

Solution Architect -full time, hybrid

Location: Downtown Toronto

This role involves:

- Collaborating with various business units
- Working with the implementation team
- Design, build, and maintain to meet business needs

This role will ensure efficient and effective use of **Anaplan** across the organization and contribute to continuous improvement of our planning processes. Partner closely with stakeholders to understand evolving business needs, ensure alignment of Anaplan solutions to enterprise strategy, and contribute to ongoing transformation and innovation in planning processes.

You will also:

- Support the development and maturity and advise on operating model design and enable both technical and functional enhancements across planning models and the overall solution landscape.
- Collaborate with business stakeholders and implementation partners to understand business processes and requirements, translate them into functional specifications and use cases, and craft well-designed Anaplan models using the Anaplan Way methodology.
- Design and build connected Anaplan solutions, including architectural recommendations, module development, UX enhancements, data integrations, and reconciliation processes that support complex business planning needs.
- Conduct root-cause analyses to resolve system issues, lead updates to existing models to incorporate changing requirements, maintain data integrity, manage access controls, and monitor overall system performance.
- Oversee and execute thorough testing of Anaplan models to ensure accuracy, robustness, and reliability.

Requirement:

- 3+ years of hands-on experience building, maintaining, and optimizing **Anaplan** models, with strong knowledge of the **Anaplan** Way methodology.
- Demonstrated experience in data analysis, data management, and integrating data from multiple systems using modern integration tools and techniques.
- Strong analytical, planning, and problem-solving skills with the ability to translate complex business needs into well-structured model designs and functional requirements.
- *Bonus* if you have Anaplan certification (e.g., Certified Master Anaplanner)

What's in it for you?

- A rewarding career path with diverse opportunities for professional development
- A competitive rewards program including bonus, flexible vacation, personal and sick days, and comprehensive benefits that start on your first day.
