

Saint Lawrence Church

Technical Assistant Needed

There are three networked systems at our church that require support and should be maintained by more than one person.

1) The Ice-Melt system is on its own sub-network with a dedicated router in Ceader Hall. The connection is used to obtain weather information and to automatically download updates. The melting system itself is maintained by an outside vendor.

2) Live Streaming is a very important part of our Church,our Mass is viewed about 50 times per week. The system consists of a Panasonic camera, an AJA streaming device, and a digital audio system. Streaming is done through our Facebook Account.

3) Ceader Hall Audio Visual System – This system has been recently overhauled and includes 2 flat screen tvs, two LED projectors, and 5 wall panels, Each wall panel controls a classroom, and can also broadcast to all the classrooms. There is a microphone used for our social events, such as Night at the Races.

4) 2 Lenovo laptop computers running Microsoft Windows 11.

We are looking for someone with some basic Microsoft Windows and networking experience. Windows users should know how to perform routine tasks, such as adding applications, user management, and applying system and application updates.

Networking background should include familiarity with basic network components such as modems, routers, and switches, and have the ability to configure same.
