

RAIN BARRELS: INSTALL TIPS

1. Place rain barrel on a flat, raised surface to allow gravity to help with the water flow. Cinder blocks or a wooden stand are simple, inexpensive options for elevating your rain barrel.

2. Position the rain barrel under gutter. The screen on top of keeps insects and debris out of your barrel. You may need to:

- Add a flexible adapter piece
- Use a hacksaw or tin snips to cut the gutter to the correct height 
- Add a curved flexible adapter to direct water into the barrel.

3. Direct overflow tube away from foundation.

4. Save water while nurturing your plants. Use rain barrel water on flowers, trees, shrubs & non-edible plants. Every drop counts!!
