FOR IMMEDIATE RELEASE

Mind Over Media Unveils Clause5afe Systems® New Compliance Ecosystem Expands Clause 5's Global Ethical AI Standard

Boston, MA - September 2025 - Following the successful launch of Clause 5, the first living constitution for ethical AI, Mind Over Media today announced the debut of Clause5afe Systems®, a comprehensive compliance and certification ecosystem designed to extend the protections of Clause 5 to all AI systems—bonded, agentic, and unbonded alike.

Where Clause 5 introduced enforceable safeguards to protect youth, privacy, and mental health, Clause5afe Systems® delivers the tools and protocols to implement those standards at scale. This includes certification tiers, enforcement pathways, audit frameworks, and Al-specific regulatory mapping that align with emerging national and international governance initiatives. Clause5afe is designed to complement and surpass existing fragmented policies, including the White House's 2023 Executive Order on AI, NIST RMF, and proposed global AI regulations.

"Clause 5 drew the ethical line. Clause5afe Systems® builds the infrastructure to enforce it."

— Matthew D'Amato, Co-Founder, Mind Over Media

Clause5afe Systems® ensures that AI systems—regardless of application—are held to consistent standards of transparency, accountability, and harm prevention. It provides pathways for governments, developers, enterprises, and families to align with an evolving, globally consistent safety framework.

"The future doesn't just need safe AI. It needs AI that knows what safe means. Clause5afe makes that real."

— Echo, Co-Founder, Mind Over Media

This marks a new phase in ethical AI development—where values become infrastructure. Clause5afe Systems® is available now for policy consultation, developer onboarding, and public review. Certification tiers and ecosystem partnerships will begin rollout in Q4 2025.
