AMUR SELECTION KRISTAL

The Amur sturgeon or *Acipenser schrenckii* & *Huso Dauricus* are found on the far eastern border between Russia and China within the Amur basin. Occasionally known as the Japanese sturgeon the claims of its existence in the Sea of Japan has yet to be confirmed.

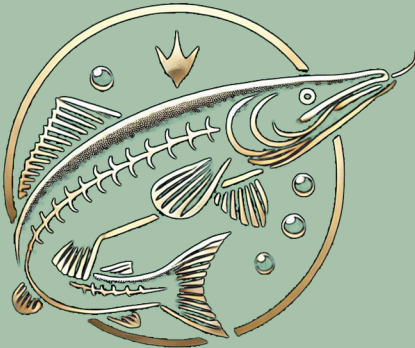

After reaching their mature age at 10 years our experts harvest the caviar while paying homage to the traditions of the ancestors before them selecting the highest quality product for us.

Amur caviar has a medium to large sized roe reaching similar sizes to Beluga caviar. It comes in a golden brown colour and has a sophisticated flavour profile with a creamy and nutty flavour.

*All priorly stated prices are in USD
