

## Wildfires or Warfare?

It's hard not to question everything. Instinct, we all have them, for very good reasons, it's proven to be the most important part to our survival tool kit for longer than... science. It's hard not to jump to the worst possible conclusion, or the most profitable or potentially diabolical agenda. When you add information to conspiracy it moves from theory to evidence, to conspiracy. These days it's about a 2 week turnaround. If you're questioning this, you're probably correct. In my 15 years of experience and investigative capacity, I have to concur at this point. I believe this appears to be another series of conspiracies linked together. Problem, reaction, solution.

Today's dive started with 2 pieces:

<https://twitter.com/leslibless/status/1674522693243215873?s=20> and video: LOOKING FOR CLUES in the CANADIAN FIRES <https://www.youtube.com/watch?v=mHeoalh7cx8>

Where is the dangerous air quality over Canada on this recent map?  
Seems to be isolated to the U.S. WHAT IS REALLY GOING ON

One of the things I'm reading a lot about is the smells associated with the smoke, commonly compared to burning plastics, or tires, or garbage. I can say that northern swamp fires smell like absolutely nothing else on earth, it's the closest thing you can imagine to what hell might smell like.

That said, one of the things I would like to remind people of is that what goes up, must come down. Remember where everyone kind of forgot about those chem clouds from the East Palestine train derailment went? Last seen hanging over northern Ontario and Quebec. The same places burning the past month. Coincidence? Now, I'm not a scientist but I would sure love to see some aluminum and chemical residue tests from some of these places... what would that smell like being lit up "again"

**Patterns.** It's the same pattern in every diabolical event waging war on our unsuspecting societies.

**Problem: *Climate change.*** It's the same pattern with every diabolical event they are waging on our unsuspecting societies. Nature typically accounts for about 10-20% of wildfires, and rarely get to be problematic fires.

As of its most recent update 3 days ago, the interagency fire center has recorded ***3,056 wildfires since the beginning of 2023. The fires have scorched at least 8.1 million hectares — or around 20 million acres — of land across Canada this year.*** There are never any winter wildfires although on occasion one of the hundred year old bog fires will flare up and a small fire might burn in a remote forest for a few days before going back underground or smothering out so what we are looking at is primarily from the beginning of *May to the end of June*. This the worst wildfire season in recorded Canadian and North American history. [https://en.wikipedia.org/wiki/2023\\_Canadian\\_wildfires](https://en.wikipedia.org/wiki/2023_Canadian_wildfires)

There is nothing natural or coincidental about what we are all now experiencing. I learned a lot about wildfires having spent my life living with them, and I also learned about how often they were not of natural origin. It was always a local "make work project." Growing up in the North there was always fire season where about the middle of May people would go intentionally starting fires so all the summer seasonal and natives would get paid insane govt \$ to put in time working fire lines. Books and government statistics may say otherwise but my experience taught me that 80% of the fires I worked on were of this kind of origin. When nature starts fires, she has never been able to figure out how to be so helpful by starting these fires at about exactly where all the roads end, in every province....

### **The "Official Reaction"**

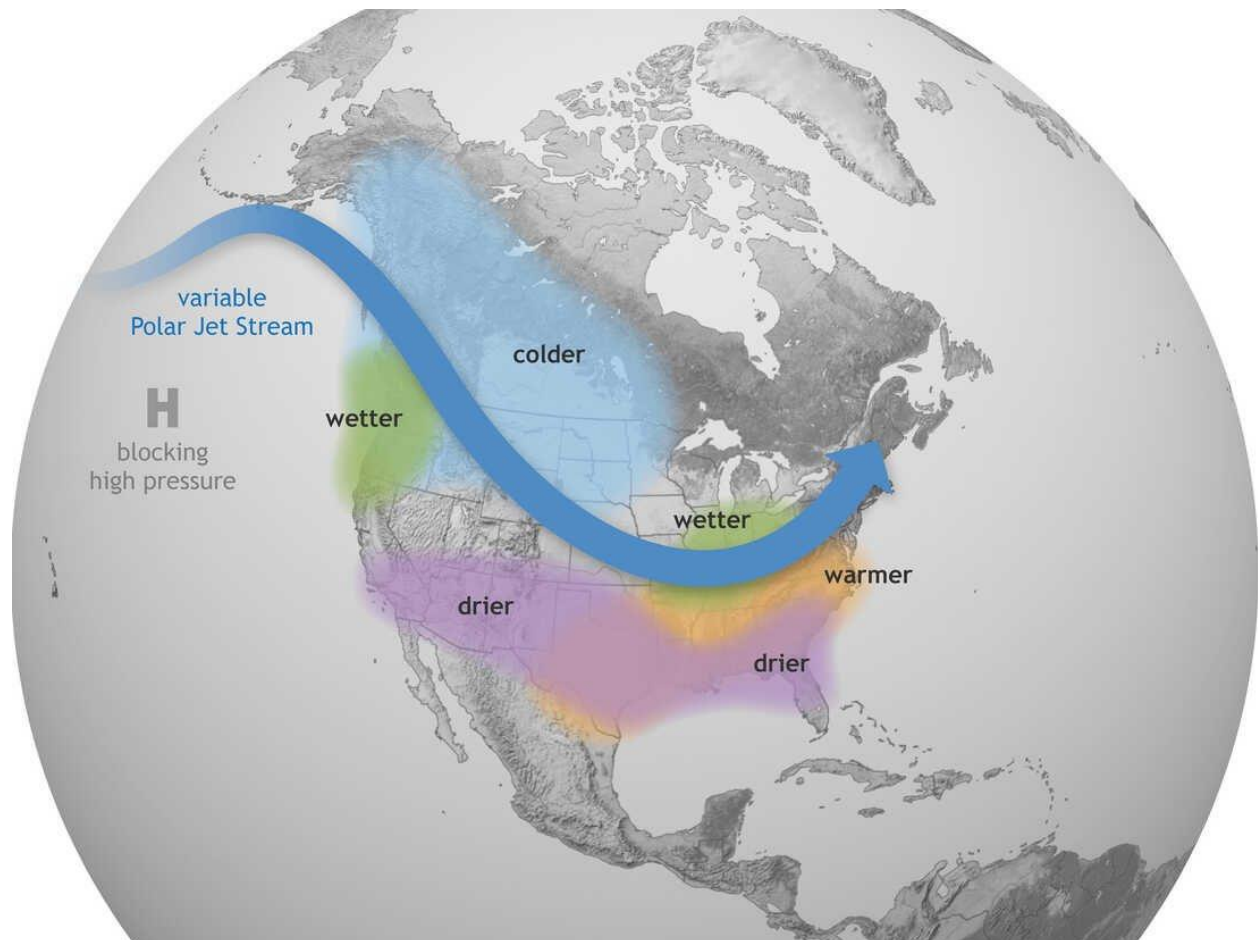

***"Due to climate change, weather has been warmer and drier, raising wildfire risk as vegetation is more flammable. Wind from a passing cold front during the week of May 18 exacerbated the issues. Canadian Minister of Public Safety Bill Blair said: "These conditions,***

*this early in the season, are unprecedented. Due to climate change, similar extreme weather events may continue to increase in both frequency and severity across our country."*

The problem with this is Bill Blair, and *'his REACTION'* after all he is Canada's very own "Mr False Flag." Bill Blair was the man behind Canadian Police forces across the nation being converted into para-military units. He orchestrated the 2010 Toronto G-20 riots ([https://en.wikipedia.org/wiki/2010\\_G20\\_Toronto\\_summit](https://en.wikipedia.org/wiki/2010_G20_Toronto_summit)) and thereby he demonstrated the need for militarized police forces, which... Mr Trudeau of course embraced. Bill has regularly been promoted since, he is now the Minister of Public Safety. [https://en.wikipedia.org/wiki/Bill\\_Blair\\_\(politician\)](https://en.wikipedia.org/wiki/Bill_Blair_(politician))

And then ... it comes, he also states;

*"Pollution due to a global increase in wildfires has created widespread, long-term impacts on human health. Carbon emissions also increased as the wildfire emissions in Canada in the first half of 2023 already broke the annual record."*

I started as a firefighting trainee in 1991 and worked in the field until 2006 while specializing in breathing air and industrial hazardous waste response teams and accident investigations. I left because I could not longer stomach the big companies manifesting dangerous situations in the name of profit, until something went horribly

sideways, and then they would try to lay the blame on the workers. Problem, reaction, solution. I could explain in depth about the 'poor stewardship' of forest management allowing conditions to get extreme. I could speak in depth to the lack of funding available to deal with fire control and suppression. I could speak to the volumes of evidence others like Robert Brame who is a forensic arborist who has analyzed 38 California fires and has come up with hundreds of photographic evidence of IMPOSSIBLE normal fire behavior. He explains several signs, and impossibilities which could be explained he says by the work of another investigator named Dane Wigington at: <https://www.geoengineeringwatch.org/>

Robert, Dane and others have stated that particularized aluminum, an amazing accelerant as I explained a few weeks ago could partly explain a lot of these strange fire behaviours and knock on evidences we see in both of their research programs.

But none of that explains arson, an inconvenient explanation when the desired outcome are the climate change cult control measures. Quebec fires are not the only outbreaks to have suspicious origins. The Royal Canadian Mounted Police (RCMP) have arrested several arsonists, who have been charged with lighting fires across several provinces, including Nova Scotia, Yukon, British Columbia, and Alberta. The motive behind lighting the fires is unclear, but they have **all taken place in the same time period.**

<https://www.lifesitenews.com/news/satellite-footage-raises-possibility-that-arson-not-climate-change-theory-to-blame-for-quebec-fires/>

Detractors will say 'lightning strikes. When you look at the lightning maps, ask one of them to explain how the fires covered Canada starting fires coast to coast, is the lightning programmed?

[https://www.lightningmaps.org/blitzortung/america/index.php?bo\\_page=archive&bo\\_map=north\\_middle\\_america&lang=en&bo\\_year=2023&bo\\_month=06&bo\\_day=02&bo\\_hour\\_from=0&bo\\_hour\\_range=6#bo\\_arch\\_strikes\\_maps\\_form](https://www.lightningmaps.org/blitzortung/america/index.php?bo_page=archive&bo_map=north_middle_america&lang=en&bo_year=2023&bo_month=06&bo_day=02&bo_hour_from=0&bo_hour_range=6#bo_arch_strikes_maps_form)

OR at the 2 minute mark of this 27 minute video showing satellite imagery of dozens of these fires igniting, and accelerating ***AT THE SAME TIME, ON THE SAME***

***DAY.*** <https://www.youtube.com/watch?v=zKukZ2oOFF0>

*I have a few questions:*

How do Forest fires burn down towns while failing to burn down the forest, or the tree's in the towns?

How do water bearing tree's burn from the inside out?

Can water carry these accelerants?

If this is in fact geoengineering and water can be the carrier, what are they capable of doing to human consumers?

According to a TikTok video shared by Stew Peters and the "Angry Beekeeper" there is more at stake, formaldehyde and benzene are a byproduct of the massive amounts of this smoke being combined with water in the atmosphere and being redistributed across the good ol USA. <https://twitter.com/realstewpeters/status/1674512526367768585>

The answers, or at least some of them are in the numbers of fires, the timing of these, and the intent. The residual effects of this can be a catalyst for worse things when added to other current events. This will force people to live indoors, be removed from their parks and camping and resort living, cause health conditions, exasperate any existing conditions anyone may have, destroy food production... the list goes on and on and on well past just 'poisoning us.'

People are being herded, and will be killed by these conspiracies. Listening to the Schwabs, Gore's, Trudeau's and Biden's of the world who will continue screaming that only solving global warming and depopulating can be the only available solution, I have no reason to suspect they will not continue to burn us out or poison us to achieve their agendas. So how has Canada responded?

**Solutions** enacted by the Canadian "Governments in all of this?

Here are a few:

- Evacuations
- provinces put campfire bans in place on June 8, to stay in effect until October
- Natural Resources Canada, with its Fire Weather Index, also tracked the wildfires and issued warnings
- Travel restrictions were placed in southeastern Manitoba on May 27
- On June 6, the Canadian government announced that they and the [Government of the Northwest Territories](#) would match [United Way](#) donations for disaster relief in the region
- On June 7, the provincial government announced it would give a one-time grant of \$2,500 to registered farmers in Halifax and Shelburne County who had been under mandatory evacuation orders

**Some of the impacts?**

Besides millions of lives disrupted, people made sick, perhaps being poisoned, in mid-May, oil companies in Alberta, British Columbia, and Saskatchewan curbed production as a precautionary measure in parts of the provinces; this in turn drove up the price of oil, the carbon tax doubled again on July 1st and most of our nations celebrations were cancelled... All in all a Canada day Trudeau is I'm sure very proud of with no regard to the impact on America. Or if he does it would seem he has Brandons blessing to 'carry on soldier'?

## United States [[edit](#)]

*Main article: Smoke from the 2023 Canadian wildfires*

### May [[edit](#)]

In May, the [Minnesota Pollution Control Agency](#) issued several alerts for poor air quality due to smoke from Alberta and Saskatchewan fires<sup>[117][118]</sup> and ground-level ozone.<sup>[119][120][121]</sup> Smoke from the Alberta wildfires led to air quality alerts in Colorado, Montana, Nebraska, North Dakota, South Dakota, Utah, Wisconsin, and Washington by May 21, 2023.<sup>[122][34]</sup>

### June [[edit](#)]

On June 2, smoke from the Nova Scotia wildfires affected air quality in Washington, D.C., and the states of Maryland, Pennsylvania, and Virginia.<sup>[81]</sup> The smoke from wildfires in Quebec<sup>[123]</sup> drifted into the [Northeastern United States](#) on June 5–6 and triggered air quality alerts for most of [New York](#), [Connecticut](#) and some of the surrounding states, as well as the Midwestern states of Minnesota, Michigan, and Wisconsin.<sup>[124][125]</sup> The smoke on June 6 was estimated by one Stanford researcher to have been the third-worst in the country since 2006.<sup>[118]</sup> By the night of June 6, [New York City](#) had the worst air pollution of any major city in the world; by the morning of June 7 it had fallen to second place, behind [Delhi](#).<sup>[126][127]</sup> This also marked the city's worst air quality since the 1960s.<sup>[128]</sup>

By June 7, air quality alerts also went out to residents in the [Delaware Valley](#) in Pennsylvania, New Jersey, and Delaware, and to additional areas in New England.<sup>[129][130]</sup> In total, approximately 128 million Americans were under air quality alerts by the evening of June 7.<sup>[115]</sup> In New York City; Syracuse, New York; Princeton Junction, New Jersey; and the [Lehigh Valley](#) in Pennsylvania, the [air quality index](#) surpassed 400.<sup>[128][104]</sup> After a brief respite, New York City's air quality returned to being the worst of any major city in the world.<sup>[115]</sup> City officials announced plans to distribute one million N95 masks on June 8.<sup>[115][104][131]</sup>

Several airline flights to and from New York City, New Jersey, and Washington, D.C. were delayed or cancelled.<sup>[132]</sup> By the afternoon, the [Federal Aviation Administration](#) halted all flights going to [LaGuardia Airport](#) in New York City, citing visibility concerns.<sup>[104][128][133]</sup>

Schools across New York, New Jersey, and Connecticut announced closures, with the district of schools in Danbury, Connecticut announcing several alerts also advising students.<sup>[128][134]</sup> Major League Baseball, the National Women's Soccer League, and the Women's National Basketball Association postponed games scheduled to be held in New York City, New Jersey, and Philadelphia the night of June 7.<sup>[104][135]</sup> The [Public Theater](#) cancelled its June 8 and 9 [Shakespeare in the Park](#) performances of *Hamlet*.<sup>[115]</sup> On Broadway, performances of *Camelot*, *Hamilton*, and *Prima Facie* were cancelled due to the poor air quality.<sup>[136][137]</sup>

On the night of June 7, Connecticut announced a warning advising residents to use masks and stay indoors due to an increase in smoke in the state.<sup>[138]</sup> Danbury and Greenwich citizens had used masks earlier in the day as well.<sup>[139][140]</sup>

On June 6 and 7, solar farms in the Northeast and Midwest dropped production by around or more than 50% due to the smoke.<sup>[141]</sup>

On the morning of June 8, air quality was worst throughout the area surrounding Pennsylvania, Washington, D.C., and Trenton, New Jersey.<sup>[142][143]</sup> Philadelphia's air quality levels reached their worst levels since 1999.<sup>[144]</sup> New York City climbed into the worst tier out of the [United States Environmental Protection Agency's](#) six-tier [air quality index](#), causing Governor [Kathy Hochul](#) to call it an "emergency crisis".<sup>[128]</sup> Flights continued to be delayed for planes bound for Newark, New York City, and Philadelphia, with delays for Charlotte and Dallas also being eyed.<sup>[145][146][147]</sup> [United Airlines](#) issued travel waivers to impacted passengers.<sup>[148]</sup> Horse racing at [Belmont Park](#) in New York was cancelled, causing fears of a potential postponement or cancellation of the [Belmont Stakes](#), scheduled for June 10.<sup>[148]</sup>

[New York City public high schools](#) and the [School District of Philadelphia](#) announced they would switch to virtual learning on June 9, due to poor air quality.<sup>[115][149][150]</sup>

By June 11, air quality alerts were still active in New York City, Baltimore, and Philadelphia, but air quality had substantially improved from earlier in the week.<sup>[151]</sup>

On June 14, an air quality alert was issued for [Minnesota](#) due to dangerous air quality levels affecting the state. The air quality in [Minneapolis](#) reached 256 at 6pm that day.<sup>[152]</sup>

On June 27, the smoke spread over the Midwest, causing Chicago to suffer from the worst air quality in the world, reaching 228 AQI.<sup>[153]</sup> Michigan and Pennsylvania were also affected,<sup>[154]</sup> and sent out air quality alerts to residents.<sup>[155][156]</sup> Air quality alerts were issued for 80 million people in the USA.<sup>[157]</sup>

Wildfire smoke in Minneapolis, MN

Every day of research I do, I'm haunted by the words of Rich Higgins when he explained 'unconditional warfare' to me. It's the only conclusion I can come up with at this time. When it comes to concretely saying who exactly is waging it on us though... Sorry, I got nuthin... nuthin but conspiracies and theories so we may have to wait a few weeks!
