

FINALLY, the solution to your mill's *kiln-stick problems*; stickering done *better, and cheaper!*

Shown with optional Belt-Bumpers

A game-changing solution from continuously disposing of broken, worn-out kiln sticks and spending substantial money every month, year after year, buying more sticks that you KNOW won't last!

TUFF-STIK™ is GUARANTEED to outlast and outperform *any* stick on the market, period. They have the best grip on lumber, strong and rigid, yet light enough to not damage your belts or equipment. They don't hold moisture, can be used in sub-zero cold or high heat or steam environments; they evenly conduct heat from the outside of your kiln package through the center and radically reduce wet-spots and improve dry kiln performance. Designed with the direct input from mill operators, these patents-pending aluminum-alloy kiln sticks will last over 500 turns; some earlier versions of prototypes have seen more than 600 turns and are *still in use!*

Stacker manufacturers love **TUFF-STIK™**. They are 100% consistently straight, dimensionally uniform every turn, and you don't have to slow down stacker speed to cull-out broken or inferior stickers. Imagine having *zero clean-up* of broken and damaged sticks under the stacker and tilt-hoist every shift? No more need to have 'a mountain' of waste in busted stickers out in the mill's yard that you spend labor and equipment dollars on disposing of. Less costs, less headaches!

With the patented external ribs feature, **TUFF-STIK™** grabs the lumber top and bottom, holds it firmly under load while drying, and greatly reduces degrade that normally occurs from bow, twist and warp. And, you know that *less degrade results in mill's greater profitability!*

Tuff-Stik™ is truly a 'green' product, 100% recyclable. When they eventually do come to the end of their service-life, they retain up to 50% of their original raw material cost...*an asset, not a liability!*

If you're interested in getting the job done quicker, **BETTER, and CHEAPER** with predictable desired outcomes, check out these new all-aluminum dry kiln sticks...here's an opportunity to beat your competitors and get the opportunity to be first to market with a BETTER SOLUTION!

"Bringing clarity to the chaos."
