

It is important to abide by the CDC's recommendations when it comes to protecting your workforce from "COVID-19" and any other harmful viruses that can cripple your business. Atlantic Response, Inc. uses planning and approved methods with the most effective technology to remove these potentially harmful viruses from your workspaces.

Planning...

- We can assist you with determining what needs to be addressed based on your specific needs.
- Prioritize frequently touched surfaces.
- We will coordinate with your existing cleaning crew or janitorial staff to clean visibly dirty surfaces with soap and water and disinfecting them prior to decontamination by our team.

Approved Methods...

- Close off areas where sick employees have worked until decontamination can occur.
- Limiting direct contact with infected surfaces is key to preventing the spread of any virus.
- Personal protective equipment is our last line of defense and should not be the only method for keeping us healthy.

Effective Technology...

- Our electrostatic sprayers, filled with an EPA-Approved Solution, are designed to save time and labor, spray less liquid, and cover more surfaces than traditional pesticide foggers. They provide an electrical charge to solutions, allowing them to wrap conductive surfaces with an effective and even coverage.
- The use of ultrasonic waves, high intensity UV radiation, and LED blue light against the virus that causes COVID-19 are not known.

We can also help you with waste disposal if needed.

Available 24 hours a day, 7 days a week to assist you
