ABOUT POLYCARBONATE

We would like to share the key advantageous features of the polycarbonate material we use in nearly all our products.

UNRIVALED IN THE INDUSTRIAL HORECA SECTOR

IMPACT RESISTANCE

Polycarbonate products are the most durable and long-lasting items you can use in the Horeca sector, known for its intensive use environments. With superior shatterproof properties, they last nearly ten times longer than other plastic alternatives or glass products.

WASHING PERFORMANCE

Polycarbonate products can be easily washed in both industrial and household dishwashers. Standard washing temperatures and widely accepted branded detergents do not harm our products. Based on 30 years of industry experience, user feedback, and corporate testing procedures, we can confidently state that our products have a washing lifespan of up to 1,500 washes under normal usage conditions.

HEAT RESISTANCE

Compared to other plastic alternatives, polycarbonate material has far superior heat resistance. It can be used seamlessly at temperatures ranging from +120°C to -40°C.

PHYSICAL AND CHEMICAL ADVANTAGES

Polycarbonate is a highly transparent material with excellent light transmission, making it almost indistinguishable from glass products in appearance. Thanks to its superior insulation properties, it minimizes temperature transfer, keeping beverages cooler for longer compared to glass, metal, or disposable plastics. It is safe to use with carbonated and high-alcohol beverages without deforming. However, beverages containing anise can rapidly degrade polycarbonate, rendering it unusable. Do not use with anise-based drinks.

USER SAFETY

Polycarbonate glasses are primarily preferred in areas where glass poses safety risks for users. For example:

- Pool and beach areas of resort hotels
- Parties and festivals
- Stadiums and sports events
- Yachts and boats
- Schools and elderly care facilities

They help prevent accidents and injuries caused by broken glass in these environments.

ENVIRONMENTAL IMPACT AND ECONOMIC ADVANTAGES

In today's consumer-driven societies, efficiently and sustainably utilizing resources is a shared responsibility for all individuals and organizations.

Compared to glass products, polycarbonate glasses have an average lifespan ratio of 1:6. This means that the lifespan of **1 PC glass** equals the use of **6 glass items**, significantly reducing carbon emissions associated with energy-intensive glass production.

In comparison to disposable items, a **50g polycarbonate glass** replaces approximately **15kg of plastic waste** over its lifetime, compared to using **10g disposable cups**.

For example: An operation with 100 polycarbonate glasses generates **5kg of waste** at the end of their lifecycle, while attempting the same with disposable products would result in **1.5 tons of plastic waste**.

From an economic perspective, the cost comparison is clear:

- 1 PC Glass 0,60 USD = 6 PC Glass Cup x 1,10 USD **Total Cost** 6,60 USD
- 1 PC Glass 0,60 USD = 1500 PC Disposable Cups x 0,025 USD **Total Cost** 37,50 USD

WARNING! Anise degrades polycarbonate products, so do not use them for serving Raki, Ouzo, Pastis, or similar anise-based drinks. They are compatible with all other alcoholic and non-alcoholic beverages.
