

MASTER OF EDUCATION (INSTRUCTIONAL TECHNOLOGY)

KPT : N/141/7/0005 MQA : PA10839

PART-TIME FULL-TIME

Supported by:

The introduction of the Master in Education (Instructional Technology) program would enable the younger and working knowledge generation to be equipped with educational activities and capabilities to cater to the demands for expertise and professionals in the market. The demand for skilled workers and experts in the education world is expected to escalate in the coming years. The Master of Education program is designed especially in management skills to develop students' individual skills necessary for solving educational problems, teaching management, supervision, administration, institutional leadership, community, and meet school system needs and expectations. The role of research and development in the social studies is important for the perpetuation of human knowledge as well as the development of our nation. Research in educational management, instructional design and motivation has produced many applications to help solve problems in these fields. For Malaysia to attain the status of a developed nation, effective development in research of education and humanities is imperative.
