## Optimal Patient Outcomes

**Prioritize Your Wound Care,  
Starting Today**

Call **229-322-1813** to schedule  
your in home appointment

### Awareness

Patients who actively participate in their wound care are up to 30% more likely to experience faster recovery. Studies show that comprehensive wound care programs can reduce the risk of amputation by up to 50%

### Chronic Wounds

Chronic wounds are wounds that fail to heal within a normal timeframe, typically persisting for more than six weeks. These wounds often result from underlying conditions such as diabetes, poor circulation, or prolonged immobility, and can lead to severe complications if not properly treated.

### Pressure Ulcers

Pressure ulcers, occur when prolonged pressure restricts blood flow to the skin and underlying tissues, leading to tissue damage. They often develop on areas of the body where bones are close to the skin, such as the hips, back, heels, and elbows. People with limited mobility, especially those confined to beds or wheelchairs, face a higher risk.

Our medical team will conduct a comprehensive wound evaluation to create a tailored and intensive treatment program to heal your chronic wounds.

**Call Now 229-322-1813**

It is estimated that up to 60% of chronic wounds become infected, increasing the risk of severe complications

**Contact Mobile Wound Care  
for all of your patients needs.**

We are an organization that is patient driven and always put the patients needs first

Our Advanced wound care incorporates the latest technologies designed to improve recovery and reduce complications in patients with chronic or complex wounds. Treatments like amniotic wound grafts and collagen fish oil products that promote faster tissue regeneration, reducing inflammation, and enhancing oxygen delivery to damaged areas.
