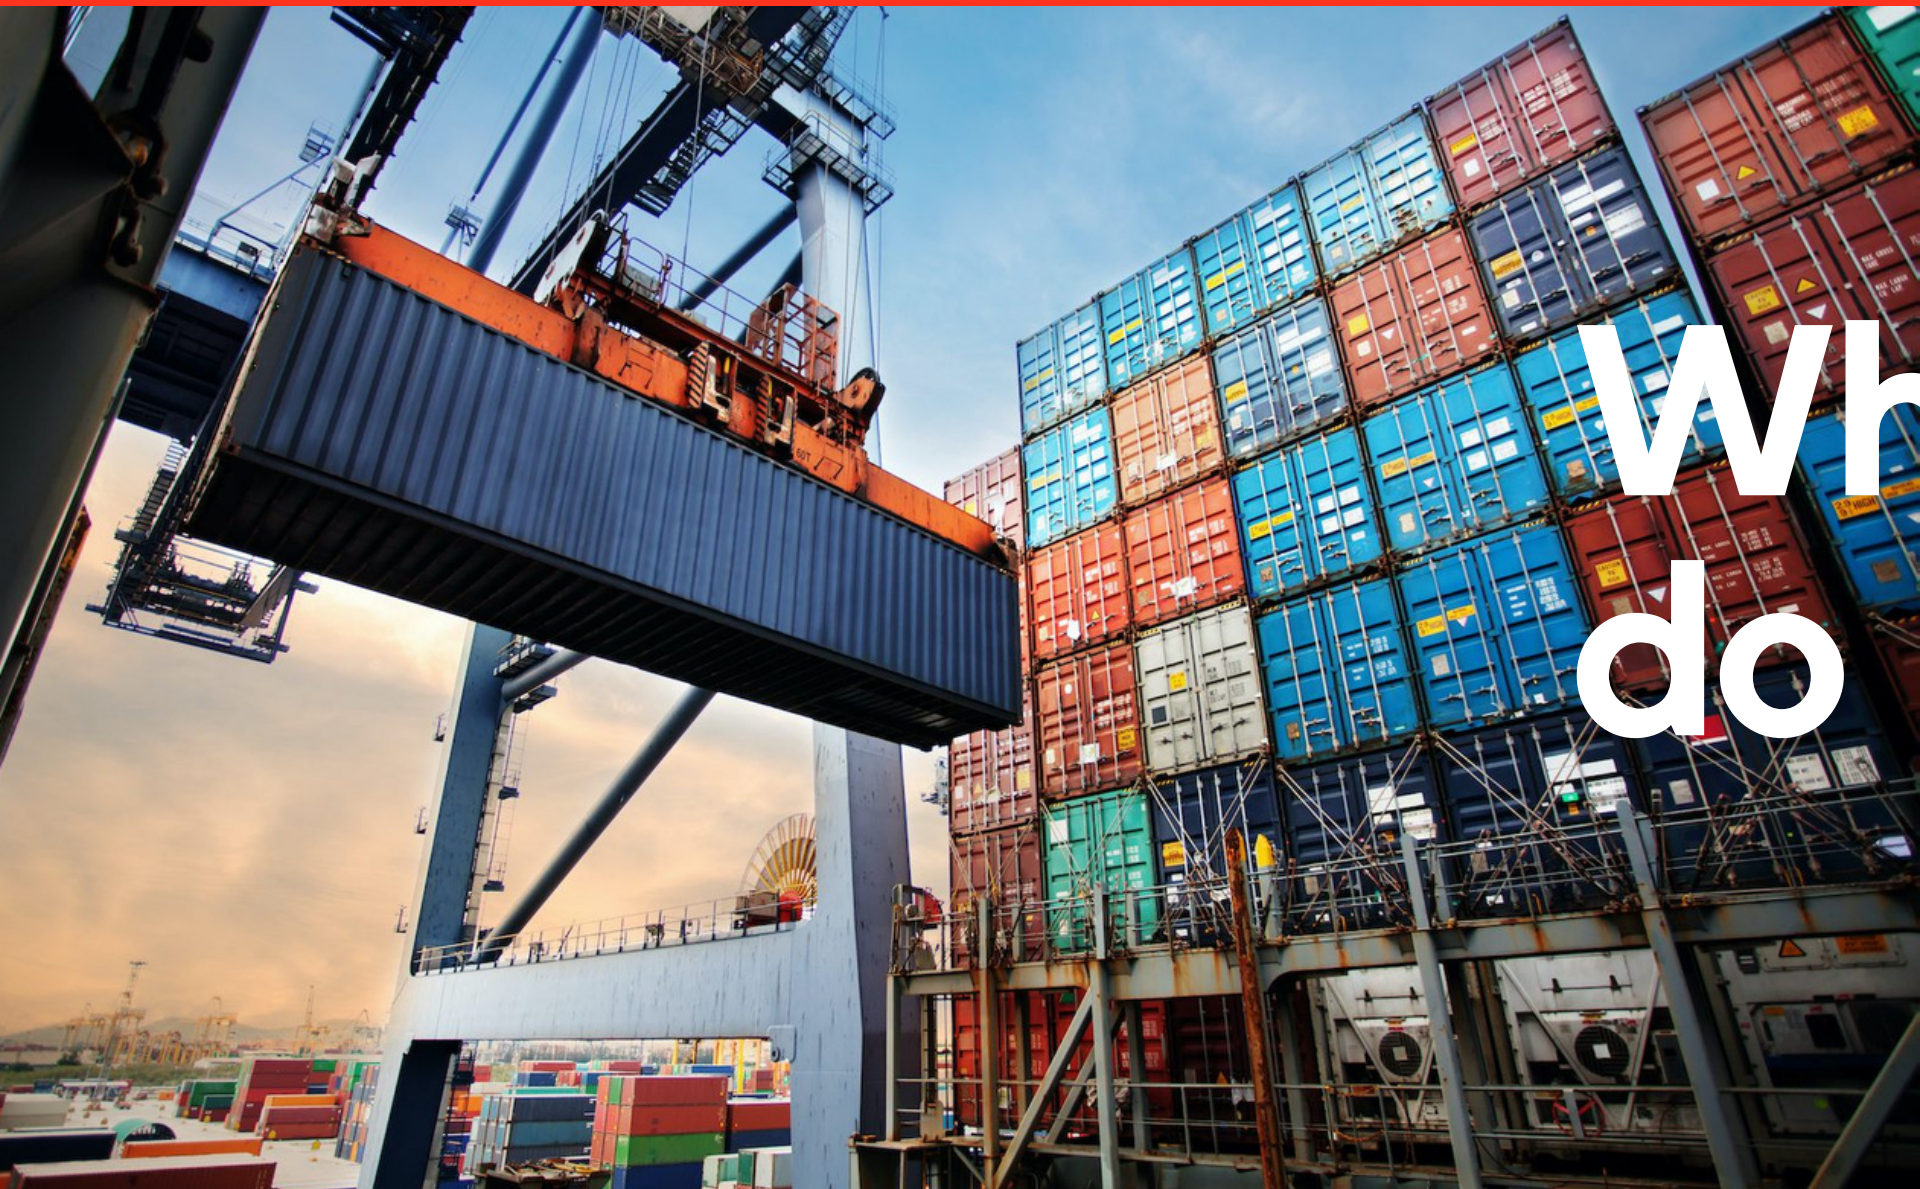

Ensuring that the right approach is followed to achieve the end result with adherence to the law of the land and extreme precision at each step remains the focus.

---

## **Commitment**

For us being committed is all about being able to provide high level business solutions to our clients and customers right through the project and beyond.

# What we do

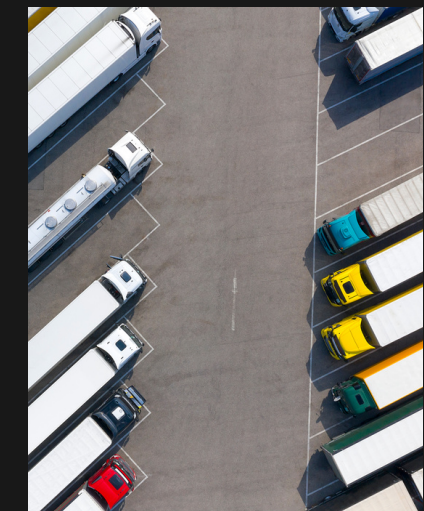

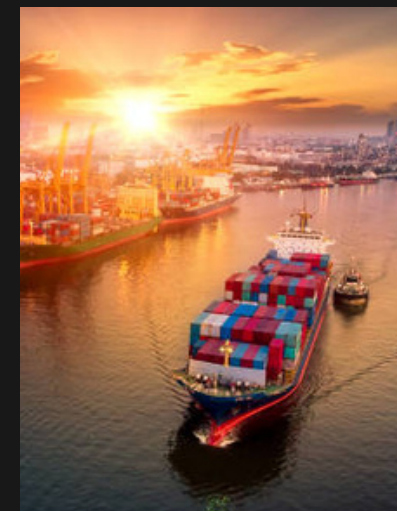

We offer an independent and objective view on overall operations and systems of logistics management. Also, we benchmark the current operations from a third-party perspective by doing a comprehensive diagnosis of processes and parameters. Our commercial and organisational independence from your operations assures that the results of the audit shall be fact based and aimed at overall improvement.

# Operations Consulting

We provide end-to-end execution-based management consulting with core focus on logistics and supply chain consultancy delivering innovative and pragmatic solutions for cost and process optimization, in the field of multi modal logistics, imports and exports, warehouse managements (including greenfield development and network and existing setup optimization in terms of resources and operations), packaging and covering entire gamut of supply chain.

# EXIM Consulting

Through the first time in the industry service based on the execution-based consulting in the domain of EXIM operations, we have been catering to our clients and delivering ease of doing business internationally with optimized cost, compliance adherence and timeliness as the major pillars. We ensure that our clients focus on their core domain and we handle their day-to-day nuances of EXIM through a team working as their extended arm. From document creation to shipment execution through the best of the domain expert service providers across the globe to managing and monitoring compliance our team takes care of all the minute elements of the activities.

Our team ensures that through a customized dashboard delivered to the client we provide them a detailed view as well as the exception report on their desk even before their day starts, thus giving them a complete peace of mind as regards to the EXIM operations.

# Warehouse Management Consulting

Warehouses today are not only storage spaces, but instead host multiple value-adding processes, like just-in-time packaging, assembly, product customization, and in some cases, customer collection services.

In today's era all wars of competition are won by the virtue of efficient logistics. And when you are at war you must ensure that both toilet paper and bullets are kept at the right place, in the right quantity and at the right time. Failing which your soldiers may find it difficult to fight.

Managing the warehouses is not as simple as it sounds and yet not complicated that it is a rocket science. Each expense in a warehousing operation is critical however important is to remember that "We must be aware of even little expenses as a small leak can also sink a great ship. However we must also consider the expense desired as the absence of a small hole in an aircraft window can result into collapse"

## Efficient warehouse management mainly depends on:

- Planning of the building itself (in case of new designs)
- Layout inside the warehouse
- Sections planned within the warehouse
- Processes governing the warehouse
- People managing the warehouse
- Control mechanisms implemented
- Compliance
- Intent and purpose of having the warehouse

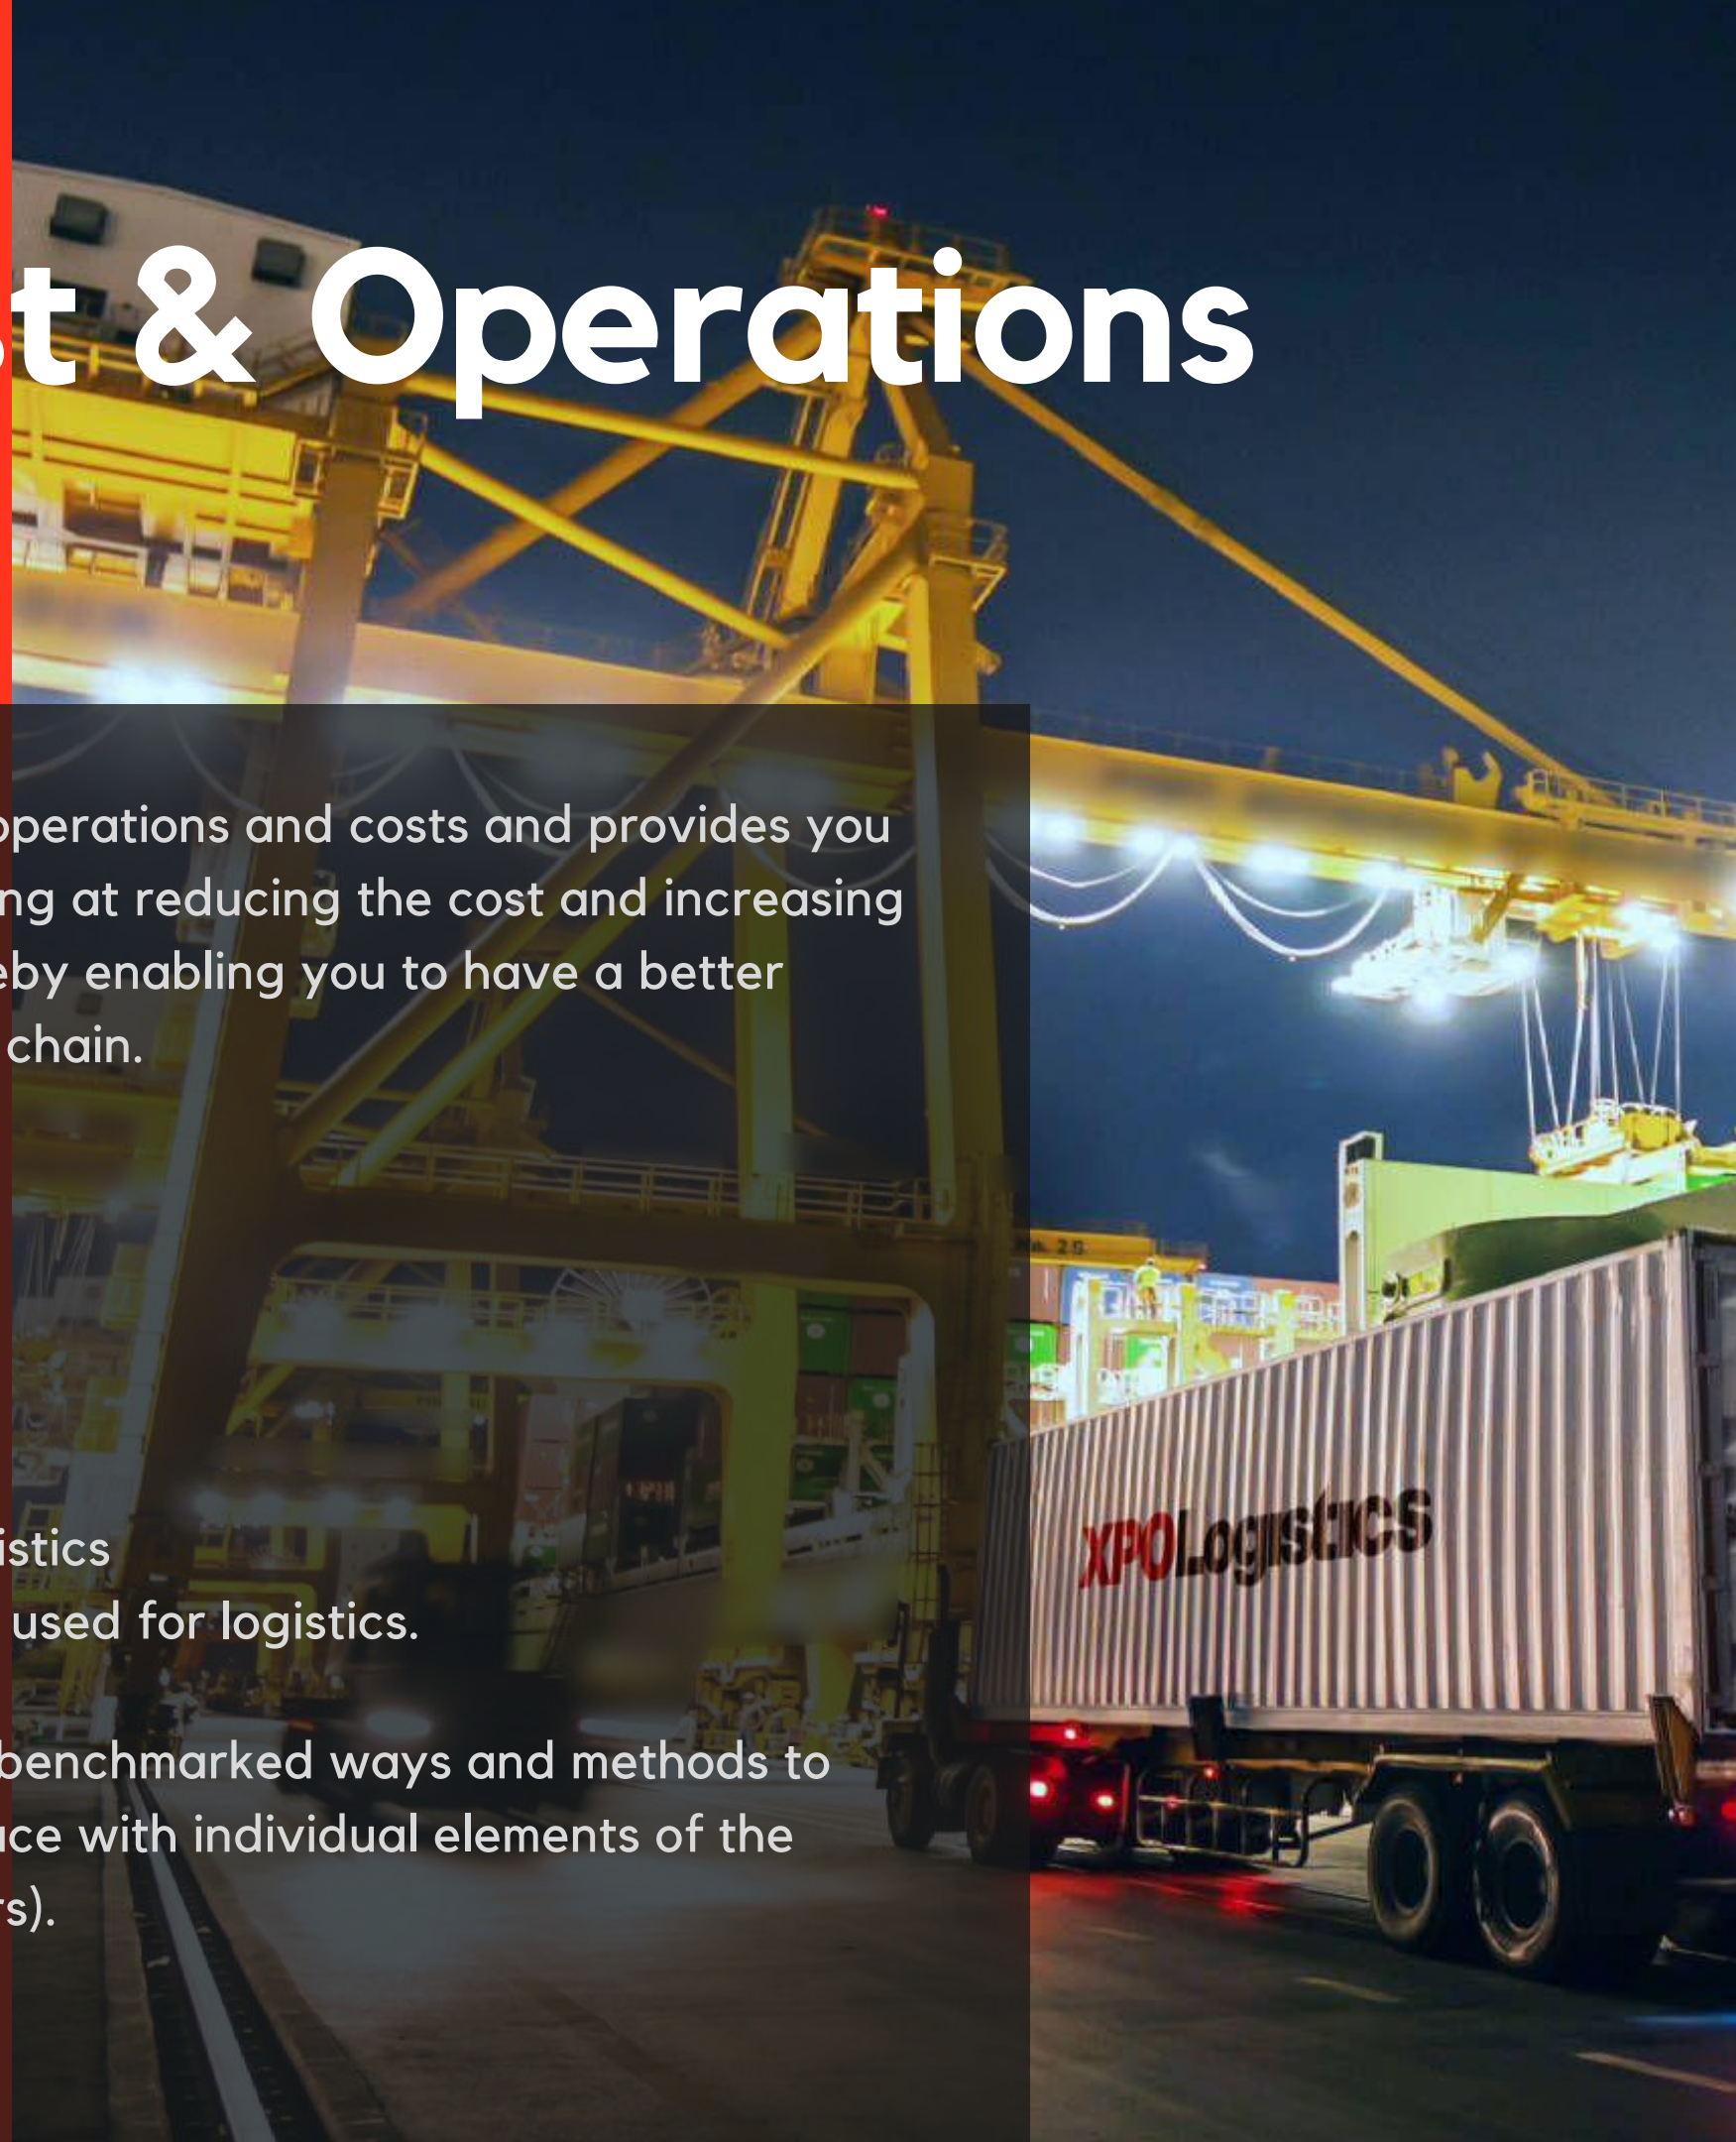

# Logistics Cost & Operations Assessment

We analyse your current end to end logistics operations and costs and provides you with specific domain related action items, aiming at reducing the cost and increasing the efficiency of the entire supply chain, thereby enabling you to have a better managed logistics network and overall supply chain.

- Cost
- Processes
- Monitoring mechanisms
- Performance parameters
- Resource utilisation
- Inventory at various stages related to logistics
- Utilisation and effectiveness of the modes used for logistics.

We provide industry benchmark replace with benchmarked ways and methods to achieve them against each of the minute replace with individual elements of the logistics domain (for process & cost parameters).

# What are the advantages of our contract logistics

## Economy

Cost savings, visibility of transportation, tailored supply chain solutions, and improved overall efficiency throughout your operations.

## Visibility

From suppliers to distribution to transportation, clear visibility and tailored supply chain solutions are required to help your company optimize your supply chain. Our contract logistics are here to help you achieve your operational goals.

## Rapidity

# Corporate Training and Consulting

We provide process re-engineering consultation backed up with execution and with a unique COMBO of Process and People alignment for maximized results. We ensure that people who are ultimately responsible to make processes successful have it in them & are equipped with what it takes to build a successful work culture through customized and benchmarked training modules

Our single point contact philosophy ensures that the clients are now not dealing with multiple service providers for the same shipment and coordinating the various process loop holes. Our team ensures that through a customized dashboard delivered to the client we provide them a detailed view as well as the exception report on their desk even before their day starts, thus giving them a complete peace of mind as regards to the operations.
