

SuperBroadband

A new era of business internet

It's time to take business internet to new heights

Powered by America's fastest 5G network, integrated with Starlink, SuperBroadband reaches every zip code in the U.S. It's the first nationwide broadband solution built from the ground up and the sky down.

Connecting every location you operate with business internet is challenging. For each location, you not only need to find a provider, but also a second provider if you want to ensure backup access. Managing multiple contracts puts a strain on your IT team. SuperBroadband fuses T-Mobile 5G and Starlink connectivity into one managed multi-access network solution to bring business internet where you need it.

Ultimate redundancy

Integrated 5G + Starlink keeps critical operations running through virtually all outages and disruptions—delivering true business continuity.

Unmatched coverage

Nationwide 5G plus Starlink connects virtually every location, including remote areas, so your business can operate anywhere.

Unprecedented simplicity

Fully managed by T-Mobile with one provider, one contract, and one bill—so you don't have to design, deploy, manage, or support it yourself.

Reliability. Coverage. Continuity. All from one partner.
