

How to Deliver Medications for Pharmacies

1. Obtain your Pharmacy Technician License for the State in which you reside.

For the State of Georgia (Georgia Board of Pharmacy) - visit [Georgia Board of Pharmacy](#)

- a. Click on "Apply online"
 - b. Open an account
 - c. Fill out **Pharmacy Technician Application Supplement Packet** (you can go under applications and forms) - \$100 at the time of this writing
 - d. For the State of GA, I took my application to the 11th Floor of the address of the application - Georgia Board of Pharmacy 2 MLK Jr. Drive, SE, 11th Floor East Tower Atlanta, GA 30334 (didn't trust mailing the application)
 - e. The notary was free at this location
 - f. The employees will help you to sign up for the location nearest you to get your fingerprints and background check (there was a small fee)
 - g. I obtained my Pharmacy Technician's License in about two weeks by email
2. Obtain your Bloodborne Pathogen License (got mine for \$9.99 from the National CPR Foundation online; short quiz at the end which is easy). There is also the American CPR Care Association (\$9.95). You'll receive your card in the mail for a keychain and for your wallet
 3. Obtain your courier license (optional) - [Home - Integrity Medical Courier Training, Courier Certification Training - Therapak](#)
 4. Ensure you have a clean driving record
 5. Don't mind driving, choose a shift
 6. Track your mileage for tax purposes
 7. Investigate companies that you would like to work for – I'll give you a short list - [Drive For Us » SDS Rx](#), MedZoomer.com, Dropoff.com
 8. Register with local and hospital pharmacies in your area in which to work/contract
 9. I suggest purchasing at least two sets of scrubs. Scrubs are a sign of "authority" and people don't generally bother individuals wearing them because it is assumed they are in the medical field. I have blue scrubs. A family member of mine also has a lab coat.

That's all folks!!! 😊
