Executive Summary

This *South Fork Wind Farm and South Fork Export Cable Construction and Operations Plan* (COP) is being submitted by Deepwater Wind South Fork, LLC (DWSF or the Applicant) to support the siting and development of the South Fork Wind Farm (SFWF) and the South Fork Export Cable (SFEC), collectively the Project.

The SFWF includes up to 15 wind turbine generators (WTGs or turbines) with a nameplate capacity of 6 to 12 MW per turbine, submarine cables between the WTGs (Inter-array Cables), and an offshore substation (OSS), all of which will be located within federal waters on the outer continental shelf (OCS), specifically in the Bureau of Ocean Energy Management (BOEM) Renewable Energy Lease Area OCS-A 0517 (Lease Area),¹ approximately 19 miles (30.6 kilometers [km], 16.6 nautical miles [nm]) southeast of Block Island, Rhode Island, and 35 miles (56.3 km, 30.4 nm) east of Montauk Point, New York. The SFWF also includes an Operations and Maintenance (O&M) facility that will be located onshore at either Montauk in East Hampton, New York, or Quonset Point in North Kingstown, Rhode Island.

The SFEC is an alternating current (AC) electric cable that will connect the SFWF to the existing mainland electric grid in East Hampton, New York. The SFEC includes both offshore and onshore segments. Offshore, the SFEC is located in federal waters (SFEC – OCS) and New York State territorial waters (SFEC – NYS) and will be buried to a target depth of 4 to 6 feet in the seabed. Onshore, the terrestrial underground segment of the export cable (SFEC – Onshore) will be located in East Hampton, New York. The SFEC – NYS will be connected to the SFEC – Onshore via the sea-to-shore transition where the offshore and onshore cables will be spliced together. The SFEC also includes a new Interconnection Facility where the SFEC will interconnect with the Long Island Power Authority (LIPA) electric transmission and distribution system in the town of East Hampton, New York.

The approximate location of the entire Project is shown on Figure ES-1. The landing site options and route variants of the SFEC – Onshore are shown on Figure ES-2.

The Project is scheduled to be installed during 2021 and 2022, and to be commissioned and operational by the end of 2022.

The Project components and locations presented in this COP have been selected based on environmental and engineering site characterization studies completed to date and will be refined in the Facility Design Report (FDR) and Fabrication and Installation Report (FIR), which will be reviewed by BOEM pursuant to Title 30 of the *Code of Federal Regulations* (CFR) Parts 585.700-702 before the commencement of installation. In addition, a Certified Verification Agent (CVA), approved by BOEM, will conduct an independent assessment and verify that the Project components are fabricated and installed in accordance with both this COP and the FIR.

The purpose of the Project is to generate electricity from an offshore wind farm located in the Lease Area and to transmit it to the East Hampton Substation. The Project addresses the need identified by the LIPA for new sources of power generation that can cost-effectively and reliably supply the South Fork of Suffolk County, Long Island, as an alternative to constructing new transmission facilities. The Project will also help LIPA achieve its renewable energy goals. The Project will enable DWSF to fulfill its contractual commitments to LIPA

¹ The leaseholder of Renewable Energy Lease Area OCS-A 0517 is DWSF. This Lease Area was previously part of OCS-A 0486. The leaseholder of OCS-A 0486 is Deepwater Wind New England, LLC. Deepwater Wind New England, LLC has requested that BOEM assign a portion of its lease to DWSF.

pursuant to a Power Purchase Agreement executed in 2017 resulting from LIPA's technology-neutral competitive bidding process.

This COP includes the following information:

- An overview of the Project, including details on the regulatory framework in which the Project will be reviewed, a description of the agency and stakeholder outreach, a tentative schedule and other key project information requested by BOEM (Section 1);
- A summary of the siting and route selection process for both the SFWF and SFEC, including a siting history, details on steps taken to identify and evaluate potential SFEC routes, and description of technologies and installation methods considered (Section 2);
- A description of all planned facilities, including onshore and support facilities; and all proposed activities, including construction activities, commercial O&M, and conceptual decommissioning plans (Section 3); and
- A characterization and assessment of potential impacts during construction, O&M, and decommissioning activities, which will support relevant project reviews and consultations (Section 4).

This COP was prepared in accordance with 30 CFR § 585. BOEM is expected to be the lead federal agency under the National Environmental Policy Act (NEPA). For activities related to the SFEC – NYS and SFEC – Onshore in New York State, the New York Public Service Commission will lead the review of the Project activities under Article VII of the New York Public Service Law.

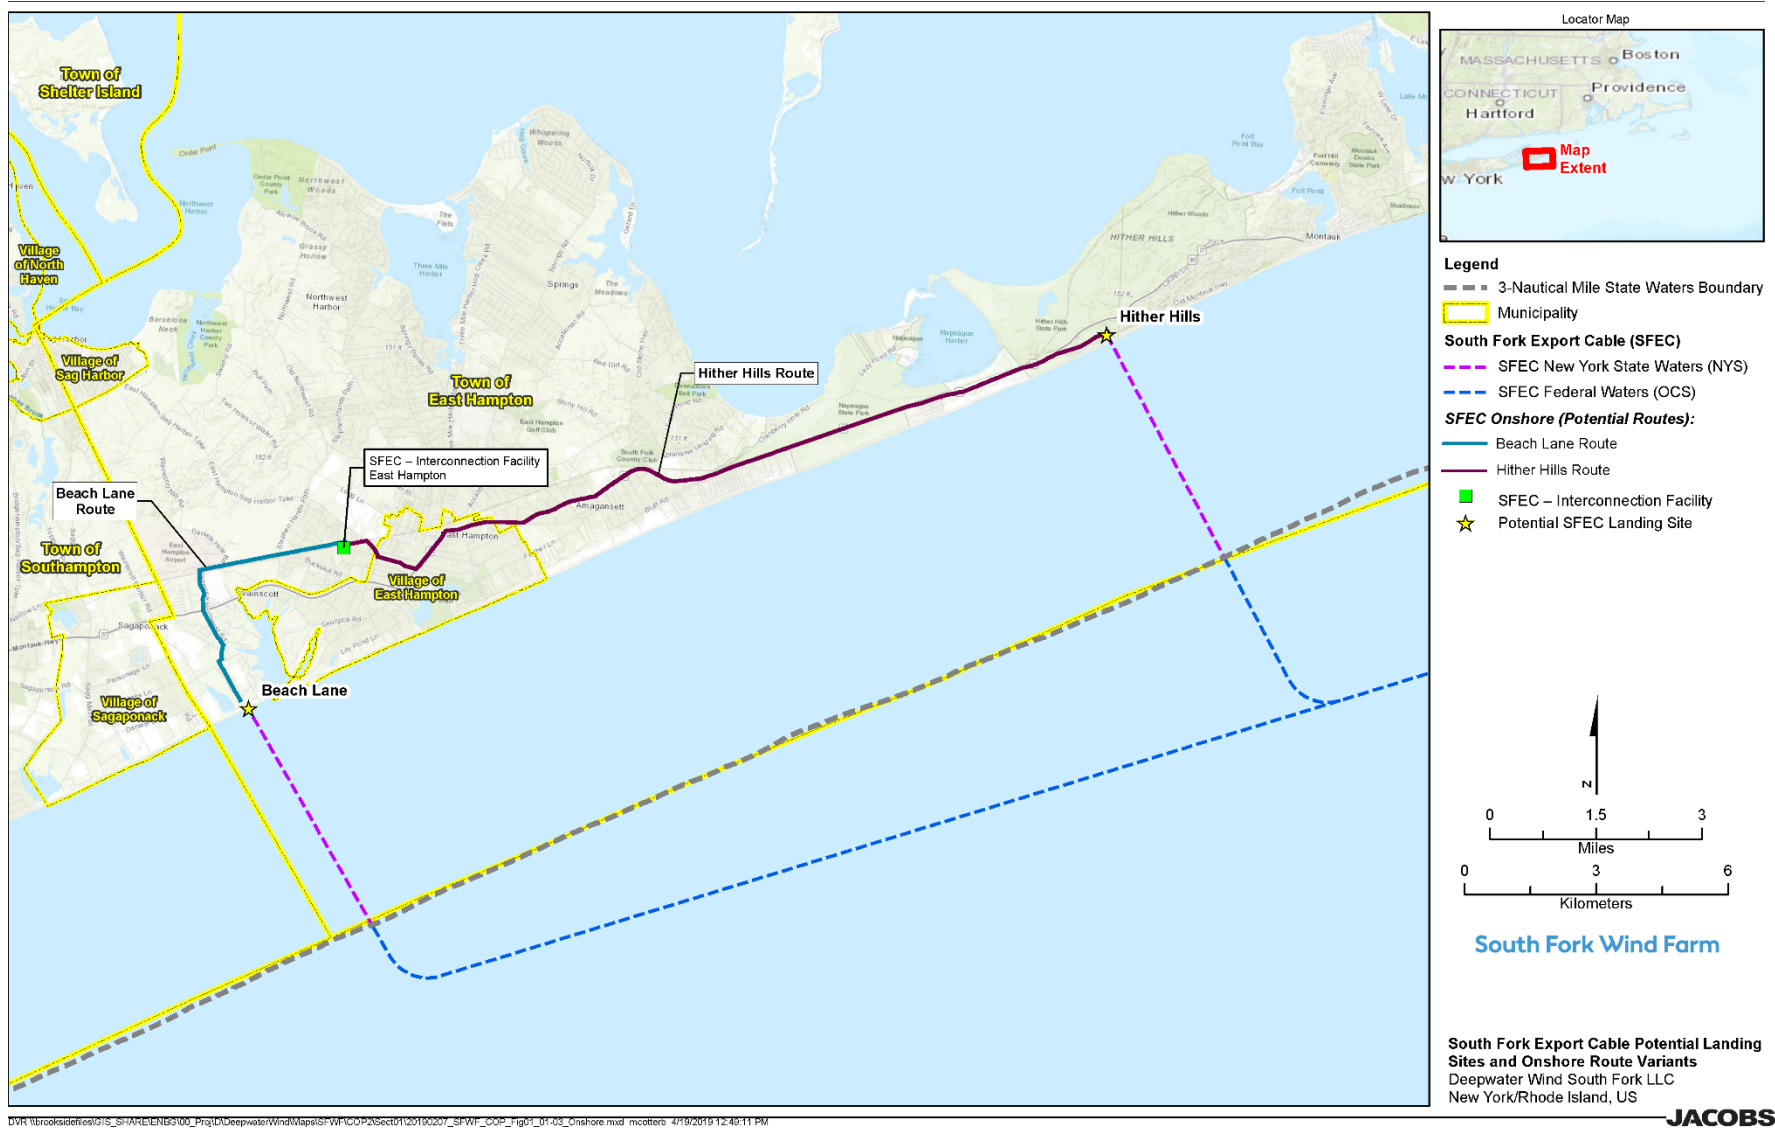

In addition to the federal and state level permits, the Project must also comply with applicable provisions of the Endangered Species Act, the Marine Mammals Protection Act, the Migratory Bird Treaty Act, the Magnuson-Stevens Fishery Conservation and Management Act, the National Historic Preservation Act, the Coastal Zone Management Act, the Clean Air Act, the Rivers & Harbors Act, and the Clean Water Act.

Since 2010, DWSF has conducted a variety of activities that have informed the design and characteristics of the Project. For example, DWSF has:

- Engaged in outreach relating to the Project with federal and state agencies, federally-recognized Native American tribes, municipal organizations in East Hampton, New York, stakeholders representing a broad range of perspectives, and the public.
- Evaluated several offshore and onshore cable routes and substation locations to fulfill the Project's objective to deliver power into eastern Long Island, New York.
- Completed geophysical and geotechnical surveys in 2017 and 2018 to inform a site characterization of the Project. These surveys were conducted for both the SFWF and along multiple routes considered for the SFEC. Where possible, the Project was sited to avoid areas with boulders, and to avoid or minimize impacts to commercial fishing areas, archaeological resources, and shallow hazards.
- Completed extensive studies and assessments in 2017 and 2018 to characterize the offshore resources that may be impacted by construction and installation, O&M, and decommissioning activities.
- Completed conceptual engineering and planning discussions with municipal and state agencies to identify potential landing sites and conducted field surveys for multiple onshore route options from the landing sites to the SFEC – Interconnection Facility.

Consistent with BOEM's *Draft Guidance Regarding the Use of a Project Design Envelope in a Construction and Operations Plan* (January 2018), DWSF considered several potential technologies and installation methods for the SFWF and SFEC. This envelope approach results in a range of characteristics and locations for components that will be considered in the environmental review for the Project. The key characteristics for the Project, which may include relevant variations in the Project Envelope, are:

- SFWF foundation type (monopile, with pile diameter up to 11 m diameter).
- SFWF WTG size (6 to 12 megawatts [MW]). DWSF has committed to an indicative layout scenario with WTG sited in a grid with approximately 1.15 mile (1.8 km, 1 nm) by 1.15 mile (1.8 km, 1 nm) spacing that aligns with other proposed adjacent offshore wind projects in the Rhode Island/Massachusetts Wind Energy Area.
- SFEC landing site (Beach Lane or Hither Hills).
- SFEC installation method for offshore cable (installed via mechanical cutter, mechanical plow, and/or jet-plow to achieve the target burial depth of 4 to 6 feet (1.22 to 1.83 meters [m])).
- SFEC installation method for sea-to-shore transition (a conduit installed by horizontal directional drilling [HDD] under the beach and intertidal water; may also include a temporary cofferdam located offshore beyond the intertidal zone).

This COP includes site characterization and assessment of potential impacts for the Project and recognizes that impacts may be different for the SFWF and SFEC during the phases of construction, operations and maintenance and decommissioning. The assessment is based upon the requirements set forth in 30 CFR § 585.627 and is also informed by input from federal and

state agencies and other public and private stakeholders in the region. The approach to characterization and assessment included several steps:

- **Impact-producing Factors (IPFs):** Project activities that could impact resources were identified as IPFs, which include seafloor and land disturbance; sediment suspension and deposition; noise; electric and magnetic fields; discharges and releases; trash and debris; traffic; air emissions; visible structures; and lighting.
- **Affected Environment:** Physical, biological, cultural, visual, and socioeconomic resources were characterized based upon extensive desktop studies, targeted field studies, predictive modeling, and data analysis. These assessments provided a detailed background on the condition of these resources in the affected environment. Desktop studies included literature reviews; examination of publicly-available datasets; direct communication with academic and government science researchers; and consultation with state and federal government entities.

The Rhode Island Ocean Special Area Management Plan, the New York Ocean Plan, and the Massachusetts Ocean Plan provided important insight on environmental conditions and existing human activities in and near the SFWF and SFEC. The resource characterizations also relied on the material published in recent BOEM NEPA documents, such as the *Final Programmatic Environmental Impact Statement (PEIS) for Alternative Energy Development and Production and Alternate Use of Facilities on the Outer Continental Shelf* (BOEM, 2007).

- **Impact Assessment:** The type and degree of potential impacts from proposed Project activities varies based on the characteristics of the resource (e.g., presence/absence, conservation status, abundance) and the IPF that may affect each resource. Potential impacts are discussed separately for the SFWF and SFEC. Where relevant and distinct, potential impacts for different segments of the SFEC are discussed separately. Where applicable, potential impacts were identified as direct or indirect; short term or long term; and negligible, minor, moderate, or major. If measures are proposed to avoid and minimize potential impacts, the impact evaluation included consideration of these environmental protection measures.

The SFWF and SFEC were sited, planned, and designed to avoid and minimize impacts. Most potential impacts to affected physical, biological, cultural, visual, and socioeconomic resources will be mitigated. Resources that may be impacted by the SFWF and SFEC are expected to recover given that impacts will be limited temporally and/or spatially.

Table ES-1 summarizes the potential impacts expected from the implementation of the activities described in this COP and the environmental protection measures that DWSF will adopt to minimize these potential impacts.

Table ES-1. Summary of Potential Impacts and Environmental Protection Measures, by Resource

| Resource | Potential Impacts by IPF | Environmental Protection Measures |
|---------------|--|---|
| Air Quality | <ul style="list-style-type: none"> ● Seafloor and Land Disturbance: No Impact ● Sediment Suspension and Deposition: No Impact ● Noise: No Impact ● Electromagnetic Field: No Impact ● Discharges and Releases: No Impact ● Trash and Debris: No Impact ● Traffic: No Impact ● Air Emissions: Negligible – Minor ● Visible Structures: No Impact ● Lighting: No Impact | <ul style="list-style-type: none"> ● Vessels providing construction or maintenance services for the SFWF will use low sulfur fuel where possible. ● Vessel engines will meet the appropriate EPA air emission standards for nitrogen oxide emissions when operating within Emission Controls Areas. ● Equipment and fuel suppliers will provide equipment and fuels that comply with the applicable U.S. Environmental Protection Agency or equivalent emission standards. ● Marine engines with a model year of 2007 or later and non-road engines complying with the Tier 3 standards (in 40 CFR 89 or 1039) will be used to satisfy BACT. ● The use of wind to generate electricity reduces the need for electricity generation from new traditional fossil fuel powered plants on the South Fork of Long Island that produce greenhouse gas emissions. |
| Water Quality | <ul style="list-style-type: none"> ● Seafloor and Land Disturbance: Negligible - Minor ● Sediment Suspension and Deposition: Negligible – Minor ● Noise: No Impact ● Electromagnetic Field: No Impact ● Discharges and Releases: Negligible ● Trash and Debris: Negligible ● Traffic: No Impact ● Air Emissions: No Impact ● Visible Structures: No Impact ● Lighting: No Impact | <ul style="list-style-type: none"> ● Installation of the SFWF Inter-array Cable and SFEC - Offshore will occur using equipment such as mechanical cutter, mechanical plow, and/or jet plow. Compared to open cut dredging, this method will minimize turbidity and total suspended solids. ● Vessels will comply with regulatory requirements related to the prevention and control of discharges and accidental spills. ● Accidental spill or release of oils or other hazardous materials will be managed through the Oil Spill Response Plan (OSRP) (Appendix D). ● At the onshore HDD work area for the SFEC, drilling fluids will be managed within a contained system to be collected for reuse as necessary ● An HDD Inadvertent Release Plan will minimize the potential risks associated with release of drilling fluids or a frac-out. ● A Stormwater Pollution Prevention Plan, including erosion and sedimentation control measures, and a Spill Prevention, Control, |

Glossary and Terms

| Term | Definition |
|--|---|
| Certified Verification Agent (CVA) | An individual or organization, experienced in the design, fabrication, and installation of offshore marine facilities or structures, who will conduct specified third-party reviews, inspections, and verifications in accordance with 30 CFR 585.705. |
| Deepwater Wind South Fork, LLC (DWSF) | Owner and future operator of the Project, the Project Applicant. |
| Environmental Protection Measure (EPM) | Measure proposed to avoid or minimize potential impacts. |
| Foundation | The bases to which the WTGs and OSS are installed on the seabed. Three types of foundations have been considered and reviewed for the project: jacket, monopile, or gravity-based structure (GBS). Monopile is the selected foundation type for the project. |
| horizontal directional drill (HDD) | Subsurface installation technique that will create an underground conduit through which the SFEC – Offshore will come ashore and join the SFEC - Onshore within a transition vault (i.e., the sea-to-shore transition). HDD avoids impacts to the beach and near shore environment. |
| Jet plow | Method of submarine cable installation equipment that primarily uses water jets to fluidize soil, temporarily opening a channel to enable the cable to be lowered under its own weight or be pushed to the bottom of the trench via a cable depressor. |
| Impact determinations | Direct or indirect; short term or long term; and negligible, minor, moderate, or major. |
| Impact Producing Factor (IPF) | Project activities and infrastructure that could impact resources were identified as IPFs. |
| Inter-array Cable | AC cable that connects individual WTGs and transfers power between the WTGs and the OSS. The cable contains three conductors and a series of screens, insulators, fillers, sheathing, armor, and fiber optic communications cables. |
| Landing site | Locations on the shore of East Hampton, New York considered for the Sea-to-Shore Transition. |
| Mechanical cutter | Method of submarine cable installation equipment that involves a cutting wheel or excavation chain to cut a narrow trench into the seabed allowing the cable to sink under its own weight or be pushed to the bottom of the trench via a cable depressor. |

| Term | Definition |
|---|---|
| Mechanical plow | Method of submarine cable installation equipment that involves pulling a plow along the cable route to lay and bury the cable. The plow's share cuts into the soil, opening a temporary trench which is held open by the side walls of the share, while the cable is lowered to the base of the trench via a depressor. Some plows may use additional jets to fluidize the soil in front of the share. |
| Offshore Substation (OSS) | Collects electric energy generated by the WTG through the Inter-array Cables for transmission through the SFEC. Mounted on dedicated foundation or co-located on one foundation with a WTG. |
| Operations and Maintenance (O&M) Facility | An ancillary facility of the SFWF that will be located either in a port in Montauk in East Hampton, New York or at Quonset Point in North Kingstown, Rhode Island. The SFWF O&M facility will support remote monitoring of the wind farm and offshore maintenance activities. |
| Power Purchase Agreement (PPA) | A financial agreement between two parties. This Project has a PPA with Long Island Power Authority. |
| pre-lay grapnel run (PLGR) | Process to remove possible obstructions and debris, such as abandoned fishing nets, wires, and hawsers, along the inter-array and SFEC - Offshore. |
| scour protection | Consists of engineered rock that may be placed at the base of each foundation to prevent undesirable seabed erosion. |
| Sea-to-Shore Transition | Connects the SFEC – NYS to the SFEC - Onshore. Comprised of the onshore transition vault where the offshore cable and the onshore cable will be spliced together and the underground conduit that leads from onshore transition vault to the exit point of the horizontal directional drill (HDD). |
| SFEC – Interconnection Facility | New facility to be located adjacent to the existing LIPA East Hampton substation. This facility is also referred to as “SFEC Onshore Substation” in the COP Appendices. |
| SFEC - Offshore | <p>The export cable located in both federal waters (SFEC – OCS) and New York State territorial waters (SFEC – NYS), and the sea-to-shore transition vault in East Hampton, New York.</p> <ul style="list-style-type: none"> – SFEC – OCS: the submarine segment of the export cable buried beneath the seabed within federal waters on the OCS from the OSS to the boundary of New York State territorial waters. – SFEC – NYS: the submarine segment of the export cable buried beneath the seabed within state territorial waters from the boundary of New York State territorial waters to a sea-to-shore transition vault located in the town of East Hampton on Long Island, Suffolk County, New York. |
| SFEC - Onshore | The terrestrial underground segment of the export cable from the sea-to-shore transition vault to a new SFEC - Interconnection Facility where the SFEC will interconnect with the Long Island Power Authority (LIPA) electric transmission and distribution system in the town of East Hampton on Long Island, Suffolk County, New York. |

| Term | Definition |
|--|--|
| South Fork Export Cable (SFEC) | Comprised of an alternating current (AC) electric cable that will connect the SFWF to the existing mainland electric grid in East Hampton, New York. The SFEC includes both the SFEC – Offshore and SFEC – Onshore. |
| South Fork Wind Farm (SFWF) | Comprised of up to 15 wind turbine generators (WTGs, turbines), submarine cables between the WTGs (Inter-array Cables), and an offshore substation (OSS), all of which will be located within federal waters on the outer continental shelf (OCS). SFWF also includes an Operations and Maintenance (O&M) facility that will be located onshore. |
| Supervisory Control and Data Acquisition (SCADA) | Fiber optic system embedded in the Project cables that provides remote wind farm monitoring and control between the WTG, substations, and remote operation center(s). The SCADA provides a live status of environmental conditions within the SFWF, as well as mechanical and electrical state of each WTG. |
| Wind Turbine Generator (WTG) | Electricity-generating wind turbine made of a tower, nacelle, rotor, and blades, with a nameplate capacity of 6 to 12 megawatts (MW) per turbine. |

Section 1—Introduction

This Construction and Operations Plan (COP) is being submitted by Deepwater Wind South Fork, LLC (DWSF, the Applicant) to support the siting and development of the South Fork Wind Farm (SFWF) and the South Fork Export Cable (SFEC), collectively the Project.

The purpose of this COP is to provide information about the Project to the Bureau of Ocean Energy Management (BOEM) and other federal and state agencies. The COP was prepared in accordance with Title 30 of the *Code of Federal Regulations* (CFR) Part 585 (30 CFR § 585), BOEM's *Guidelines for Information Requirements for a Renewable Energy Construction and Operations Plan (COP)* (BOEM, 2016), and other BOEM policy, guidance and regulations as summarized in Table 1.0-1. Table 1.0-2 includes the relevant lease stipulations for the Project. The COP includes the following:

- A description of all planned facilities, including onshore and support facilities
- A description of all proposed activities, including construction activities, commercial operations, maintenance, and conceptual decommissioning plans
- The basis for the analysis of the environmental and socioeconomic impacts and operational integrity of the proposed construction, operation, maintenance, and decommissioning activities
- Information to support relevant federal permit applications and consultations.

This page intentionally left blank.

Table 1.0-1. Summary of Information Requirements for a Construction and Operations Plan

Details on the federal requirements for a COP and where to find relevant information for the SFWF and SFEC

| Requirement | Compliance Statement/Location within COP |
|---|--|
| 30 CFR §585.105(a) | |
| 1) Design your projects and conduct all activities in a manner that ensures safety and will not cause undue harm or damage to natural resources, including their physical, atmospheric, and biological components to the extent practicable; and take measures to prevent unauthorized discharge of pollutants including marine trash and debris into the offshore environment. | Sections 1-4 Appendices A-AA |
| 30 CFR §585.621(a-g) | |
| a) The project will conform to all applicable laws, implementing regulations, lease provisions, and stipulations or conditions of the lease. | Section 1.3, Regulatory Framework |
| b) The project will be safe. | Appendix E, Safety Management System Appendix F, Project Supplemental Information Appendix G, Project Plans and Conceptual Drawings Appendix H, Geophysical and Geotechnical Survey Reports Appendix X, Navigational Safety Risk Assessment |
| c) The project will not unreasonably interfere with other uses of the outer continental shelf (OCS), including those involved with National security or defense. | Section 4.6.4, Recreation and Tourism Section 4.6.5, Commercial and Recreational Fishing Section 4.6.6, Commercial Shipping Section 4.6.7, Coastal Land Use and Infrastructure Section 4.6.8, Other Marine Uses Appendix X, Navigational Safety Risk Assessment |

Table 1.0-1. Summary of Information Requirements for a Construction and Operations Plan

Details on the federal requirements for a COP and where to find relevant information for the SFWF and SFEC

| Requirement | Compliance Statement/Location within COP |
|---|---|
| d) The project will not cause undue harm or damage to natural resources; life (including human and wildlife); property; the marine, coastal, or human environment; or sites, structures, or objects of historical or archeological significance. | Executive Summary, specifically Table ES-1 Section 4, Site Characterization and Assessment of Potential Impacts |
| e) The project will use the best available and safest technology. | Section 2.3 Appendix G, Project Plans and Conceptual Drawings |
| f) The project will use best management practices. | Executive Summary, specifically Table ES-1 Section 4.7, Summary of Potential Impacts and Environmental Protection Measures |
| g) The project will use properly trained personnel. | DWSF will comply. |
| <i>30 CFR § 585.626(a) - You must submit the results of the following surveys for the proposed site(s) of your facility(ies). Your COP must include the following information:</i> | |
| 1) Shallow hazards: The results of the shallow hazards survey with supporting data. Information sufficient to determine the presence of the following features and their likely effects on your proposed facility, including: (i) Shallow faults; (ii) Gas seeps or shallow gas; (iii) Slump blocks or slump sediments; (iv) Hydrates; or (v) Ice scour of seabed sediments. | Appendix H, Geophysical and Geotechnical Survey Reports |

Table 1.0-1. Summary of Information Requirements for a Construction and Operations Plan

|---|--|---|
| | Sea turtles. | Section 4.3.5, Sea Turtles Appendix P1, Assessment of Impacts to Marine Mammals, Sea Turtles and Sturgeon Appendix P2, Animal Exposure Modelling for Foundation Installation |
| | Sea birds. | Section 4.3.6, Avian Species Appendix Q, Avian and Bat Risk Assessment |
| 4) Geotechnical survey: The results of your sediment testing program with supporting data, the various field and laboratory test methods employed, and the applicability of these methods as they pertain to the quality of the samples, the type of sediment, and the anticipated design application. You must explain how the engineering properties of each sediment stratum impact the design of your facility. In your explanation, you must describe the uncertainties inherent in your overall testing program, and the reliability and applicability of each test method. | <p>(i) The results of a testing program used to investigate the stratigraphic and engineering properties of the sediment that may impact the foundations or anchoring systems for your facility.</p> <p>(ii) The results of adequate <i>in situ</i> testing, boring, and sampling at each foundation location, to examine all important sediment and rock strata to determine its strength classification, deformation properties, and dynamic characteristics.</p> <p>(iii) The results of a minimum of one deep boring (with soil sampling and testing) at each edge of the project area and within the project area as needed to determine the vertical and lateral variation in seabed conditions and to provide the relevant geotechnical data required for design.</p> | <p>Section 4.2.3, Geological Resources Appendix H, Geophysical and Geotechnical Survey Reports Appendix I, Hydrodynamic and Sediment Transport Modeling Results</p> <p>DWSF has requested to submit additional information necessary to satisfy 30 CFR §§ 585.626(a)(4)(ii) following completion of additional survey in that area.</p> |

|---|---|--|
| | (x) Settlements and displacements; | |
| | (xi) Plastic deformation and formation collapse mechanisms; and | |
| | (xii) Sediment reactions on the facility foundations or anchoring systems. | |
| 30 CFR § 585.626(b) - Your COP must include the following project-specific information, as applicable. | | |
| 1) Contact Information. | The name, address, e-mail address, and phone number of an authorized representative. | Section 1.6.1, Authorized Representative and Operator |
| 2) Designation of operator, if applicable | As provided in § 585.405. | Section 1.6.1, Authorized Representative and Operator |
| 3) The construction and operation concept | A discussion of the objectives, | Section 1.2, Project Purpose |
| | Description of the proposed activities, | Section 1.1, Project Overview Section 3, Project Description |
| | Tentative schedule from start to completion, and | Section 1.5, Tentative Schedule |
| | Plans for phased development, as provided in § 585.629. | Not applicable - the Project is a single, complete, and independent project that will not be developed in phases |
| 4) Commercial lease stipulations and compliance | A description of the measures you took, or will take, to satisfy the conditions of any lease stipulations related to your proposed activities. | Section 1.1, Project Overview, Table 1.0-2 |
| 5) A location plat | The surface location and water depth for all proposed structures, facilities, and appurtenances located both offshore and onshore, including all anchor/mooring data. | Section 1.1, Project Overview, Figure 1.1-1 Appendix F, Project Supplemental Information Appendix G, Project Engineering Plans and Construction Drawings |

Table 1.0-1. Summary of Information Requirements for a Construction and Operations Plan

Table 1.0-2. Summary of Lease Requirements for SFWF and SFEC

Details on the lease terms and stipulations relevant to construction and operations for SFWF and SFEC

| Lease Requirements | Description | Compliance Statement/ Location within COP |
|---|--|--|
| Section 4: Payments (a) | The lessee must make all rent payments to the Lessor in accordance with applicable regulations, unless otherwise specified Appendix B. | DWSF will comply. |
| Section 4: Payments (b) | The Lessee must make all operating fee payments to the Lessor in accordance with applicable regulations in 30 CFR Part 585, as specified in Addendum “B”. | DWSF will comply. |
| Section 5: Plans | The Lessee may conduct those activities described in Addendum “A” only in accordance with a Site Assessment Plan (SAP) or COP approved by the Lessor. The Lessee may not deviate from an approved SAP or COP except as provided in applicable regulations in 30 CFR Part 585. | Understood. |
| Section 6: Associated Project Easements | <p>Pursuant to 30 CFR 585.200(b), the Lessee has the right to one or more project easements, without further competition, for the purpose of installing, gathering, transmission, and distribution cables, pipelines, and appurtenances on the OCS, as necessary for the full enjoyment of the lease, and under applicable regulations in 30 CFR Part 585. As part of submitting a COP for approval, the Lessee may request that one or more easement(s) be granted by the Lessor.</p> <p>If the Lessee requests that one or more easements be granted when submitting a COP for approval, such project easements will be granted by the Lessor in accordance with the Act and applicable regulations in 30 CFR Part 585 upon approval of the COP in which the Lessee has demonstrated a need for such easements. Such easements must be in a location acceptable to the Lessor and will be subject to such conditions as the Lessor may require. The project easements that would be issued in conjunction with an approved COP under this lease will be described in Addendum “D” to this lease, which will be updated as necessary.</p> | With approval of this COP, DWSF requests that BOEM issue a project easement for the portions of SFEC located in federal waters, under the applicable regulations in 30 CFR Part 585. |

Table 1.0-2. Summary of Lease Requirements for SFWF and SFEC

Details on the lease terms and stipulations relevant to construction and operations for SFWF and SFEC

| Lease Requirements | Description | Compliance Statement/ Location within COP |
|---|--|---|
| Section 7: Conduct of Activities | The Lessee must conduct, and agrees to conduct, all activities in the leased area in accordance with an approved SAP or COP, and with all applicable laws and regulations. | DWSF will comply. |
| Section 10: Financial Assurance | The Lessee must provide and maintain at all times a surety bond(s) or other form(s) of financial assurance approved by the Lessor in the amount specified in Addendum “B.” | Section 1.6.2, Financial Assurance |
| Section 13: Removal of Property and Restoration of the Leased Area on Termination of Lease. | Unless otherwise authorized by the Lessor, pursuant to the applicable regulations in 30 CFR Part 585, the Lessee must remove or decommission all facilities, projects, cables, pipelines, and obstructions and clear the seabed of all obstructions created by activities on the leased area, including any project easements within two years following lease termination, whether by expiration, cancellation, contraction, or relinquishment, in accordance with any approved SAP, COP, or approved Decommissioning Application, and applicable regulations in 30 CFR Part 585. | Section 3.1.6, (SFWF) Conceptual Decommissioning Section 3.2.6, (SFEC) Conceptual Decommissioning |
| Section 14: Safety Requirements | The Lessee must (a) Maintain all places of employment for activities authorized under this lease in compliance with occupational safety and health standards and, in addition, free from recognized hazards to employees of the Lessee or of any contractor or subcontractor operating under this lease; (b) Maintain all operations within the leased areas in compliance with regulations in 30 CFR Part 585 and orders from the Lessor and other Federal agencies with jurisdiction, intended to protect persons, property and the environment on the OCS; and (c) Provide any requested documents and records, which are pertinent to occupational or public health, safety, or environmental protection, and allow prompt access, at the site of any operation or activity conducted under this lease, to any inspector authorized by the Lessor or other Federal agency with jurisdiction. | Section 1.3, Regulatory Framework Appendix E, Safety Management System Appendix F, Project Supplemental Information Appendix G, Project Engineering Plans and Construction Drawings Appendix H, Geophysical and Geotechnical Survey Reports |

Table 1.0-2. Summary of Lease Requirements for SFWF and SFEC

Details on the lease terms and stipulations relevant to construction and operations for SFWF and SFEC

| Lease Requirements | Description | Compliance Statement/ Location within COP |
|--|---|---|
| Section 15: Debarment Compliance | The Lessee must comply with the Department of the Interior’s non-procurement debarment and suspension regulations set forth in 2 CFR Parts 180 and 1400 and must communicate the requirement to comply with these regulations to persons with whom it does business related to this lease by including this requirement in all relevant contracts and transactions. | DWSF will comply. |
| Section 16: Notices | All notices or reports provided from one party to the other under the terms of this lease must be in writing except as provided herein and in the applicable regulations in 30 CFR Part 585. Written notices must be delivered to the party’s Lease Representative, as specifically listed in Addendum “A,” either electronically, by hand, by facsimile, or by United States first class mail, adequate postage prepaid. Either party may notify the other of a change of address by doing so in writing. Until notice of any change of address is delivered as provided in this section, the last recorded address of either party will be deemed the address for all notices required under this lease. For all operational matters, notices must be provided to the party’s Operations Representative, as specifically listed in Addendum “A,” as well as the Lease Representative. | DWSF will comply. |
| Addendum B - Lease Term and Financial Schedule; Section III - Payments: | Unless otherwise authorized by the Lessor in accordance with the applicable regulations in 30 CFR Part 585, the Lessee must make payments as described below (see Lease document for payment schedule). | DWSF will comply. |

1.1 Project Overview

DWSF will be responsible for the construction, operations and maintenance (O&M), and decommissioning of the Project, which consists of the following components:

- **South Fork Wind Farm (SFWF):** includes up to 15 wind turbine generators (WTGs, turbines) with a nameplate capacity of 6 to 12 megawatts (MW) per turbine, submarine cables between the WTGs (Inter-array Cables), and an offshore substation (OSS), all of which will be located within federal waters on the OCS, specifically in BOEM Renewable Energy Lease Area OCS-A 0517 (Lease Area),² approximately 19 miles (30.6 kilometers [km], 16.6 nautical miles [nm]) southeast of Block Island, Rhode Island, and 35 miles (56.3 km, 30.4 nm) east of Montauk Point, New York. The SFWF also includes an O&M facility that will be located onshore at either Montauk in East Hampton, New York or Quonset Point in North Kingstown, Rhode Island.
- **South Fork Export Cable (SFEC):** an alternating current (AC) electric cable that will connect the SFWF to the existing mainland electric grid in East Hampton, New York. The SFEC includes both offshore and onshore segments.
 - **SFEC - OCS:** the submarine segment of the export cable buried beneath the seabed within federal waters on the OCS from the OSS to the boundary of New York State territorial waters.
 - **SFEC - New York State (NYS):** the submarine segment of the export cable buried beneath the seabed within state territorial waters from the boundary of New York State waters to a sea-to-shore transition vault located in the Town of East Hampton on Long Island, Suffolk County, New York. The SFEC - NYS includes the sea-to-shore transition.
 - **SFEC - Onshore:** the terrestrial underground segment of the export cable from the sea-to-shore transition vault to the interconnection facility where the SFEC will interconnect with the Long Island Power Authority (LIPA) electric transmission and distribution system East Hampton. The SFEC - Onshore includes the SFEC - Interconnection Facility.

The general operational concept for the Project is shown on Figure 1.1-1. The kinetic energy in the wind turns the WTG rotor by creating lift on the blades to generate electricity. Electricity generated from each WTG is collected through a series of Inter-array Cables that terminate at an offshore substation. The offshore substation connects to an export cable that carries the power to the onshore interconnection facility, which will connect to an existing substation where power is transmitted to the electric grid.

The approximate location of the Project is shown on Figure 1.1-2.

DWSF has committed to an indicative layout scenario with WTGs sited in a grid with approximately 1.15 mile (1.9 km, 1.0 nm) by 1.15 mile (1.9 km, 1.0 nm) spacing that aligns with other proposed adjacent offshore wind projects in the Rhode Island/Massachusetts Wind Energy Area (RI-MA WEA).

² The leaseholder of Renewable Energy Lease Area OCS-A 0517 is DWSF. This Lease Area was previously part of OCS-A 0486. The leaseholder of OCS-A 0486 is Deepwater Wind New England, LLC. In January 2020 Deepwater Wind New England, LLC requested that BOEM assign a portion of Lease Area OCS-A 0486 to DWSF to be given the designation OCS-A 0517.

The proposed location of the SFEC - NYS and SFEC - Onshore, including two landing sites, are shown in detail on Figure 1.1-3. Section 3 provides a detailed description of the SFWF and SFEC.

Port facilities in New York, Rhode Island, Massachusetts, Connecticut, New Jersey, Maryland, and/or Virginia may be utilized to support construction, O&M, and decommissioning (described in Section 3.1.3.1).

1.2 Project Purpose

The purpose of the Project is to generate electricity from an offshore wind farm located in the Lease Area and to transmit it to the East Hampton Substation. The Project addresses the need identified by the LIPA for new sources of power generation that can cost-effectively and reliably supply the South Fork of Suffolk County, Long Island, as an alternative to constructing new transmission facilities. The Project will also help LIPA achieve its renewable energy goals. The Project will enable DWSF to fulfill its contractual commitments to LIPA pursuant to a Power Purchase Agreement (PPA) executed in 2017 resulting from LIPA's technology-neutral competitive bidding process.

1.3 Regulatory Framework

As described in Section 1.1, Project components are proposed in federal waters on the OCS, waters of New York State, and at onshore locations in Long Island, New York. As a result, multiple federal and state agencies have regulatory authority over components of the Project. The SFWF and SFEC - OCS are proposed in federal waters on the OCS. The SFEC - NYS and SFEC - Onshore are proposed in waters of New York State, and onshore in New York State, respectively.

BOEM has the responsibility to regulate activities associated with the production, transportation, or transmission of renewable energy resources on the OCS under the Outer Continental Shelf Lands Act (OCS Lands Act) (43 U.S.C. § 1337). Associated with this authority, BOEM has issued a lease to the Applicant to develop renewable energy projects within the Lease Area. With approval of this COP, DWSF requests that BOEM issue a project easement for the portions of the SFEC located in federal waters. In addition, BOEM is expected to be the lead federal agency during the review of the Project under the NEPA.

The New York State Department of Public Service Commission (NYSPSC) will lead the review of the SFEC - NYS and SFEC - Onshore within the territory of the State of New York under Article VII of the New York Public Service Law (PSL), which will include review under Section 401 of the Clean Water Act of 1972 (CWA).

Table 1.3-1 includes a list of the required federal and state permits and approvals, and the date of anticipated issuance. A listing of agency consultations relating to those permits and approvals are included in Table 1.4-1. Due to the preemptive effect of PSL § 130, the procedural requirements to obtain any local approval, consent, permit, certificate or other condition for the construction and operation of the Project do not apply.

1.3.1 Federal Permits, Approvals, and Consultations

The construction and operation of the Project will require a COP that is compliant with BOEM regulations (30 CFR § 585) and approved by BOEM prior to the start of construction.

The Applicant will also obtain various other federal approvals including:

- USACE Individual Permit
 - Clean Water Act Section 404 (33 U.S.C. § 1344) - Required for activities associated with the discharge of dredged or fill material in waters of the United States, in accordance with 33 CFR 328.4. These activities may include side-casting of material during installation of the SFEC, temporary excavation material associated with a temporary offshore cofferdam, placement of concrete matting associated with cable protection, and any

temporary or permanent fill associated with the SFEC – Onshore. In addition, installation of the O&M Facility at Montuak may include dredging (Appendix BB3).

- Rivers and Harbors Act of 1899 Section 10 (33 U.S.C. § 403) - Required for all structures and work conducted in waters of the United States, as well as fixed structures on the OCS. These activities include installation of foundations on the OCS, as well as installation of the SFEC under the seabed.
- U.S. Environmental Protection Agency (EPA) Clean Air Act (CAA) Outer Continental Shelf Air Permit(42 U.S.C. § 7627; 40 CFR Part 55, 60) – EPA regulates air quality on the OCS, including emissions from the construction, operation, and decommissioning of the SFWF and SFEC, including any equipment, activity, or facility that emits, or has the potential to emit, any air pollutant; is regulated or authorized under the OCS Lands Act; and is located on the OCS or in or on waters above the OCS. This definition includes vessels when they are permanently or temporarily attached to the seabed (40 CFR 55.2), as well as vessels associated with the Project while operating at the SFWF or within 25 nm (46.3 km) of the activity.
- National Marine Fisheries Service (NMFS) Marine Mammal Protection Act (MMPA) Incidental Harassment Authorization (IHA) - For the unintentional “take” of marine mammals incidental to certain noise producing activities associated with the Project, including pile driving.

The Project is also required to undergo environmental review under NEPA (42 U.S.C. § 4321 *et seq.*) and comply with a variety of other federal regulations. Consultation and review will occur with NMFS under the Magnuson-Stevens Fisheries Conservation and Management Act and the Marine Mammal Protection Act; with U.S. Fish and Wildlife Service (USFWS) and NMFS under Section 7 of the ESA; with National Park Service (NPS) for the Abandoned Shipwreck Act; and with the USCG, the U.S. Department of Defense, and the Bureau of Safety and Environmental Enforcement (BSEE). In addition, federal agency review of the Project must also occur under Section 106 of the NHPA and Section 307 of the CZMA.

1.3.2 National Environmental Policy Act

The NEPA and implementing regulations (40 CFR §§ 1500-1508) require that federal agencies consider the impacts of their actions on the environment. Actions that are not listed as categorically excluded or considered an administrative action not subject to NEPA must be reviewed, and an Environmental Assessment or an Environmental Impact Statement, must be prepared to document the analysis. Approval of the COP by BOEM and issuance of an Individual Permit by USACE are both considered federal actions for the Project that will trigger review under NEPA. It is expected that BOEM will act as the Lead Federal Agency for the NEPA review of the Project.

Table 1.3-1. Summary of Permits and Approvals

Details on the status for required permits and approvals

| Permit / Approval and Statute/Regulation | Regulatory Authority | Date of Approval or Date of Anticipated Approval |
|---|--|--|
| FEDERAL | | |
| Approval of SAP, pursuant to BOEM Regulations (30 CFR 585.606, 610, 611) | BOEM | Approved, 10/12/2017 |
| Approval of COP, pursuant to BOEM regulations (30 CFR 585.626) | BOEM | Q2/Q3 2020 |
| Issuance of Individual Permit, pursuant to Section 10, Rivers and Harbors Act (33 U.S.C. 333, 403) and Section 404, CWA (33 U.S.C. 1344) | USACE, New England District | Q2/Q3 2020 |
| Issuance of OCS Air Permit, pursuant to Clean Air Act (40 CFR 55, 60; 42 U.S.C. 7627) | EPA Region 1 | Q2/Q3 2020 |
| Approval of IHA, pursuant to the Marine Mammals Protection Act (50 CFR 216, 16 U.S.C. 1361 et seq) | NMFS | Q2/Q3 2020 |
| Approval for Private Aids to Navigation, pursuant to USCG regulations (33 CFR 64.11) | USCG | 3–6 months prior to construction start |
| STATE | | |
| New York | | |
| Certificate of Environmental Compatibility and Public Need (CECPN), pursuant to Article VII of the New York Public Service Law (16 New York Codes, Rules and Regulations [NYCRR] Parts 85 through 88), Article 15 (6 NYCRR Part 608 and 621), and Article 25 (6 NYCRR Part 661) | NYSPSC, New York State Department of Public Service (NYSDPS) | Q3 2020 |
| Environmental Management and Construction Plan, pursuant to Article VII (16 NYCRR Parts 85 through 88) | | |
| Section 68 Petition (permission to exercise the grants of municipal rights), pursuant to Article VII (Section 68(1)) | | |
| Water Quality Certification, pursuant to Section 401 of the CWA and Implementing Regulations (6 NYCRR Parts 701, 702, 704, 754 and Part 800 to 941) | | |

Table 1.3-1. Summary of Permits and Approvals

Details on the status for required permits and approvals

| Permit / Approval and Statute/Regulation | Regulatory Authority | Date of Approval or Date of Anticipated Approval |
|---|---|--|
| State Pollutant Discharge Elimination System (SPDES) General Permit GP-0-15-002 for Stormwater Discharges from Construction Activity, pursuant to 6 NYCRR Part 750-757 | New York State Department of Environmental Conservation (NYSDEC) | 6–9 months prior to construction start |
| Utility Work Permit - Form Perm 32, pursuant to New York State Highway Law (Article 3, design2) | NYSDOT - Region 10 | 3–6 months prior to construction start |
| Grant to use New York State Lands Under Water, pursuant to New York State Public Lands Law (Article 2, Section 3, Subsection 2) | New York State Office of General Services (NYSOGS), Bureau of Land Management | Q3 2020 |
| Concurrence with Coastal Zone Management Program (CZMP) Federal Consistency Certification, pursuant to Coastal Zone Management Act (CZMA) (16 U.S.C. 1451 et seq, 15 CFR Part 930, and 30 CFR 585.611(b), 627(b)) and State Article 42 of the Executive Law (19 NYCRR Part 600 and 6 NYCRR Part 617) | New York State Department of State (NYSDOS) - Division of Coastal Resources | Prior to COP approval |
| <i>Rhode Island</i> | | |
| Concurrence with CZMP Federal Consistency Determination, pursuant to CZMA (16 U.S.C. 1451 et seq, 15 CFR 930, and 30 CFR 585.611(b), 627(b)) and Rhode Island Coastal Resources Management Program (RI CRMP) (Section 400) | Rhode Island Coastal Resources Management Council (RI CRMC) | Prior to COP approval |
| <i>Massachusetts</i> | | |
| Concurrence with CZMP Federal Consistency Determination, pursuant to CZMA (16 U.S.C. 1451 et seq, 15 CFR 930, and 30 CFR 585.611(b), 627(b)), Massachusetts General Law (M.G.L.) (21A, Subpart 4A) and Massachusetts Coastal Zone Management Program Policies (310 Code of Massachusetts Regulations [CMR] 20.00 and 21.00) | Massachusetts Office of Coastal Zone Management (MACZM) | Prior to COP approval |

Notes:

- Q1 = first quarter (Jan, Feb, Mar)
- Q2 = second quarter (Apr, May, Jun)
- Q3 = third quarter (Jul, Aug, Sep)
- Q4 = fourth quarter (Oct, Nov, Dec)

1.3.3 New York State Permits, Approvals, and Consultations

The SFEC has a design capacity that exceeds 125 kilovolts (kV) and extends more than 1 mile (1.6 km, 0.87 nm); therefore, it is considered an electric transmission facility (16 New York Codes, Rules and Regulations [NYCRR] Subpart 85-2.1). As such, the portion of the SFEC in New York State territorial waters (3 miles [4.8 km, 2.6 nm] offshore) to its onshore interconnection point with the LIPA transmission system (SFEC - NYS and SFEC - Onshore) is subject to review and approval by the NYSPSC under Article VII of the New York Public Service Law (16 NYCRR Parts 85 through 88), which authorizes the Siting of Major Utility Transmission Facilities.

The Article VII process provides a full review of the need for and environmental impact of the siting, design, construction, and operation of the SFEC and results in the issuance of a Certificate of Environmental Compatibility and Public Need (CECPN). The CECPN will include Water Quality Certification, pursuant to Section 401 of the CWA and Implementing Regulations (6 NYCRR Parts 701, 702, 704, 754 and Part 800 to 941), and relevant authorizations under Article 15 (6 NYCRR Part 608 and 621), and/or Article 25 (6 NYCRR Part 661).

Prior to construction, the NYSPSC must also approve an Environmental Management and Construction Plan that describes the practices during construction that will demonstrate compliance with the CECPN. In addition, prior to the start of construction, DWSF will apply for coverage under the State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity from New York State Department of Environmental Conservation (NYSDEC), a Utility Work Permit from New York State Department of Transportation (NYSDOT), and a Grant to Use New York State Lands Under Water from New York State Office of General Services (NYSOGS), Bureau of Land Management.

Consultation and review will also occur with NYSDEC for state-listed threatened and endangered species and unique or significant habitats; New York State Office of Parks, Recreation and Historic Preservation (NYSOPRHP) for cultural and historic resources; and New York State Department of Agriculture and Markets (NYSDAM) for agricultural lands.

1.3.4 Coastal Zone Management Act Consistency

The CZMA requires that federal actions impacting any coastal use or resource (defined as land or water use, or natural resource of a state's coastal zone), be conducted in a manner that is consistent with the enforceable policies of a state's federally approved CZMP or CRMP. Within this authority of the CZMA, state coastal programs that have been approved by National Oceanic and Atmospheric Administration (NOAA) may review federal actions impacting their coastal uses or resources or both, to verify that such activities are consistent with the state's enforceable program policies.

The federal actions associated with the Project include approval of the COP by BOEM and issuance of an Individual Permit by USACE, under Section 10 of the Rivers and Harbors Act and Section 404 of the Clean Water Act. The specific components and activities associated with those federal actions include construction, O&M, and decommissioning of the SFWF, SFEC - OCS, and SFEC - NYS. The construction, operations and maintenance, and decommissioning of the SFEC - NYS and SFEC - Onshore will also be reviewed and authorized under Article VII of the PSL by the NYSPSC. Their review will include review for consistency with the New York State CZMP.

DWSF has prepared consistency statements for review by each of New York, Rhode Island, and Massachusetts to confirm consistency with each state’s enforceable policies impacting any coastal use or resource, see Appendix A. In accordance with the “consistency” requirement of the CZMA (16 U.S.C. § 1456), as well as 307(c)(3)(A) and 15 CFR Part 930, Appendix A presents a tabular summary of applicable enforceable policies under the CZMP or CRMP for these states and an evaluation of how the SFWF and/or SFEC will be consistent with each policy, as well as cross references to specific sections of the COP where the policy is addressed.

1.4 Agency and Stakeholder Outreach

Since 2010, DWSF has been engaged in extensive outreach relating to the Project with federal and state agencies, federally-recognized Native American tribes (tribes), municipal organizations in East Hampton, New York, stakeholders representing a broad range of perspectives, and the public.

DWSF is committed to stakeholder communications and public outreach during Project development. A wide and varied range of communication methods will allow stakeholders and the public to be informed respecting the Project, such that appropriate outreach is occurring to meet the information needs of a diverse audience of stakeholders. The public involvement program for the Project includes:

- Regular briefings with federal and state agencies, tribes, elected officials, and other stakeholders to provide Project updates, solicit input and concerns, and respond to inquiries.
- Communications and regular briefings with the commercial and recreational fishing industry, including individual discussions and open house meetings in ports to provide Project updates, identify key concerns, and share relevant survey findings. Appendix B includes the Fisheries Communication Plan for the Project, including a summary of fisheries outreach to date. This outreach has been led by:
 - Rodney Avila, DWSF Fisheries Liaison, who has knowledge and understanding of the regional fishing industry, leads outreach with the commercial and recreational fishing industries. Mr. Avila is supported by Ms. Julia Prince, Long Island Fisheries Liaison who is a resident of Montauk in the Town of East Hampton, NY. Both Mr. Avila and Ms. Prince have made it a priority to engage with fishermen in home ports whenever possible.
 - Fisheries Industry Representatives from the ports of Montauk, Point Judith and New Bedford.
- Regular outreach and briefings to civic, community, and business groups to encourage them to join advisory working groups, attend public information meetings, and sign-up for email updates and newsletters.
- A community outreach office in Amagansett, New York with regular offices hours that provides a central location where Project information is available to the public and where small group meetings can be held.
- Informational meetings that will be conducted on a regular basis to keep the public informed and provide opportunities for input on topics related to the Project.

Table 1.4-1 identifies the federal and state agencies, federally-recognized Native American tribes, and municipal entities with which DWSF has met to discuss the Project through May 2019.

| May 2019 | New York State Parks, Recreation, and Historic Preservation (NYSOPRHP) | Project Update Meeting |

In addition to these meetings, DWSF has met with the following organizations and will continue to conduct outreach throughout Project development. These organizations include:

- American Association of Retired Persons
- Amagansett Citizens Advisory Committee

- Audubon Society of Rhode Island
- Brown Learning Collaborative
- Citizens Campaign for the Environment
- College of Staten Island, City University of New York
- Concerned Citizens of Montauk
- Conservation Law Foundation
- Cornell Cooperative Extension
- East Hampton Historical Society
- East Hampton Rotary Club
- Eastern Fisheries
- ECO Rhode Island
- Environment Business Council of New England
- Environment Massachusetts
- Environmental League of Massachusetts
- Fisherman’s Advisory Board and Habitat Advisory Board
- Group for the East End
- Inlet Seafood Corp
- Long Island Commercial Fishing Association
- Long Island Pine Barrens Society
- Massachusetts Audubon Society
- Massachusetts Clean Energy Center
- Massachusetts Fishermen’s Partnership and Support Services
- Massachusetts Fishery Working Group
- Massachusetts Habitat Working Group
- Massachusetts Lobstermen’s Association
- Mid Atlantic Fisheries Management Council
- Montauk Captain’s Association
- Montauk Chamber of Commerce
- Montauk Citizens Advisory Committee
- National Oceanic and Atmospheric Administration
- National Wildlife Federation
- Natural Resources Defense Council
- New Bedford Economic Development Council

South Fork Wind Farm

- New Bedford Port Authority
- New England Aquarium
- New England Energy and Commerce Association
- New England Fisheries Management Council – Habitat Working Group
- New England Fisheries Science Center
- New York State Fisheries Technical Working Group
- North Fork Environmental Council
- *Providence Business News* (PBN)
- Peconic Chapter of the American Institute of Architects (AIA)
- Port of New Bedford
- Propeller Club
- Responsible Offshore Development Alliance (RODA) / Responsible Offshore Science Alliance (ROSA)
- Rhode Island Building Owner’s Association School of Marine and Atmospheric Sciences at Stonybrook
- Sierra Club
- Surfrider Foundation, Eastern Long Island Chapter
- The Nature Conservancy (TNC)
- Town of East Hampton Energy Sustainability Committee
- Town of Southampton Sustainability Committee
- University of Rhode Island (URI) – Offshore Energy Department
- URI Labor Focus Group
- Wainscott Citizens Advisory Committee

DWSF has also conducted outreach activities with local stakeholders on Long Island and in ports in New York, Massachusetts, Rhode Island, and Connecticut. These activities include:

- American Planning Association Long Island Chapter-Fall East End Conference
- AIA, Peconic Chapter May Program Host
- Building Blocks Workshop: Parrish Art Museum
- East End Environmental Nongovernmental Organization (NGO) Meeting (North Fork Environmental Council, Group for East End, Long Island Pine Barrens Society, Concerned Citizens of Montauk)
- East Hampton Good Government Panel
- East Hampton Trustee Harbor Management Committee Meeting
- East Hampton Village Spring Fair

- Environmental NGO Roundtable at Guild Hall (Group for East End, Defend H2O, TNC, Surfrider Foundation, Concerned Citizens of Montauk, and others)
- Environmental NGO Science Presentations (Group for East End, TNC, Riverhead Marine Foundation, Perfect Earth Project, Surfrider Foundation, Concerned Citizens of Montauk)
- Fisheries Open House at Port in Montauk, NY
- Fisheries Open House at Port in Shinnecock Inlet, NY
- Fisheries Open House at Port in Jones Inlet, NY
- Fisheries Open House at Port in New Bedford, MA
- Fisheries Open House at Port in Point Judith, RI
- Fisheries Open House at Port in Stonington, CT
- Fisheries discussions with local stakeholders
- International Energy and Sustainability Conference 2017 at Farmingdale State College
- Long Island Association Meeting and Advanced Energy Research and Technology Center (AERTC) Boat Trip to Block Island Wind Farm (BIWF)
- Long Island Fisherman’s Expo
- Long Island Traditions – Working the Waters
- Massachusetts Coastal Zone Management Nantucket Energy Conference
- MTK Water Life Events: Sole East Resort
- Nantucket Energy Conference
- National Academy of Sciences, Offshore Renewable Energy Development and Fisheries Conference
- NY Bight Taskforce Meeting
- NY Workforce Development Institute Presentation
- Ocean Frontiers III Film Screening and Panel Discussion at Farmingdale State College
- Office Open House Event
- Offshore Wind Habitat Working Group Meeting
- Open House at Clinton Academy in East Hampton
- Presentation to League of Women Voters at Rogers Memorial Library in Southampton
- Rhode Island Public Meeting (TNC, URI, others)
- Sag Harbor Expressions Event: Renewable Energy Panel
- Southampton Village Earth Day Panel & Fair
- The 2nd Annual South Fork 100 percent Renewable Energy Forum
- Tours to BIWF
- Town of Southampton Earth Day Event at Good Ground Park

- Trustee Harbor Management Committee Meeting
- United States Coast Guard Offshore Wind Training
- URI Energy Lecture Series
- URI Offshore Wind Science Forum
- West Long Beach, NJ Fisheries Meeting Host

1.5 Tentative Schedule

As summarized in Table 1.5-1, installation of the SFWF and SFEC is scheduled to occur in 2021 and 2022 with the Project commissioned and operational by the end of 2022. The Project schedule assumes that permits will be obtained in 2020 in order to allow for several months of final engineering and design, contract negotiations, procurement, and manufacturing prior to the start of installation.

The installation schedule is based on several factors, including the timeframe when permits are received; regulatory time of year restrictions; environmental conditions; planning, construction, and installation logistics.

Table 1.5-1. Tentative Schedule

Installation schedule for the SFWF and SFEC

| Project Component | Milestone | Expected Duration | Expected Timeframe |
|-------------------|---|-------------------|--------------------|
| SFWF | Contracting, Mobilization, Fabrication, Transportation, and Verification | 36 to 48 months | 2019 to 2022 |
| | Foundation installation ^a | 4 months | 2021 to 2022 |
| | Inter-array Cable installation | 4 months | 2022 |
| | WTG installation | 2 months | 2022 |
| | OSS installation | 1 month | 2021 to 2022 |
| | Commissioning | 3 months | 2022 |
| | Construction and installation of SFWF O&M facility | 9 to 12 months | 2021 to 2022 |
| SFEC | Contracting, Mobilization, Fabrication, Transportation, and Verification | 36 to 48 months | 2019 to 2022 |
| | Interconnection facility construction | 6 to 9 months | 2021 to 2022 |
| | Sea-to-Shore installation (including horizontal directional drilling [HDD]) | 6 to 9 months | 2021 to 2022 |
| | Offshore cable installation | 2 months | 2022 |
| | Onshore cable installation | 9 to 12 months | 2021 to 2022 |
| | Commissioning | 6 months | 2021 to 2022 |

^a Pile driving activities will occur at the SFWF between May 1 and December 31, thereby mitigating impacts to North Atlantic right whale migration.

1.6 Other Project Information

The following sections provide other relevant Project-specific information to meet the requirements of the OCS Lands Act, NEPA, and other applicable laws and regulations, as recommended in the COP information requirements guidance document (BOEM, 2016).

1.6.1 Authorized Representative and Operator

DWSF will be the operator of the SFWF and the SFEC. The contact information for the Authorized Representative for the SFWF and SFEC is included in Table 1.6-1.

Table 1.6-1. Authorized Representative and Operator

Contact information for DWSF Representative and Operator

| Required Detail | Contact Information |
|-----------------------------------|--|
| Name of Authorized Representative | Peter Allen |
| Title | Director |
| Phone Number | 617-373-0208 |
| Email | PEALL@orsted.com |
| Address | One International Place, Suite 2610, Boston, MA 02110 |

DWSF is a wholly-owned indirect subsidiary of North East Offshore, LLC, a joint venture between Ørsted, the global leader in offshore wind, and Eversource, New England’s largest energy delivery company. North East Offshore, LLC and its subsidiaries are actively planning offshore wind projects to serve Rhode Island, Connecticut, and New York.

Ørsted is the global industry leader in offshore wind and has significant experience with the rigors and challenges of the offshore wind business. Over the past 25 years, Ørsted has constructed 5.6 gigawatts (GW) of offshore wind capacity (just under 30 percent of globally installed offshore wind capacity), with an additional 3.4 GW currently under construction. Ørsted’s existing activities span a number of markets, including the United States, Denmark, the United Kingdom, Germany, the Netherlands, and Taiwan. It is the current Ørsted leadership team that—within the short span of the past three to four years—has driven dramatic cost reductions and paved the way for exponential market growth. In 2018, Ørsted acquired Deepwater Wind, the company that built the United States’ first offshore wind farm, off Block Island, Rhode Island. Ørsted’s legacy Deepwater Wind team gained invaluable experience working with regulators, stakeholders, vendors, and U.S. construction contractors through the development and execution of the Block Island Wind Farm project. Together, Ørsted’s expanded team is leading a stakeholder-centric approach to development that has made it the go-to partner for States up and down the eastern seaboard as they seek to develop offshore wind resources. In addition to successfully constructing and now operating the first offshore wind farm, and to being awarded the contract for the South Fork Wind Farm, Ørsted—through the North East Offshore, LLC joint venture—has also been awarded contracts for the aforementioned Connecticut/Rhode Island offshore wind projects (Revolution Wind). Outside of the North East Offshore, LLC joint venture, Ørsted is also developing offshore wind projects to serve Maryland (Skipjack Wind) and Virginia (Coastal Virginia Offshore Wind) and has submitted a proposal for a project to serve New Jersey. Currently, Ørsted has in its U.S. portfolio commitments for nearly

1,000 MW of offshore wind serving five states. In connection with the Block Island Wind Farm project, Ørsted also fully developed the Block Island Transmission System, which includes a thirty-mile onshore and offshore transmission system that connected Block Island to the mainland of Rhode Island for the first time. This was the first offshore renewable-energy transmission system developed in the United States.

Eversource is an industry leader in constructing and maintaining large transmission and distribution projects, including high-voltage and extra high-voltage overhead, underground, submarine, and hybrid transmission lines, and associated terminal equipment. Throughout New England and New York, Eversource has successfully completed hundreds of capital projects over the past decade, with a proven track record in: successful single state and multi-state project siting and permitting; working closely with other companies to develop major projects; and safely and efficiently constructing transmission and distribution projects. It has successfully completed hundreds of traditional and major capital projects over the past decade, employing innovative solutions to technical and environmental challenges such as: the first and most extensive 345-kV applications of solid core crosslinked polyethylene (XLPE) underground cables in the United States; laying marine cable in Long Island Sound from a purpose-built ship; and constructing overhead transmission support structures from the air, using helicopters. Eversource is only one of four North American energy companies certified as an Environmental, Social and Governance leader, and is recognized as a leader in providing top-tier reliability with the utmost focus on safety.

1.6.2 Financial Assurance

DWSF will provide financial assurance in accordance with 30 CFR § 585.516, prior to BOEM approval of this COP.

Ørsted and Eversource are stable and diversified publicly traded energy companies, with a combined market capitalization of approximately \$49 billion, and combined operating cash flows of approximately \$3 billion annually. Ørsted is the global leader in financing, constructing and operating offshore wind, and—as a result of the recent acquisition of Deepwater Wind—its team now includes the individuals responsible for the first ever financing of an offshore wind farm in the United States, and the first tax-equity financing of an offshore wind farm anywhere in the world.

1.6.3 Certified Verification Agent Nominations

Pursuant to 30 CFR § 585.705, a CVA must be used to certify to BOEM that the proposed facility is designed to withstand the environmental and functional load conditions for the intended life of the Project at its proposed location. The CVA will also review the relevant design standards and environmental loading for the structural design of the facilities.

Nomination Statement

In accordance with 30 CFR § 585.706, DWSF nominates DNV-GL to serve as the CVA.

Qualification Statement

The Statement of Qualifications for CVA Services is provided in Appendix C. The Statement addresses:

- Previous experience of the nominated CVA in third-party verification and BOEM procedures
- Technical capabilities of the CVA and staff members

- Size and type of organization
- Availability of technology
- Ability to perform
- Conflict of interest
- Professional Engineer supervision

Scope of Work and Verification Plan

The CVA Scope of Work and Verification Plan are also provided in Appendix C. This document specifies the level of work to be performed by the CVA at all phases of the Project and identifies the list of documents and subject matter that the CVA will review.

1.6.4 Oil Spill Response Plan

Pursuant to 30 CFR § 585.627(c), an Oil Spill Response Plan must be submitted to the BSEE. In accordance with 30 CFR Part 254, DWSF has developed an Oil Spill Response Plan which is provided in Appendix D.

1.6.5 Safety Management System

Pursuant to 30 CFR § 585.627(d), a Safety Management System must be submitted to BOEM. In accordance, with 30 CFR § 55.810, DWSF has developed a Safety Management System which is provided in Appendix E.
