

Launch Energy Solutions

(formerly Wellington Ventures)

Introduction Package

Launch Energy Solutions

Who are we?

- **Wellington Ventures specializes in providing turnkey, independent project development and acquisition due diligence services across power generation resources.**

**First Project
Developments:
2007**

**Established Mexico-
based Development
Team:
2017-2020**

**Established as
Trusted, Independent
Industry Partner:
2020**

**Rebranded
and
Expanded:
2024+**

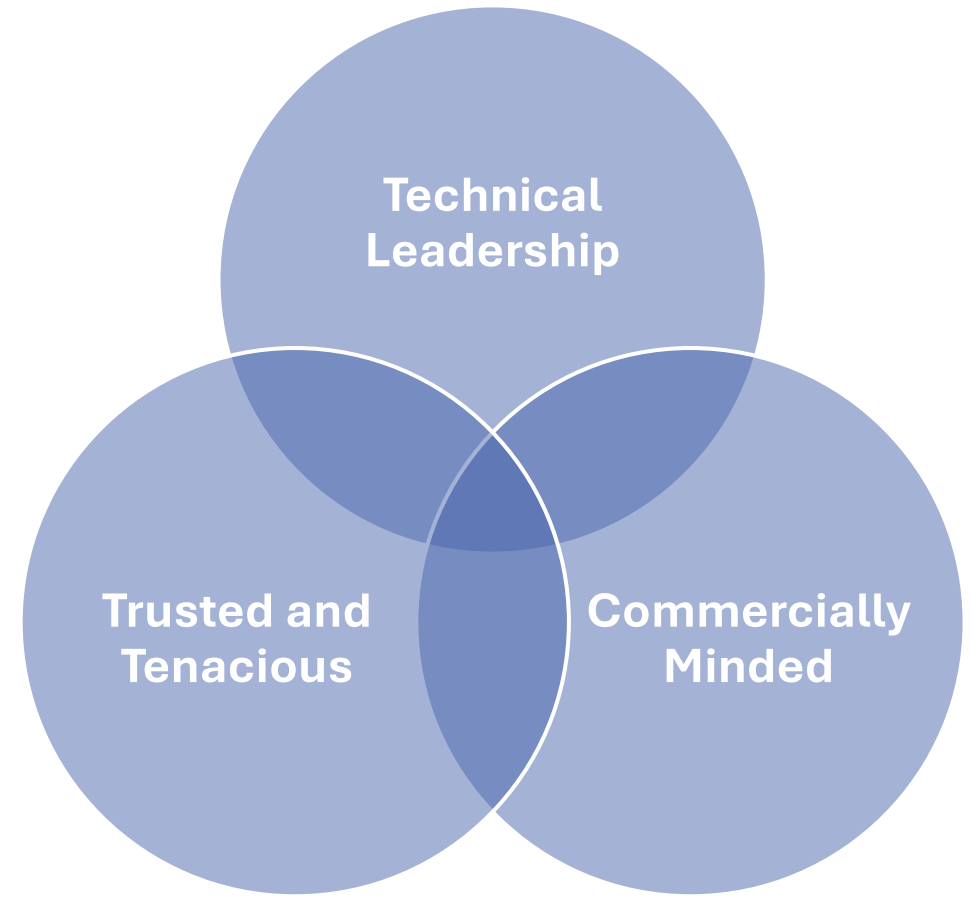

Background

- Professional engineer with 19+ years' leadership experience in infrastructure project development with budgets from \$1M to \$50M, for projects up to \$7 billion
- Technical Project Director for Genesee CCS project, a \$2.5B, 3+ MMTPA carbon capture facility through Feasibility, Pre-FEED and FEED
- Project Manager for 600-700MW, Alberta-based SMR development project
- Led development of novel 3GWh energy storage project (1.5B USD) in California including: development of Pre-FEED scope, schedule and cost estimate, regulatory/permitting/ environmental strategy, commercial optimization, and construction contracting strategy
- Conducted commercial and technical due diligence for over 1B CAD of solar, wind and cogeneration projects, including management reviews and recommendations
- Project manager on development of 1.8GW of NGCC power plants in Mexico, including technical/commercial optimization, EPC negotiation, and regulatory/enviro review
- Developed, recruited and coached a high performing project team developing power, pipeline and gas processing projects across Mexico and Latin America

How We Operate

- We act as Owner's Developers
- For large entities needing specialized expertise
- For smaller entities needing trusted and experienced leadership
- Unbiased project development leadership means no conflicts, no vested interest for post-development scope

Recent Successes

- Client: **Capital Power Corp.**
 - Successful execution of Feasibility, Pre-FEED and FEED engineering studies for 4.2 MTPA carbon capture and storage (CCS) project on a natural gas combined cycle power facility
 - Led teams completing all aspects of technical design and optimization, host plant integration EPC negotiations and commercial optimization, delivering full scope on time and under budget
- Client: **Capital Power Corp. (CPC)/Ontario Power Generation (OPG)**
 - Lead CPC's project management team for a \$14M feasibility study looking at installing Alberta's first nuclear facility – a small modular reactor (SMR) design targeting 600-700MWe
 - Co-led technical efforts on site selection and screening, and reactor technology selection
- Client: **Northern Alberta Institute of Technology (NAIT)**
 - Instructor for multiple Carbon Capture, Utilization and Storage classes across two full cohorts of NAIT's successful Clean Energy Upskilling courses
 - Consisted of teaching professionals of all ages in Carbon Capture Development, CO₂ Utilization and Storage Development, Carbon Capture Operations and CO₂ Utilization and Storage Operations
- Client: **Confidential, US-based Power Producer**
 - Executive advisor supporting very large megaton-scale CCS project through FEED, value engineering, and commercial optimization efforts

What Do Our Clients Say?

“I was very impressed... always very knowledgeable and poised. I always had a lot of confidence in your positions”

- SVP, Large IPP

“Amazing to work with... Your tactful honesty is a breath of fresh air”

- Mgr, Gas Projects

“[They] brought innovative solutions and meticulous attention to detail, overcoming complex challenges and fostering a collaborative environment that exceeded our expectations. I highly recommend James!”

- Director, Carbon Mgmt. Large IPP
