

## Rotary Accumulator Turntables

Turntables are used not only for empty and full bottle management in filling lines but also for accumulation of many types of products in a host of packaging and manufacturing systems.

## Stainless Steel Turntables

*Turntable height is 850 mm adjustable to 950 mm*

*Option: Rotary Turntable with Stationary Rim*

*The rotary disk measures 1000 mm across. ( Option larger sizes available)*

*Accumulation Turntable allows you to have a buffer for your manual packing operations*

---

## WHAT DOES THIS MACHINE DO?

Baumann Rotary Turntables can dramatically improve the efficiency of your production. Accumulation Turntables promote more efficient packing of finished goods into shipping cases. They are made of 304 stainless steel for durability in your production environment. They can be customized to suit particular applications by adding bottle-guide railing options.

Baumann Turntables, either as a stand-alone machine or integrated with another component,

---
