

RxAir360

NEWSLETTER

Hello RxAir360 Family,

We apologize for the delay in sending the April Newsletter. We hope that you enjoyed your Spring Break, Easter weekend, and getting your taxes filed. While you were having fun, we were diligently continuing our work with ArentFox Schiff attorneys on finalizing the paperwork that will be provided to everyone THIS WEEK. RxAir360 Inc. will hold a Zoom call on Monday, April 24, 2023, at 7:30 PM EST to review everything and answer any questions. The lead attorney for our project and Partner at AFS (Warren Seay) will be available. Following the call, we will send the link for the new documentation to be signed.

RxAir360

clinical hyperbaric oxygen device

The Latest

The next round of funding will consist of accredited investors with a minimum share purchase amount of \$50K. As our corporate team is vetting worldwide prospective investors there is a strong likelihood that we will be fully funded sooner than expected.

There has been enormous attention surrounding the construction of RxAir360. The Corporate Team is in the process of evaluating new Engineering and CAD partners to decide who will work with the 3D-Printing company to build our prototype.

Keep in mind that this is something that has never been done, we are FIRST, and we are excited to be first. When working with engineering and development, we expect changes in our timeline as we do our best to stay on schedule.

Hence, we are approximately two months behind in our timeline. We are confident that the construction of our device will be executed with the right team that understands the vision of RxAir360.

Validation

We continue to bring you validation of the power of HBO and how it is helping patients and saving lives.

12 year old saves leg with HBO Treatments - Great news for our CARE program!

https://www.linkedin.com/posts/hipertech_hbot-remains-to-be-the-hope-of-children-activity-7038797051899375617-k7uN

Report specifying that radiation necrosis, that codes for all insurance programs using HBO, will increase to 30,000 cases per year in the USA. No revenue currently for physicians with these patients using HBO
