## The 401RT Express: Rescuing Transportation in Toronto

By 2051, a million more people will call Toronto home, and many thousands more will commute into the city from neighbouring municipalities. Travel demand growth will offset the expected transit ridership growth of transit initiatives identified in the Ontario Government's Greater Golden Horseshoe Transportation Plan for Toronto.

Achieving a sustainable transportation system in Toronto must recognize that most of Toronto's traffic problems originate in the suburbs, including in the northern half of Toronto, where 1.3 million residents and 300,000 jobs today will increase by approximately 30% or more by 2051. Highway 401 in the core of the Toronto area is at high risk of becoming non-functional due to traffic gridlock. The Premier of Ontario has recognized the danger and has proposed to add highway capacity by way of a tunnel under Highway 401. The end result may be better traffic flow on Highway 401 for a few decades; however, the tunnel's effect will not reduce overall congestion – it will merely move it onto municipal roads, which will by themselves be facing worsening congestion.

Until there is a practical public transit alternative to driving across northern Toronto or to/from northern Toronto, congestion will worsen on Highway 401, the Don Valley Parkway, and many other roads.

Gridlock must not be allowed to happen. The enormous rapid transit gap across northern Toronto must be resolved.

The most significant piece of public transit infrastructure preventing major modal shifts to public transit is the absence of a continuous east-west rapid transit line from Mississauga to Pickering through the underserved northern half of Toronto.

The rapid transit line illustrated below – the **401RT Express** – is a full-scale rapid transit line with up to 50 stations that extends 85 kilometres from Pickering Town Centre through northern Toronto to Islington Avenue at Highway 401, and westward from there consisting of two divergences, one to Pearson International Airport and to west of Mississauga's City Centre, and the other continuing along Highway 401 into northwestern Mississauga.

**Without this rapid transit line**, or something very similar, there is no hope of achieving the level of reductions in automobile traffic necessary to avoid increases in traffic congestion in Toronto. The 401RT Express would connect to up to 13 north-south rapid transit lines and 100+ municipal bus routes. It would transform transportation in the core of the Toronto area and increase quality of life significantly.

The 401RT Express would ease the financial burdens of many thousands of householders struggling with costs of a second or third automobile. While a car costs between \$11,000 to \$20,000 per year or more to own and use, a TTC transit pass in 2024 cost just \$1,900 per year.

The 401RT Express is likely to be extraordinarily successful. Major shifts from driving to the 401RT Express will occur because travel on Highway 401 and on alternative local roads will often be significantly slower than traveling on the 401RT Express for the east-west segment of most trips. Added to this basic modal shift, other factors will increase transit ridership by 2051:

- GO Transit's six intersects with the 401RT Express will generate approximately 27 million new GO Transit trips and 24 million new 401RT Express trips.
- The Islington-to-Pearson-to-Erindale GO branch of the 401RT Express will generate additional trips to and from downtown Mississauga, the Mississauga Airport Corporate Centre, and other points;
- The transit modal share of trips to and from Pearson International Airport and its adjacent employment area will be multiple times higher than is currently the case;
- Additional buses on north-south routes intersecting with the 401RT Express will carry more travelers whose destinations are not the 401RT Express; an estimate is 52 million new transit trips per year by 2051;
- Some urban development in the form of high density housing and office uses at and near the 401RT Express will have higher than average rates of transit usage;
- High costs of automobile ownership and use will accelerate the shift of trips to the 401RT Express.
- The growth in truck movements will also affect gridlock and encourage shifts to transit for commuters.

Without the 401RT Express, those additional transit trips will not occur. Overall, the 401RT Express will generate more than 400 million new transit trips per year by 2051.

Key destinations directly served by the 401RT would be Pickering Town Centre, Scarborough City Centre, the Line 1 subway and the Ontario Line, Yorkdale, Pearson International Airport and its surrounding employment area, and the Mississauga City Centre area. The northwestern arm of the 401RT Express would reduce dramatically the highly congested portion of Highway 401 between Dixie Road and Highway 400.

The 401RT Express would require an extension of the Ontario Line from Eglinton Avenue East to the 401RT; an extension to Sheppard Avenue East is in the Government of Ontario's plans for future rapid transit.

**The 401RT Express is proposed to be almost entirely elevated above ground** – 85 kilometres from end to end, including 64 kilometres over the Highway 401 corridor. It would cost an estimated \$62.5 billion to build, plus approximately \$6 billion for rolling stock.

The 401RT Express would render some existing transit expansion plans unnecessary and operationally non-viable, including most of the Eglinton East LRT extension and the Eglinton West LRT extension from Renforth to Pearson. Moreover, the 401RT Express would divert most Sheppard Subway users; the Sheppard Subway would not connect well to the 401RT Express, and should be eliminated entirely and replaced by enhanced bus services from Port Union Road to Weston Road. Not building the planned Sheppard Subway extensions and eliminating the Sheppard Subway would save approximately \$6.7 billion, net of subway decommissioning costs. In total, a cost avoidance of \$11.6 billion can be realized (view illustration below).

Among its many benefits, the 401RT Express will contain and/or reduce highway and road congestion in Toronto, provide the northern east-west link to up to 13 north-south rapid transit lines, boosting their ridership, and reduce the financial and social costs of dependency on travel by automobile for tens of thousands of households. A list of more than 60 general benefits is available at [www.401rt.ca](http://www.401rt.ca).

When compared to the recently-approved Toronto-to-Quebec City high speed rail service, the 401RT Express may be 16 times as cost effective, based on cost per transit user (comparison table below). Importantly, the 401RT Express is an immediate need to maintain the functionality of Highway 401; the HSR is not as critical.

The 401RT Express should be seen as a continuation of current rapid transit expansion activities. Given the rapidity of growth and road congestion in the Toronto area, the construction of the 401RT should begin as current rapid transit projects begin to wind down, with advance planning and evaluations beginning as soon as possible.

**Note 1 :** Current and planned rapid transit initiatives rendered obsolete by the 401RT Express:

1. The \$5.3 billion Eglinton East LRT to Malvern (+rtn. to McCowan), less a useful \$1.7bn extension of the LRT to Kingston Road. Access to Malvern and the University of Toronto Scarborough Campus is faster for many travelers via the 401RT than the LRT.
2. The \$1.3 billion Eglinton West LRT Renforth to Pearson. The Line 1 subway and 401RT combination would deliver most downtown trips to Pearson as fast as the Eglinton West LRT and provide direct transit trips to Pearson from northern Toronto.
3. The \$7.5 billion Sheppard Subway extension to Scarborough Centre station. The Sheppard Subway is closely parallel to the 401RT, which would draw users of the Sheppard Subway, to the point that the subway would be operationally non-viable.
4. Savings would be partially offset by decommissioning costs of the Sheppard Subway.

\* Excluding rolling stock

40 million trips/year = 109,589 trips per day

30+ years from now, there will be a million more people living in Toronto. The **401RT Express** is essential if highways and local streets in Toronto are to be decongested. Currently-planned rapid transit expansions will struggle to keep up with travel demand growth, and will not reduce overall use of motor vehicles on city streets. Adding road capacity to Highway 401 is not a solution; its impact will be to encourage driving and to increase congestion on local roads.

The **401RT Express** should be recognized as inevitable and urgent. The 401RT Express's seamless length, speed of service, connectivity, and high visibility will make it a success. It will render numerous current rapid transit initiatives unnecessary and operationally nonviable: the Eglinton West LRT Phase 2 extension to Pearson International Airport, the Sheppard Subway extn (and the Sheppard Subway itself), most of the Eglinton East LRT, and the Jane Street LRT. Spending on these will waste an estimated \$12 billion.

The \$68 billion **401RT Express** (including \$5bn rolling stock) is highly affordable, and is estimated to be more than twice as cost-effective as rapid transit initiatives currently being implemented, based on new transit trips generated. Its net cost to build would be as low as \$57 billion (after cost avoidances of aforementioned initiatives). Federal cost sharing can be 40%. The 401RT Express (or similar) would be transformative for transportation in Toronto, and is essential for achieving climate change goals. It is essential for tens of thousands of households that struggle with the high costs of automobile ownership and use. Visit [www.401rt.ca](http://www.401rt.ca) for more information. Call John Stillich at 705-294-4110 or visit [www.401rt.ca](http://www.401rt.ca) for more information.
