INFORMATION FOR RESIDENTS - REF LA COUPÉE

Residents may be aware of a recent rockfall and partial wall collapse on the southern end of the western side of La Coupée.

Tomorrow (Thursday 16 January), a geologist from GeoMarine Jersey and two engineers from GeoMarine Guernsey are visiting the site to conduct a drone inspection and design a remedial solution.

Engineers and rope access specialists from GeoMarine Guernsey are being mobilised to carry out these remedial works next week (week commencing 20 January). This is likely to involve installing mesh reinforcement and spraying concrete.

We are grateful for the swift response from GeoMarine.

As a precaution, the road is closed to all but the most essential vehicle traffic with weights to be kept to an absolute minimum.

We will know more once the engineering team have visited tomorrow. We will update residents as soon as we can.
