

## ■ Patching you through to anywhere on Earth

You can now make telephone calls from your aircraft to anywhere in the world.

British Telecom's high frequency radio station at Portishead is offering a brand new service to act as your UK and International telephone operator. To use this service, all you have to do is give Portishead the number you require and we'll put you through, 24 hours a day, 7 days a week.

## ■ A very simple process

Once you're through to Portishead, just give your call sign, flight number, required telephone number and billing address. You'll be charged only £1.62\* per minute for UK calls and £1.56\* per minute for calls abroad (plus the normal tariff from the UK to the specified country). Accounts are forwarded every quarter. And if you have a UK telephone number, you can have the call charged to that number, from anywhere in the world even if you're calling Portugal from above the South Pole.

## ■ Our special facilities

Portishead responds to aircraft carrying both Simplex and Duplex HF equipment. What's more, we can easily link you into SITA network for a charge of only £3.00 for up to 20 words.

You can also be alerted to receive calls, via Portishead's SELCALL service. So we can really keep you in touch.

Our automatic telex service is also available for specially equipped planes. For full details please contact Ernie Croskell on the number overleaf.

## ■ Much cheaper, more comprehensive

With a call charge based on a one-minute minimum (rather than the three minutes charged by our nearest competitor) we offer a far cheaper service than our rival systems. And another overwhelming advantage is that Portishead links into over 160 countries on the International Direct Dialling network, giving you a truly worldwide service.

Portishead has the latest generation of aeronautical communications equipment, and the station is manned by over 150 fully trained radio officers who are ready to offer you the best possible service.

## ■ Tune in on a free call

Tune your transceiver to our frequencies (see list below) and your first phone call will be absolutely free of charge. It's a great way to test the system.

\*15% VAT WILL BE ADDED TO UK BILLING ADDRESSES.

## ■ High Frequency Simplex Working Channels

At Portishead, we maintain a continuous monitor of the following frequencies (kHz).

4807 8170 12133 16370 21765

Additionally, the following frequencies may be used on request (kHz).

4810 8185 12168 17405 18210 19510

The latest free propagation charts are available on request.
