ITAC SecureFile® Cloud Service

ITAC SecureFile® Cloud Service is the most versatile service to satisfy enterprise secure file transfer needs. It adjusts to any organization and does not require acquisition of infrastructure, just pay per use.

Security

- Use semantic security for controling access to files: Access them only within business hours and selected dates, from selected IP address, control the number of downloads per file, etc.

- Secure deletion of processed files.

- File Usage level control: Editing, reading, and sharing.

- Auditing: Files and users activity log.

- Advanced security policies: Password, access, and transfer policies

Governance

- File availability notification by e-mail to users or teams.

- High reliability and scalability.

- Transfer large files without IT support.

Automation

- Automatic and robust File Encryption.

- Customized User interface: Use your corporate branding for web access and notifications.

- Automated management of encryption keys and digital certificates.

- Automatic file expiration.

Traditional file storage solutions in the cloud does not provide security. These mechanisms introduces new security risk for organizations such as leak of information due to the lack of visibility and effective access control related to those who are authorized to access sensitive information.

With **ITAC SecureFile® Cloud Service**, companies can exchange files in a secure way, since any place, fast and easy.

ITAC SecureFile® Cloud Service

Secures file exchange between individual employees, and organizational work teams, external collaborators, business partners and customers.
