

Access is available to the UK and overseas data networks via Global Network Services – and complex documents or technical information can be transmitted instantly using fax or electronic mail.

**Taking it personally**

The advanced technology of BT Inmarsat is fully supported by human

resources. With a two-digit code to Goonhilly, the experience and support of BT is always available for technical communications assistance.

Major benefits of the telex service include the multi-telex system which allows the same telex message to be relayed to several destinations easily and cost-effectively.

Fleet management is easier too. Computers on board can be linked to on-shore mainframes to provide companies with real-time information, such as a ship's position and performance statistics.

A full operator service makes BT Inmarsat user-friendly, with directory assistance, collect calls and radio-paging. With Voicebank, you can arrange by telephone or telex for a message to be placed in a voice mail-box on shore. With Phonetex, a customer on shore can dictate a message over the phone to be delivered to a ship as a telex.

BT Inmarsat is also a simple and effective medium for direct-dial personal calls for both passengers and crew. And they can send important messages to family and friends via the Telex Letter or Telex Greeting Card service.
