**Currently Unavailable**

It is VITAL to comply with the Tile Council of North America guidelines for glass tile installations. Failure to adhere to these guidelines can lead to severe tile damage such as cracking and shattering. All pool and spa installations must include expansion joints to accommodate the inherent quality of glass to expand and contract due to fluctuations in temperature.

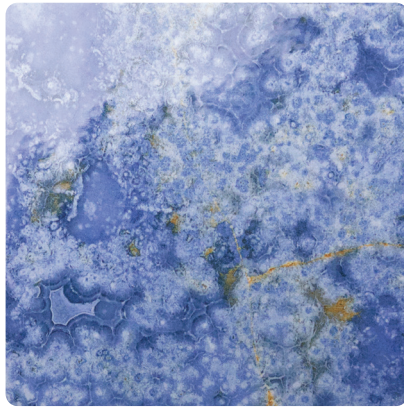

Sizes and shades may vary due to the unique quality of glass tile products. The minor differences in the tile highlight their handcrafted quality and bring an added value to your pool or spa.
