RECORDING EQUIPMENT & ACCESSORIES FOR

- Distribution –Sub-transmission –Transmission –Power Plants**
- Wind Power –Solar Power –Industrial Plants**

EXCEEDING NERC PRC-002-02

www.appengineering.com

Mission Statement

APP Engineering's mission is to become a leading provider of multifunction recording instrumentation and analysis software. In this quest, we pledge to provide high quality state of the art equipment and software, superior customer service, and competitive prices.

Our Profile

APP Engineering is an OEM (Original Equipment Manufacture) that specializes in the design, manufacturing, programming, and testing of multifunction recording instruments. Our equipment is primarily used by electric utility companies and large industrial plants to record power line interruptions, faults, disturbances, and power quality. APP Engineering is a customer oriented business with open access to top level management and product design engineers. The Directors of the company bring more than 65 years of combined experience as original equipment manufactures.

Our Quality Policy

APP Engineering, Inc. is committed to meeting customer specifications, customer satisfaction, quality of products, and on time shipments. We will achieve these by complying with the quality management system requirements of ISO9001:2015 and continually improving its effectiveness.

APP Engineering, Inc. is an ISO 9001:2015 - ANSI/ISO/ASQ Q9001-2015 & ISO 27001 Certified Company.

RUGGED COMPUTER CONTROL CHASSIS

DATA CHASSIS - ANALOG & EVENTS

MONITOR & KEYBOARD CONSOLE
OPTIONAL

MORE VERSATILITY WITH THE APP-601 Recorder

- IP Addressable
- Distributed Or Centralized Architecture
- Expandable To Hundreds of Analog and Event Channels
- Reduced Chassis Depth (9.8")
- No Fans, Option for No Moving Parts
- Increased Operating Temperature Range
- Interoperability with APP-501 Recorder
- Tremendous Configuration and Integration Flexibility
- Multiple Data Chassis, One Easy To Retrieve Record
- Exceeds NERC PRC-002-02 & Regional Requirements
- Lightning and Distance to Fault Correlation
- Redundant Computer Control Option
- Traveling Wave Fault Location Option
- 61850 Goose Capture
- 61850 SV Subscribe

Centralized or Distributed Installation

Applications

- Transmission
- Generation
- Distribution
- Research
- Case studies
- Power Quality Monitoring

Features

Hardware:

- Main hardware
 - Computer Control Chassis (one/system)
 - Data Chassis (usually multiple/system)
 - Monitor & Keyboard Chassis (option)
- Distributed or Centralized architecture
- Place multiple data chassis in a single panel, disperse them among several panels, or different buildings while maintaining a single all encompassing easy to retrieve COMTRADE record.
- Independent data chassis operation, if one chassis stops the others continue to operate
- Ethernet based
- Easy expandability
- All chassis IP configurable
- Fiber optic interface option
- Fanless
- No moving parts (option)
- High operating temperature (option)
- Short data chassis depth (9.8”) for easy physical wiring, rack mountable
- Data aligned to 1PPS within 1usec
- Modulated or un-modulated IRIG-B
- Internal or external 1PPS
- Each analog channel can be configured for voltage or current input
- Wide voltage and current input range
- AC & DC Measuring
- Hot swappable cards
- Internally or externally wetted event cards
- Wide event card voltage range
- Pluggable event and alarm card connectors
- 8 output relays
- Easy plug and unplug power supply board
- Easy access power supply modules
- Easy access embedded computer board
- Excellent EFT and oscillatory immunity
- Simultaneous recording functions
- Traveling Wave Fault Location, Option

Features

Software:

- Windows OS: Win 10 Pro
- Option: Linux OS or Win Server
- Main Software Programs
 - APP Recorder
 - APP ClearView (master station software)
- APP Recorder runs as a service
- APP ClearView is the master station analysis software and can be run locally at the recorder and run remotely on the master station computer
- Communication and file transfer is between APP ClearView and APP Recorder
- Secure protocol between Recorder and Clear-view, password protections, and IP address permission settings
- Network, modem, DNP-3 communications
- Update APP ClearView from APP website
- Update recorder software via APP Clear-View (master station software)
- Simple and intuitive recorder and master station configuration
- Setup the recorder configuration locally or from the master station and download
- View real-time metering, oscillographs, and event status at the recorder or via RDP from the master
- Toggle the recorder power from ClearView
- Mappable Alarm Outputs
- COMTRADE records directly from recorder
- Many automatic task such as; Com Names file naming, PQDIFF format, diagnostics, calling, polling, emailing, pushing records via FTP, record backups, software updates, alarm reporting, trace file generation, and printing
- Many manual functions such as; calling, test run, reboot, reinitialize, and defrag
- File transfer feature allows master station user to delete, cut, copy, or paste any file at the recorder and allows any file transfer between master station and recorder.
- Event channels configurable as DFR, SER, or both.
- Multiple triggers per analog channel
- Cross Triggering Ethernet or Hardware
- Easy PMU Setup, Stream Multiple Line Groups
- IEC 61850 Goose Capture Digital into SER
- IEC 61850 SV Subscribe
- PQDIFF, DNP3, MODBUS
- Auto Instant Cellular Message, sends fault data via Telegram Messenger

Transient Oscillography Recording

Transient recording rates at 60 Hz are 2400, 4800, 9600, 11520, 15360, 16800, 19200, 24000, and 30720 Hz (at 50 Hz up to 25600 Hz). Voltages, currents, and events are recorded before, during, and after the fault. Each data sample is time stamped for convenient protection analysis, circuit breaker operation, clearance times, and waveform overlaying. Hundreds of Analog and Event channels can be simultaneously recorded and contained in a single record.

Transient records can be started by the following analog channel triggers:

- Voltage (over, under, both)
- Over current
- Frequency (over, under, both, step)
- Positive, Negative, and Zero Sequence
- THD
- Harmonics
- Active Power (over, under, both)
- Reactive Power (over, under, both)
- Impulse
- Magnitude
- Unbalance
- Rate of change for all
- Duration setting for all
- PQ: Voltage Sag, Swell, Dip, Surge
- Flicker
- Automatic post fault retriggering

Extended Oscillography Recording

An extended oscillography record is generated each time the recorder trips and creates a transient record. The recording rates are 240, 360, 480, 720, 960, 1440, and 1920 Hz. The maximum record length is 40 minutes. Data is recorded before, during, and after the fault. This feature is useful for calculating a variety of power system quantities, re-close events, and stability status. APP ClearView zoom, drag & drop, and signal converting features allow for fine detail viewing and analysis.

Extended RMS Recording

An extended RMS record is generated each time the recorder trips and creates a transient record. Analog inputs are sampled at 1 sample per cycle or slower. This RMS file is smaller in size and can be retrieved faster than the extended oscillography. Data is recorded before, during, and after the fault.

Continuous RMS, Frequency, and RMS + Phase Recording

All three recordings are enabled with a single setting. Data is recorded up to 99 days in a circular buffer. The user can retrieve any time slice over the recorded period. All channels or specific channels can be retrieved. Subtle events that may not have tripped the recorder can be retrieved and analyzed. By retrieving Phase + RMS data information such as apparent power, active power, reactive power, power factor, and phase impedances can be derived for long periods of time.

Files are automatically packed in COMTRADE format and named using the IEEE Com Names convention. Many APP ClearView features are available for fine detail viewing and analysis. After retrieving records, the Y-Scale can be changed to view very small deviations in RMS, frequency, or phase values.

As shown, Y-Scale set to “optimize” for displaying small changes in amplitude

ZOOM FOR DETAIL

Continuous Oscillography Recording

Continuous oscillography recording rates are 240, 360, 480, 720, 960, 1440, and 1920Hz. Data is recorded in a circular buffer having a typical period of 14 days. The user can retrieve any time slice over the recorded period. All channels or certain channels can be retrieved. Subtle events that may not have tripped the recorder can be retrieved and analyzed. Power and impedance values can be derived. Files are automatically packed in COMTRADE format and named using the IEEE Com Names convention. Many APP ClearView features are available for fine detail viewing and analysis.

Continuous Trending RMS and Frequency

Trends for these 2 continuous recording functions can be recorded for up to 99 days. The user can retrieve any trend time slice for the recorded period. All channels or specific channels can be retrieved. Maximum, Average, and Minimum trend plots are available for the continuous RMS, and Frequency recordings. If a user retrieves trend data they will view 3 plots (Maximum, Average, and Minimum) per channel. As shown below, the Y-Scale in the analysis software can be adjusted to show small changes in amplitude. Daily trend files automatically converted to a COMTRADE record at the end of each day.

Continuous One Cycle Snap Shot

For your power quality personnel, the APP-601 Recorder can capture a one cycle snap shot every minute (adjustable) at the transient sampling rate. This steady state information can be retrieved and viewed with APP ClearView or any other 3rd party power quality software. The systems ability to automatically put this information in PQDIFF format is useful for viewing with commercially available power quality software. Data is recorded in a circular buffer for up to 99 days. All channels or specific channels can be retrieved.

Continuous: Flicker, Harmonics, Unbalance, PQ, MW, MVAR

For your power quality personnel, the APP-601 Recorder can capture Flicker, Harmonics, Unbalance, MW, MVAR and other data once every 10 minutes.

- Flicker (IEC 61000-4-15), P_{ST} Up To 1620 CPM, (13.5Hz)
- Harmonics (IEC 61000-4-7), Max up to 13th and THD, with Max/Avg/Min Plots
- Unbalance (IEC 61000-4-30), 0seq/+seq, with Max/Min/Avg Plots

Turn-key

Reduce installation time and cost by purchasing a turn-key system.

- Any cabinet or panel size
- Manufactured to your specifications
- Analog terminal blocks: straight strap, sliding link, or knife blade
- Event terminal blocks: straight strap, sliding link, or knife blade
- Test Switches
- Lights
- Convenience Receptacles
- Complete Wiring
- Complete software setup
- Comprehensive Testing
- Quick Turn
- Affordable
- Wall Mount Enclosures Available

Specifications (APP-601)

Analog Channels

Voltage:

Up to 30 analog channels per chassis
Up to 440VAC Max
AC or DC Input
Burden 0.045VA@67V, 0.144VA@120V
Accuracy 0.15% of reading + 0.005% of range (typical)

Current:

2mΩ Internal Shunt
Burden 0.05VA@5A, 0.45VA@15A
15A RMS Continuous
140A RMS for 2 sec, 250Arms for 1/2 sec
Accuracy 0.61% of reading + .005% of range (typical)

General:

16 Bit A/D
Data aligned with 1PPS rising edge
Ch to Ch phase angle error <0.004°
Cut-off frequency (-3db) 5KHz
Common Mode Rejection 80dB Min
Temperature Error 70ppm/°C
Channel to channel isolation 3500VDC
Channel to ground isolation 3500VDC

Event Channels

Up to 80 event channels per chassis
Standard input operating range 45-250VDC
(Option 24VDC available)
(Option Cards with Internal Wetting Voltage)
Channel to channel isolation 3500VDC
Channel to ground isolation 3500VDC

Power Supply

Voltage Range: 86 to 370 VDC and
88 to 264 VAC
Frequency Range: 47 to 63 Hz
Overload, Over Voltage,
Over Temperature Protection
Power @ 125VDC and 54 analog channels
and 96 event channels is approximately 140W
Input to ground isolation 3500VDC

Timing

Modulated or Un-modulated IRIG-B
Data aligned to 1PPS within 1usec
1PPS in/out chassis to chassis
Internal 1PPS backup
PTP Option

Communications

Recorder to Master Station Com:

TCP/IP Ethernet 10/100
Fiber (option, Multi or Single Mode)
Modem

Chassis to Chassis Com:

Ethernet 10/100
Fiber (option, Multi or Single Mode)
DNP3/Modbus Com: TCP/IP or RS232
Modbus Com: TCP/IP
PMU Com: Ethernet or RS232
(TCP,UDP,UDP-T,UDP-U)

Status Relays

8 alarm outputs, N.O. or N.C, SPST
Contact ratings: 10A Cont. & Break 0.5A @
125VDC, Break 0.35A @ 250VDC,
Dielectric 5KVac

Alarms (Mappable)

Power, Online, Offline, Clock Sync Loss,
Chassis to Chassis Comm., Master Comm.,
Disk Full, Temperature, Computer,
Transient Record, SOE Record, Disturbance
Record, Continuous Record, Analog Ch,
Comp Health (additional outputs available)

Enclosure

19" Rack x 5.25"H x 9.8D"
(Note, APP-501 Comp Chassis is 14.6" Deep)
Many cabinet/panel sizes available

Compliant Standards

ANSI/IEEE C37.90.1 (Surge Withstand)
IEC 61000-4-2, 4-3, 90.2 (RF Immun., Keying)

Software APP Recorder™

The APP Recorder™ Program provides another means for human interface, controls the functionality of the Recorder, and includes many features to make setup quick and easy. APP Recorder runs as a system service. It automatically starts when the recorder is powered up, and automatically restarts if a user exits the program. Permissions, passwords, administrative rights, and allowable IP addresses can be setup to limit access to important settings and sensitive information. Major duties of the APP Recorder program are listed below.

View		Configure	
Fault number	Event Status	Point assignments	Auto-Call-In
Recorder Settings	Analog Trigger Status	Line groups	Passwords
RMS Metering	SER Log	Printing	Emailing
Frequency Metering	Communication Status	Directories	FTP
Phase Metering	Distance to Fault	Auto Backups	PMU

The screenshot shows the APP Recorder software interface. At the top, it displays 'Company - XYZ Plant'. Below this, there are status indicators: 'DISK: 654.1G Free', 'Alarms: OFF', and 'Monitoring income call thru Network'. The main area is divided into several sections:

- Recorder ID 0001**: Includes fields for Next FID (12), #Analog (84), #Events (144), #Triggers (150), and DNP3 (ON).
- Transient ON**: Includes Frequency (4800 Hz), Prefault (160 ms), Postfault (500 ms), and Fault Limit (500 ms).
- Extended ON**: Includes Frequency (960 Hz), Prefault (10 s), Postfault (10 s), and Fault Limit (10 s).
- Cont. Oscillograph ON**: Includes Frequency (960 Hz) and Storage (14 days).
- Cont. Freq.RMS.Ph ON**: Includes #Cycles/Point (2) and Storage (30 days).

Below these settings is a table with columns: Analog Channel Description, RMS, Frequency, and Phase - Phase(A1). The table contains data for seven units (A1 through A7) with their respective RMS values, frequencies (60.008 Hz), and phase values.

All critical settings can be configured locally or remotely and downloaded

Easy single click software updates via APP ClearView

View real-time phase voltages and currents, analog triggers, event status, and perform any required calibration with the "Oscope Function"

This sidebar control panel includes the following sections:

- YScale**: Radio buttons for Full Scale (113.00V), Abs. Full Scale (191.35V), and Optimized.
- Meter**: Radio buttons for Primary and Secondary. Shows RMS: 122.0880V and Offset: 0.0055V.
- Show Analog Channels**: Chassis#: 1 Ok, Analog Channel #: 1 Ok, Sequence Of: 1, Show #Cycles: 04 Ok.
- Calibrate Offset**: Buttons for Calibrate and Un-Calibrate. Status: Offset Calibrated.
- External Calibration (Slope)**: At Secondary: 100 V, buttons for Calibrate and Un-Calibrate. Status: Slope Calibrated.
- Calibrate Phase (for Post-Proc)**: Ref: A1, 0.000 deg, buttons for Calibrate and Un-Calibrate. Status: Show checked.
- Buttons**: Running..., Stop, One Shot.

Software APP ClearView™

One of APP Engineering's premier strengths is our ability to provide time saving, valuable, and user-friendly software. Years of experience in software development, logical algorithm formulation, engineering, mathematics, and customer service, has given us the tools to provide world class software solutions. Our commitment to provide software that is truly valuable is enhanced by our ability to respond quickly to customer requested changes and upgrades.

The APP-601 Recorder™ includes our APP ClearView™ Program and our APP Recorder™ Program. The APP ClearView™ program is run on your master station computer and it is loaded on the recorder for "on the spot" record review and analysis. Use this software to not only view COMTRADE records from your APP Recorder but open any COMTRADE record for viewing and analysis. The APP ClearView™ Program will run on Windows 95, 98, NT, 2000, XP, Vista, 7, 10, or Server. Call or email us today for a demo version of APP ClearView.

APP ClearView™ -summary table

APP Traveling Wave Fault Location

Summary

The APP traveling wave technology is a scalable and configurable solution that can locate a fault with high accuracy. With an accuracy of 200 feet or better, this will significantly reduce the down-time of correcting the fault.

Add to any existing APP-601 system. Can create any configuration of analog, digital and traveling wave boards in each data chassis (over one million different configurations)

Both double end and single end configurations are possible

This is an accurate and reliable solution has the bottom line of reducing down time and ultimately saving costs.

Highlights

- High Level of Accuracy
- Double Ended or Single Ended Configurations
- Megahertz Sampling Frequency
- Highly Configurable
- Up to 10 Cards per Chassis
- Low Learning Curve
- Easy to Maintain
- Add to any existing APP-601 Recorder
- 10-Year Warranty on All Traveling Wave Hardware

Concept

Travelling wave fault location (TWFL) is a method to determine the location of a fault on an electrical line.

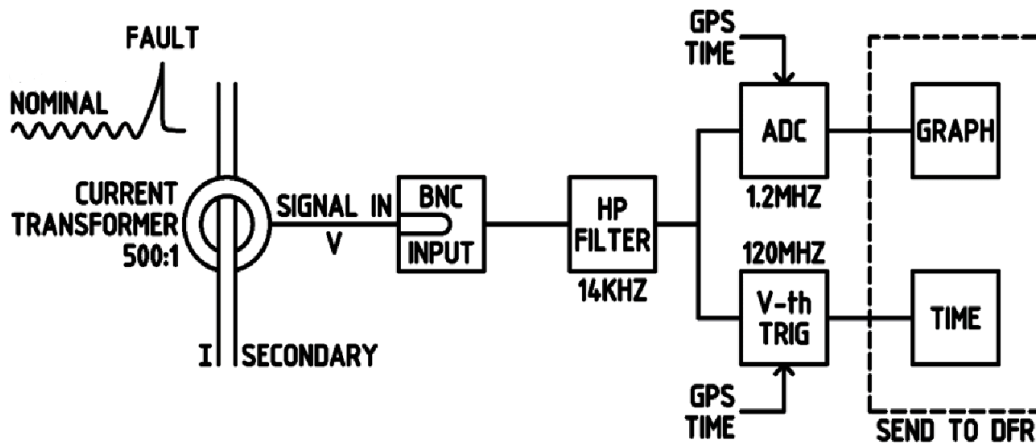

By using the information about the length of the line, the time of when the fault was recorded, and the velocity at which the fault moves along the line (information which is known at the time of setup), the Recorder's TWFL feature can determine the location of the fault along the line.

The Bewley diagram shows the relationship between the fault and the respective reflections being picked up by the DFR(s).

Block Diagram

- The signal is picked up by a high bandwidth, 500:1 CT that connects via BNC
- The signal runs through a high-pass filter which refines the presence of the fault
- The signal is split between a high frequency ADC and a voltage-threshold trigger
- The threshold trigger records the time-mark of the fault at the nanosecond precision and is recorded to the INF file

Easy Addition to Any APP Recorder

- 1) Install traveling wave board
- 2) Connect unmodulated IRIG-B signal
- 3) Connect to DFR ethernet switch
- 4) Install split core traveling wave CT
- 5) Connect traveling wave CT to traveling wave board
- 6) Add to DFR setup file

Hardware

- Traveling wave circuit board P/N: **PCBTW-1-POP-KIT**
Includes: Card, IRIG-B Jumper, BNC-T Ethernet Cable
- Traveling Wave Split Core CT P/N: **APP-00829-TW**
(with 15' twisted wire leads)

TW Circuit Board
P/N: PCBTW-1-POP

Configurations

- Add traveling wave cards & traveling wave CTs to existing APP DFR/DME data chassis that have open card slots
- Purchase an APP-601 data chassis with traveling wave cards and CTs and add to an existing APP DFR/DME
- Purchase new APP-601 DFR/DME with any combination of Analog, Event, and TW cards
- Purchase a standalone APP-601 DFR/DME in which all cards are traveling wave
- Double ended with communication or double ended no communication or single ended

TW Split Core CT
P/N: APP00829-TW

Note

One traveling wave CT per phase or we recommend one traveling wave CT clamped around phases A, B, C (1 board and 1 CT's per line).

Specifications

Accuracy	< ± 200 feet
Features	Sampling Frequency: 1.2MHz Trigger Frequency: 120MHz Programmable Trigger Threshold
Interface & Comm	Viewable Record in COMTRADE Ethernet to APP DFR Switch Each TW Card IP Programmable Fully Integrable with APP DFR (DME)
Alarms	8 Alarm Outputs
Configuration	One Channel per Board Up to 10 Boards per Data Chassis Up to 250 Boards per System
Environmental	Temperature: -25° to 70°C Humidity: 95% Non-Condensing
Warranty	10-year on all traveling wave hardware
CT	500:1 Ratio 100Hz to 1MHz Connector: via BNC

The most advanced, affordable, and user friendly recorders on the market

A ten year warranty applies to most items. Contact the factory for specific details. Items such as satellite controlled clocks and antennas carry the OEM warranty.

Specifications subject to change without notice.
