

# **SANITARY SEWER PIPING REQUIREMENTS**

## **GRINDER PUMP STATION TO BUILDING**

**The property owner shall connect the residences gravity sewer line from the residence to the new Grinder Pump Station. The Townships contractor (Rohde Bros. Excavating, Inc.) will leave a 4" PVC stub out from the station to connect to. The system cannot be put into operation until this connection is made.**

**The piping from the residence to the Grinder Pump Station must be watertight and only include sanitary waste. No rain or storm water is allowed in the sanitary sewer system.**

**If a clean out is installed it must stick up above the ground 18" and be marked with a metal fence post or steel pipe 36" above grade.**

**All properties with sanitary systems must connect to the system. If the existing septic field is removed during construction an immediate connection to the new system is required.**

**Construction and a permit is required in accordance with Arenac County Plumbing requirements.**

- 4" PVC / SCH 40 Pipe**
- #12 Sewer Tracer Wire from Grinder Station to Clean Out to House**
