

# The Drive to Decarbonize

Steps Towards Building a Low - Carbon, Green - Energy Economy

> 8 - 10 November 2022 Kuwait

#### The Idea in Brief

Climate change increases with greenhouse gas (GHG) emissions. The international community has resolved to achieve net zero emissions by 2050, meaning that some greenhouse gases will still be released into the atmosphere but an equal amount will be captured from the atmosphere and stored permanently in soil or materials.

Companies report GHG emissions from sources they own or control as Scope 1. They report emissions from the generation of purchased electricity that is consumed in their owned or controlled operations as Scope 2.

Having one of the world's highest per capita emissions, Kuwait has pledged to reduce greenhouse gas emissions by about 7% by 2035, a target that falls far short of the 45% reduction needed to meet the Paris Agreement's stretch goal of limiting global warming to 1.5C by 2030. Businesses operating in Kuwait must rise to the challenge of addressing this key sustainable development issue. Companies need to design and maintain a corporate GHG inventory, to account for and report their emissions. Future financial accounting standards may treat GHG emissions as liabilities and emission credits as assets.

### **Program Objectives**

This three-day program is for members of senior management, health safety and the environment (HSE), strategy development and planning, sustainability development, process engineering, maintenance, and risk management.

The program covers principles and practices critical to developing plans for lowering GHG emissions. At the conclusion of the program, delegates should be able to:

- Recognize forces driving emissions
- Identify steps for setting organizational and operational boundaries when creating a GHG inventory
- Recognize the three scopes of emissions based on the greenhouse gas protocol corporate accounting and reporting standard
- Recognize the four sources of Scope 1 emissions
- Calculate GHG emissions from fuel combustion using emission factors

## **Registration Information**

Date: November 8 - 10, 2022

Location: The Palms Beach Hotel - Kuwait

Investment per delegate: US\$ 1545.00

## **How to Register**

By Phone : 1824824 By Fax : 2225-2119

By Email: Info@think-cycle.com
