

JIGS AND PRETREATMENT

To help get the best out of your UV desktop printer we have a range of services to help you achieve the optimal results. This includes our Jig making facility, we manufacture jigs based on optimal production output.

Our jigs are available in a range of materials and can be CNC cut, laser cut or 3D printed depending on the material, the product and desired material.

We also offer a range of solutions for improving adhesion.

Our products include wipe on printers, hand held and automated plasma pre-treatment systems.
