

HYPRgERM **MAX**

CREATES THE BOOST NEEDED
FOR SEED GERMINATION, AS
WELL AS ROOT STRENGTH AND
SIZE AS THE PLANT MATURES

RETAINS NUTRIENTS THAT HELP
INCREASE SEED GERMINATION
RATES, GERMINATE QUICKER AND
EMERGE MORE CONSISTENTLY

Ingredients:

FULVIC ACID

SEAWEED

SEA CROP

INGRAINED

SURGE

HYPRgERM Seed Treatment

HYPRgERM is a Seed Treatment designed to increase germination rate and consistency. HYPRgERM promotes more root growth, plant vigor and stress tolerance. This all leads to more photosynthesis, larger stalks' allow for increased nutrient flow, and larger root mass allows for a more robust rhizosphere to secrete root exudates and uptake water, minerals and nutrients; all of which equals more yield potential and more carbon cycling.

HYPRgERM is easily applied through either a commercial seed treater, a concrete mixer, or during transfer of seed from Pro Box to Air Seeder/Planter. HYPRgERM can be mixed with other seed treatments.

HYPRgERM provides an immediate ROI via the combination of increased yield, increased test weight, increased protein (1-2 %), increased biomass, increased carbon sequestration in addition to potential reduction in N fertilizer. We have seen up to \$60+/acre ROI. Give us a call and we will be happy to discuss how HYPRgERM might benefit your operation!

HYPRgERM Application and Mixing Instructions

Apply 6-8 oz of HYPRgERM per 100lbs of seed. Apply HYPRgERM through a commercial seed treater, cement mixer, or during transfer of seed from Pro Box to Air Seeder/Planter.

HYPRgERM can be mixed with other seed treatments and products such as herbicides and fertilizers. If you mix HYPRgERM with other products, mix the synthetic products first and add HYPRgERM last. But, do NOT mix HYPRgERM with fungicide.

WARNING!!!

Jar test for compatibility before mixing with other inputs
