HIRING

Full time: Java Developer
100% work from home

We are seeking a Software Developer with a passion for building amazing software and integrating software components into our informatics platforms. If you are looking for a multidisciplinary team of researchers and engineers who work in a dynamic and agile environment then this is your next career move!

You will have the opportunity to:

- develop your skills in data handling, software implementation, and system integration.

- designing, implementing, deploying, testing, and maintaining essential software components that will aid in growing our informatics platforms.

- work with a group of talented developers and technical staff to develop the pipelines that bring multidimensional data from a large variety of sources into the data platforms

- play an active role in evolving our products, processes, and data technology.

Qualifications:

A Java Developer who is capable and comfortable in a polyglot environment and:

- Min 4 years in a mid-sized Software team with a strong focus on end-to-end product development process, including release planning, change control, testing, deployment, and the final product release.

- Min 4 years of Java & Python development combined

- Strong working knowledge of modern architectural patterns or styles, Spring boot Microservice in particular.

- Knowledge of best practices and IT operations in a high-availability environment

- Strong troubleshooting and problem solving skills

Do you have lots of passion for developing and integrating software components into our informatics platforms? You should apply! Elena@futuretek.ca
