

EXTENSION CARE

Welcome to the exciting
world of extensions!

After Application

For tape or keratin bonds wait 48 hours to wash or chemically process your hair after installation.

No wait period for Hand Tied or beaded I-Tip Methods.

Every Day

Brush hair 2-3x a day with a Boar Bristle Brush. Be sure to work brush inbetween the bonds and remove any matting as soon as possible.

Washing

Wash hair with a sulfate-free shampoo and conditioner, no more than 3x a week.

After wetting hair, gently apply shampoo to the root area and lightly massage between all wefts and bonds to remove any residue and/or oil build up. Do not scrub vigorously. Rinse thoroughly.

Condition the ends of hair and use a hydrating masque 1x a week.

Styling

Always dry hair thoroughly after shampooing. Use heat protecting products on your hair such as Redken Quick Blowout spray.

For Tape and Keratin Bonds avoid using oil and alcohol based products near the bonds. Do not overexpose bonds to heat while thermal styling.

Finish ends of hair with oil to keep them hydrated and use dry shampoo to extend shampoos.

Activities

It is not recommended to get your extensions in ocean or pool water. If you must, please wet hair and apply conditioner to seal your hair and secure it in a ponytail or braid.

Make sure to wash hair very well immediately afterwards to remove any chemicals/sweat/residue.

Sleeping

Never go to sleep with wet or loose hair. Before bed, brush hair to detangle and gently tie into a loose ponytail or braid with a scrunchie.

Sleeping in a silk bonnet and/or with a silk pillowcase will help extend the lifespan of your extensions.

Do not hesitate to contact us with any questions. If matting or discoloration has happened to your extensions please book an appointment for us to assist you!
