

# TALA™ Finger Sizer

**Step 1** Print this file. Make sure "scale to fit" is turned off / not selected. You want to print this document at 100% size.

**Step 2** Check that the document printed at the correct size by laying a penny, a nickel, a dime or a quarter down on top of its matching printed version. If your coin is noticeably larger or smaller, the print size is not correct and you will need to adjust your print settings and print again until you get a size match.

**Step 3** Once the print size has been confirmed as accurate, lay your finger over the sizing ruler below to determine what size TALA you need. Make sure to take your measurement at your knuckle as shown below. This finger knuckle example measures  $\frac{3}{4}$ ".
