Lockset: Quality Lockset
Glass: Tempered insulating glass 5+20+5mm

Furnitures

Supplied by Top Supplier
Wood: Rubber wood, Solid Wood
Style: Scandinavian design
Grade: 4-Star Hotel Grade

Key Features

Life Span: Frames 15+ years, cover fabric 8-10 years

The lifespan of a tent mainly depends on the performance of the cover tarpaulin, which is generally 8-10 years of life. Our cover fabric is tear-resistant, durable, waterproof, fire retardant, mold-proof, and anti-corrosion.

Wind Load: 80-120km/h

The wind resistance of the tent depends on the connection method of the base. Our glamping dome tent has a solid foundation and can withstand level 12 typhoons, with a snow load of 0.30kN/m.

Working Temperature Range: -30 to +40°C

Our dome tent has two-layer of cover fabric and insulation liner. It is suitable for living in various weather conditions from 40°C to minus 10°C. It will be perfectly fitted in colder or hotter weather with the optional floor heating, air conditioning, fireplace, or other configurations.

Snow Load: 75kg/m²

The total static weight that can be supported over the entire dome is usually greater than any normal snow load it will have to support, as snow does not easily accumulate on a round roof. If the snow on the dome reaches 15cm, you should remove it with a broom or similar tool in order to prevent damage to the dome cover.

100% waterproof; flame retardant to DIN4102 B1, M2, CFM; UV resistant, tear-resistant, self-cleaning ability, etc

All the materials of our domes have passed the environmental tested.
