BELUGA

The Beluga sturgeon or Huso Huso is the largest sturgeon species known to man living to over a 100 years old. Endemic to the Ponto-Caspian sea region, Beluga's are found in the Caspian Sea, Sea of Azov and the Black Sea.

After reaching their mature age at 22 years our experts harvest the caviar and then carefully select the highest quality roe. From the farming process to the harvest our experts make sure to respect traditions of our ancestors.

Beluga caviar has a beautiful large sized roe unlike any other species. It comes in a light smokey gray colour and has a unforgettable flavour profile that is far superior to other varieties, a perfect blend of texture, creaminess and a slight nutty flavour.

*All priorly stated prices are in USD

*All items listed are subject to availability
