

Yireh® Care Ultra Powder <-----> Yireh® Care Ultra Liquid

Product Description: **Yireh Care Ultra** medicines are non-prescription, now patented, proprietary, **Powder** and **Liquid** formulations that are applied topically and provide multiple mechanisms of action supporting the "6 Key Wound Care Effects" (see below) simultaneously, rapidly, and safely for a wide variety of wounds, bleeds, and localized infections and contamination. They have no known side effects or allergic reactions, no gauze, no chemotoxicities, no cytotoxicities, no enzymes, and no caustic effects.

Applications: To support the care of soft tissue and osteo tissue wounds; major / deep dermal or minor / shallow, sub-cutaneous, or muscle and bony tissue areas with suspected or actual contamination or severe / gangrenous / highly resistant infection; areas of bleeding; both high (dry) viscosity (**Yireh Liquid**) wounds and low (wet, draining) viscosity (**Yireh Powder**) wounds.

Yireh Powder and Liquid Support 6 Key Wound Care Effects:

- 1) Localized Bactericidal effect - Without tissue cytotoxicity.
- 2) Localized Angiogenesis effect - Supports creation of new circulatory pathways (neovascularity), important in diabetes and compromised extremities.
- 3) Localized Hydration effect - Immediate tissue-to-surface fluid migration from sub-wound tissue to all of wound area.
- 4) Localized Auto-Debridement effect - Very little need for surgical debriding. **Yireh** supports lifting thickened eschar for easy irrigating and flushing away of slough. **Yireh** does not create a secondary wound over the primary wound as surgical debriding typically does.
- 5) Overcomes Localized Ischemia - Supports reversing necrosis of tissue cells and supports rapid restoring of complete vitality in the affected area(s).
- 6) Localized Nerve Rejuvenation effect - Supports restoration of nerve function and feeling in previous diabetic numbness and total loss of feeling.

- **Apply Yireh Powder or Liquid** topically twice daily to affected area(s), saturating and covering all surface area(s) with approximately 1/8" (3.2mm) depth. **Powder** and **Liquid** may be applied together for optimal consistency. If rapid absorption is observed, more frequent applications may produce faster results.
 - **Yireh Care Powder** is for low viscosity (wet / draining) localized conditions.
 - **Yireh Care Liquid** is for higher viscosity (dry) localized conditions. Please note: The viscosity of **Yireh Liquid** may be lower (i.e., runnier) than expected, in order to easily penetrate into affected areas. Thus, when applying to vertical or down-facing areas, position the affected area horizontally facing up as much as possible, and hold the Liquid squeeze tube horizontally to apply evenly.
- There are no known side effects, allergic reactions, or drug-drug interactions with **Yireh Powder** or **Liquid** when used as directed. Avoid contact with eyes, and on an open wound do not rub in.

To order **Yireh® Care Ultra Powder or Liquid:**
