

HIGH LUMEN CONSULTING IS HOW...

CISOs at financial services companies build or transform their Governance, Risk & Compliance organization (GRC) into a high performing, value-add capability that identifies risk early and mitigates it decisively.

It's about getting hands-on guidance from an expert who's built, launched and led effective GRC and cyber risk capabilities at top-tier companies.

Hyperproof's research found that a company without a mature, unified Governance Risk & Compliance function is roughly **1.7 to 2 times more likely** to suffer a data breach than one with an integrated GRC program.

What does it take to protect your company from a data breach?

Four things...

1

Illuminate | **Risk**

Start with a Baseline Risk & Effectiveness Assessment for your GRC or TechRisk function

2

Illuminate | **Revamp**

Develop an Improvement Strategy, prioritize key improvements then execute the strategy and refine it as you go

3

Illuminate | **Results**

Schedule a post-improvement reassessment after key improvements are implemented

4

Illuminate | **Refresh**

Schedule an annual consult to review your GRC program and identify new opportunities

Only High Lumen Consulting takes this Illuminate | TechRisk Revamp approach so that companies get more value out of their GRC organizations.

Industry research shows that companies with strong, integrated GRC functions are half as likely to fail compliance audits, miss high severity risks and experience a data breach.

Ready to strengthen your Governance, Risk & Compliance?

Schedule a free 45-Minute Risk Strategy Session today!

We Strive to Solve Problems for You

Testimonial

Latisha is a strong cyber/tech risk partner who consistently translates security and control requirements into practical actions the business can execute. In high-pressure situations, I've seen her align stakeholders quickly, surface the real risks and gaps, and drive clear remediation plans to completion. She builds trust across teams by communicating in business terms while still maintaining the rigor needed for effective controls. I'd recommend Latisha to any organization looking to strengthen its risk posture without slowing the business down.
