OUR COMPANY

“HOLD THE STANDARD”

Westhill Services provides labour hire, field service and heavy fabrication support for the mining industry.

Based in Mackay and working across the Bowen Basin, Westhill supports clients through breakdowns, shutdowns, maintenance support and refurbishment work on large earthmoving equipment. The business combines experienced people, practical thinking and workshop capability to help keep equipment operational and work moving.

Westhill is built on more than broad capability. It is built on strong standards, dependable delivery and the kind of judgement that matters when timelines are tight and the pressure is on. From top-up labour and long-term shift support through to fabrication and offsite refurbishment, the focus remains the same: capable people, solid work and support that reduces pressure instead of adding to it.

At Westhill, quality workmanship and timely delivery are not separate priorities. They are part of the same standard. That standard is what clients rely on, what the team stands behind and what continues to set Westhill apart.

WHY WESTHILL

Westhill is not just another labour and fabrication provider. It is a business built to support the kind of work where pressure is high, downtime matters and the standard cannot slip.

What sets Westhill apart is the combination of capable people, practical thinking and workshop-backed support across labour hire, field service and heavy fabrication. Instead of operating in one lane, the business can support clients across multiple operational needs with one accountable team behind the work.

Westhill is known for stepping into demanding environments with the right people, the right attitude and the judgement to keep work moving. That means less friction, less chasing and support that is grounded in experience.

At Westhill, the difference is not just in what the business can do. It is in the way the work is approached — with ownership, strong standards and a clear focus on doing the job properly from start to finish.

Why clients choose Westhill

- Capability across labour hire, field service and heavy fabrication
- Practical support for breakdowns, shutdowns, maintenance and refurbishment work
- Experienced tradespeople who contribute properly from day one
- Workshop and field capability that helps keep equipment operational
- Strong standards around workmanship, accountability and safety
- Support that reduces pressure instead of adding to it

CORE VALUES

TAKE OWNERSHIP

We take responsibility for the work, the outcome and the standard we leave behind.

BACK CAPABILITY

We back competent people who know their trade, take pride in their work and can be trusted to perform when it counts.

THINK PRACTICALLY

We solve problems with experience, common sense and a clear understanding of what the job demands.

HOLD THE STANDARD

We do not let safety, workmanship or accountability slip when the pressure comes on.

WORK TOGETHER

We build strong teams through fairness, trust, clear expectations and respect for the people behind the work.

FIELD SERVICE SUPPORT AND LABOUR HIRE

Westhill Services provides field service support and labour hire for mining and heavy equipment operations that need capable people, practical support and less friction on the ground.

Our team of Diesel Fitters, Auto Electricians, Boilermakers and Mechanical Tradespeople is available for short and long-term engagements across breakdowns, shutdowns, scheduled maintenance and project work. The value is not just in availability. It is in having experienced tradespeople who can step in, get on with the job and contribute properly from day one.

At Westhill, good labour support is about more than filling a gap. It is about sending the right people, reducing pressure on the client and helping keep operations moving without creating more work than they solve.

From ad-hoc support and top-up labour through to longer-term coverage and shutdown support, Westhill delivers field service and labour hire solutions backed by experience, practical thinking and a standard that means something.

HEAVY FABRICATION DIVISION - WORKSHOP & FIELD SERVICE BOILERMAKERS

Westhill Services' Heavy Fabrication Division supports mining, construction and industrial clients with workshop and field service boilermaker capability built around quality workmanship, practical problem-solving and dependable turnaround.

Our services include bucket and tray repairs, full rebuilds, crack repairs, wear package installations, mobile and fixed plant fabrication, structural repairs, shutdown support and onsite boilermaker services. We also provide gouging, cutting and welding services using FCAW, GMAW and MMAW processes to OEM and site specifications.

Westhill's capability extends beyond standard repair work to include specialised heavy fabrication such as chassis, handrails, platforms, guards and high-strength structural components. With a fully equipped workshop and a highly mobile field service team, we are able to support clients with fabrication solutions that are efficient, practical and built to keep equipment moving.

At Westhill, the difference is not just in what we can fabricate. It is in the standard behind the work, the judgement behind the repair and the ability to deliver under pressure without compromising quality.

PROJECT HIGHLIGHT

CAT 793 TRAY REPAIR

Large-scale in-house tray repair

This CAT 793 tray entered the Westhill workshop with widespread cracking and mechanical damage across multiple areas of the asset. Initial inspection identified a substantial repair scope, with 34,530 mm of indications recorded across the tray.

Damage and wear were identified across key sections including the side walls, front wall, canopy and floor, with a large concentration of the recorded indications located on the floor underside. This confirmed the scale of the repair required and the importance of a controlled, in-house approach.

Using Westhill's workshop capability, the tray was assessed, repaired and restored in-house from start to finish. The project reflects Westhill's ability to take on large-scale heavy repair work with practical problem-solving, strong workmanship and dependable workshop support.

This kind of work demonstrates more than fabrication capability alone. It shows Westhill's ability to inspect thoroughly, identify the true repair scope, apply the right repair process and return major equipment components to service in improved condition.

OUR COMMITMENT

WESTHILL SERVICES RECOGNISES AND RESPECTS THE MANY DIVERSE AND TRADITIONAL OWNERS THROUGHOUT OUR AREA OF WORKS IN THE BOWEN BASIN REGION.

Westhill Services is committed to building a strong, sustainable business that delivers quality maintenance, fabrication and field service solutions while operating with respect for people, community and the environment.

We invest in skilled people through apprenticeship and upskilling opportunities, while maintaining a workplace culture built on safety, accountability and respect.

Through practical innovation, responsible business practices and high operational standards, Westhill aims to deliver dependable outcomes, create long-term value and continue building a reputation as a trusted and capable service provider.
