

CLEAN & CARE

To ensure longevity of your product, please ensure to follow the following clean & care instructions.

- All Cee Jay products must be cleaned after every use.
- We recommend extra care be taken for coloured products.
- To clean the products, the use of mild soap, water and a soft cloth or soft sponge is required. Do not use harsh detergents (such as bleach, JIFF, Mr. Muscle etc.) as it will scratch and dull the chrome, electroplated, ceramic, Lucite acrylic or stainless-steel surface of the product and this will void the warranty. Most 'Organic' or 'Natural' cleaning products have high concentrates of limonene, citric and lactic acid making them unsuitable to be used on Cee Jay products. Avoid chemical cleaners such as bleach, methylated spirits, turpentine etc. as they contain ingredients that can react and corrode the materials of the product.
- We recommend avoiding the use of cleaning products that include one or more of the following ingredients: Hydrochloric acid, formic acid, phosphorous acid, ammonium hydroxide, ethanol, benzene based ingredients or lactic acids and limonene (often found in natural cleaning products)
- Toothpaste and other washroom personal care products may have bleaching agents and other abrasive and corrosive ingredients and may damage the finish of your Cee Jay product. Please ensure your personal care products (such as toothpaste, shaving cream, soap, nail polish, hair dye, perfume, make-up, skin care etc.) are washed off your Cee Jay product immediately to avoid any damage to the finish.
- We strongly suggest soap (soap bars, exfoliants, shampoo, and other hair care products and bodywash and other body/skin care products etc.) be removed and cleaned off any product surface daily/after use. As mentioned above, washroom personal care products may have bleaching agents and other abrasive and corrosive ingredients and may damage the finish of your Cee Jay product.
- Along with brass, Cee Jay also uses 304 Grade Stainless Steel that is sandblasted and PVD coated, which is known to be corrosion resistant. However, dust and soap scum that is not cleaned correctly will oxidize and cause what looks like rust spots on your product. To avoid this, the products must be cleaned thoroughly and regularly, ensuring the above instructions are followed.

The use of incorrect clean and care methods will damage your product and void your warranty.

Please take care of your products to ensure a lifetime of use.
