Product Information:

To improve the quality of monoclonal antibodies for research purpose, ZXBio develops novel cell culturing technologies to grow hybridomas/CHO cells in serum-free condition. This method is superior to traditional ascites production method, which always contaminates the purified antibodies with host proteins. Using affinity purification, ZXBio is able to purify monoclonal antibodies at a purity higher than 95%.

Anti-Mouse IgM Monoclonal Antibody [AF6-78.25.4] specifically binds mouse B cell membrane IgM surface antigen.

Application Notes: For research use only, Not for use in diagnostic procedures.
