

VIGIL CLIENT

Adding Servers with Presets

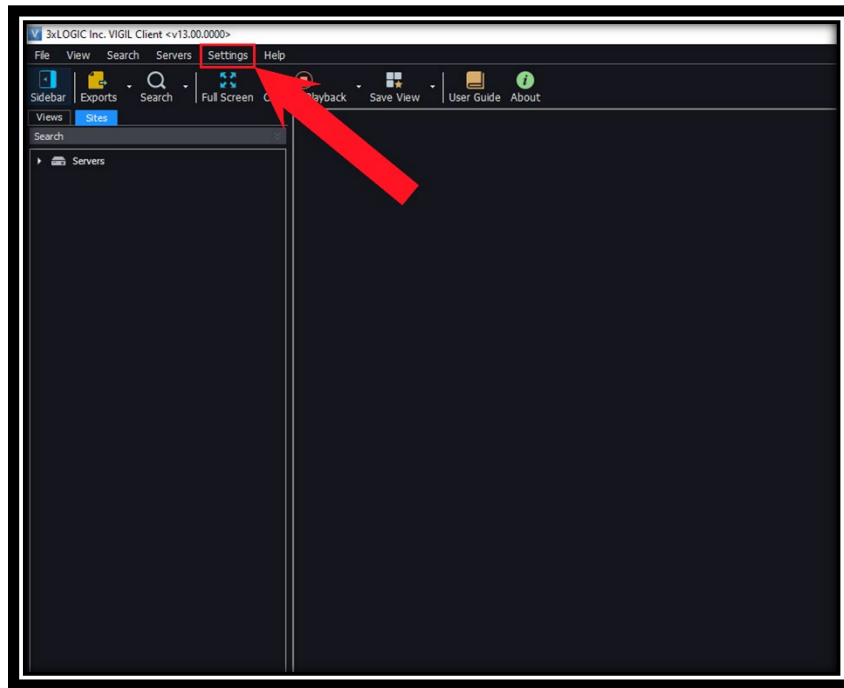

Version 1.0

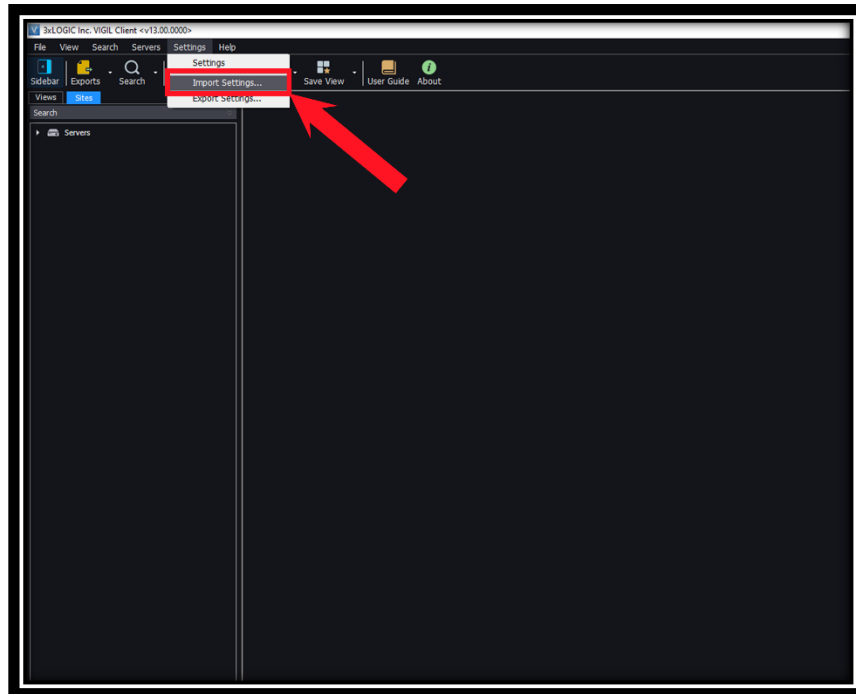

Date Created:

14 Oct 2025

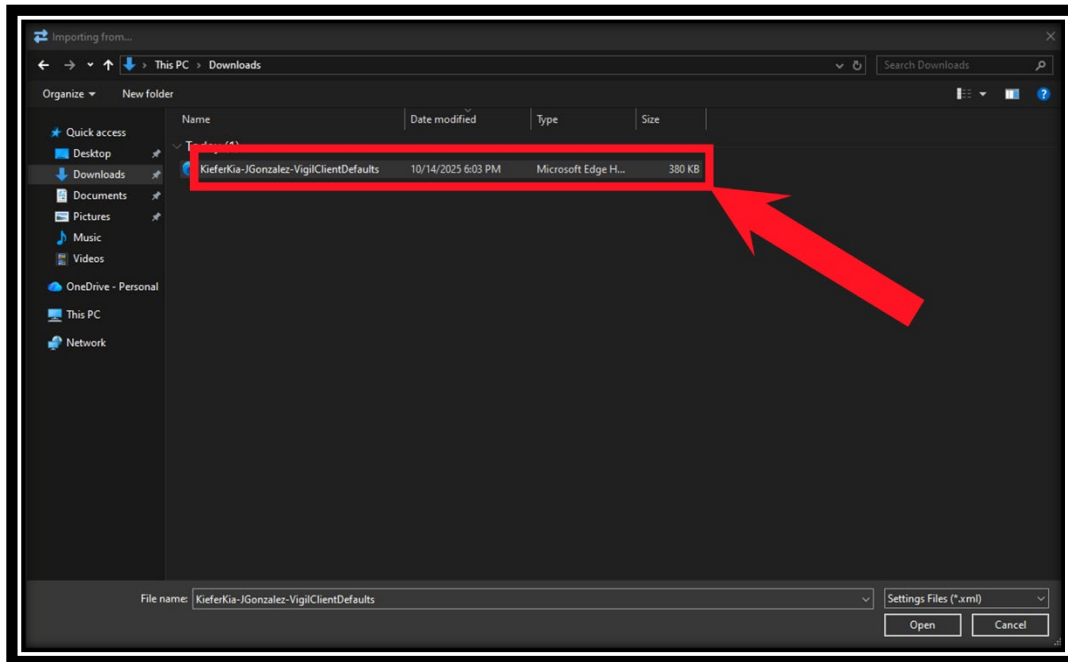

1. Once you have Vigil Client installed, open the program and navigate to “Settings” located on the top left of the program.

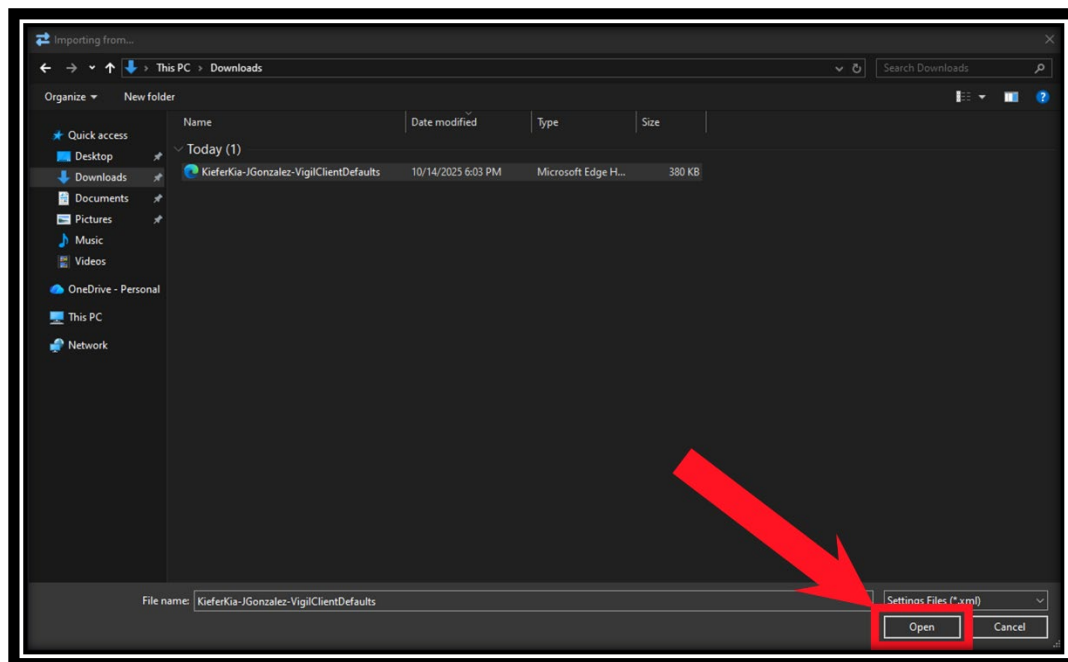

2. Then, click on “Import Settings” from the drop-down menu.

- Another window will then pop up, and this is where you will navigate to your downloads folder to select the settings preset file that you received from a DWZ Technologies representative. It should include the dealership's name, and the name of the user it is intended for.

- Once you have selected the correct settings preset, click "Open" in the bottom right.

5. After clicking “Open”, a loading bar will pop up temporarily before all the cameras are populated in Vigil Client. You should now have access to all the cameras and servers that have been added to your personal settings preset.
